BILLING CODE 4410-18-P

DEPARTMENT OF DEFENSE

Department of the Army; Corps of Engineers

Intent to Prepare a Draft Environmental Impact Statement for the Neuse River Basin Feasibility Study, NC

AGENCY: Department of the Army, U.S.
Army Corps of Engineers, DoD.

ACTION: Notice of intent.

SUMMARY: The Neuse River Basin is the
third largest basin in North Carolina,
encompassing a total area of about 6,235
square miles. The Neuse River
originates in north central North
Carolina and flows southeasterly until it
reaches tidal waters of Pamlico Sound.
Water quality in the Neuse River Basin
has become degraded from multiple
causes, including: Rapidly expanding
urban growth with increasingly rapid
runoff from storm events; deforestation;
expanding high-density livestock
operations; and aging wastewater
infrastructure. Fish and wildlife
populations have suffered declines in
diversity and vigor; and waterborne fish
diseases have now become apparent,
especially *Pfiesteria*. The U.S. Army
Corps of Engineers, Wilmington District,
in cooperation with the State of North
Carolina Division of Water Resources
has initiated the Neuse River Basin
Feasibility Study in North Carolina. The
purpose of the feasibility study is to
develop and evaluate basin wide
alternatives to improve water quality,
restore anadromous fish passage,
wetlands, stream, riparian buffer, and
oyster habitat. We will also investigate
flood damage reduction. The focus of
this study is to identify resource
problems, needs, and opportunities and
develop solutions. The feasibility study
is being carried out under the Corps of
Engineers General Investigation Program
and is being conducted in response to
a congressional resolution adopted July
23, 1997.

FOR FURTHER INFORMATION CONTACT:
Questions about the proposed action
and DEIS can be answered by: Mr. Hugh
Heine; Environmental Resources
Section; U.S. Army Engineer District,
Wilmington; P.O. Box 1890;
Wilmington, NC 28402-1890;
telephone: (910) 251-4070.

SUPPLEMENTARY INFORMATION: This study
will investigate the following
alternatives: No action alternative,
restoration of wetland and stream
habitats as well as riparian buffers
which serve as natural filtering systems,
oyster habitat restoration, removal or
modification of low head dams and
culverts to restore anadromous fish
