Description: This regulation pertains to the safety requirements to be followed by the mine operators in the use of underground retorts to extract oil from shale by heat or fire. Prior to ignition of retorts, the mine operator must submit a written plan indicating the acceptable levels of combustible gases and oxygen; specifications and location of off-gas monitoring procedures and equipment; procedures for ignition of retorts and details of area monitoring and alarm systems for hazardous gases and actions to be taken to assure safety of miners.

Plans for operating retorts are required because the retort process involves the use of fire in an underground mine in which hazardous gases may be present. Approved retort plans are monitored by MSHA to ensure that combustible gases are kept at acceptable levels and do not expose the miners to explosive or other hazardous conditions.
