

Park, NC 27709, proposes to establish a tolerance for the combined residues of the fungicide prothioconazole and its desthio metabolite in or on food commodities soybean, seed at 0.15 parts per million (ppm), soybean, forage at 5 ppm; soybean, hay at 22 ppm. Bayer CropScience has submitted an analytical method for determining residues of concern in plants extracts residues of prothioconazole and JAU6476-desstio and converts the prothioconazole to JAU6476-desstio and JAU6476-sulfonic acid. Following addition of internal standards the sample extracts are analyzed by Liquid Chromatography/Mass Spectrometry/Mass Spectrometry (LC/MS/MS). Radiovalidation and independent laboratory validation have shown that the method adequately quantifies prothioconazole residues in treated commodities. The analytical method for analysis of large animal tissues includes extraction of the residues of concern, followed by addition of an internal standard to the extract. The extract is then hydrolyzed to release conjugates, partitioned and analyzed by LC/MS/MS as prothioconazole, JAU6476-desstio and JAU6476-4-hydroxy. The method for analysis of milk eliminated the initial extraction step in the tissue method.] This method is use to measure and evaluate the chemical residue(s).

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this Action Apply to Me?

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. Potentially affected entities may include, but are not limited to:

- Crop production (NAICS code 111).
- Animal production (NAICS code 112).
- Food manufacturing (NAICS code 311).
- Pesticide manufacturing (NAICS code 32532).

This listing is not intended to be exhaustive, but rather provides a guide for readers regarding entities likely to be affected by this action. Other types of entities not listed in this unit could also be affected. The North American Industrial Classification System (NAICS) codes have been provided to assist you and others in determining whether this action might apply to certain entities. If you have any questions regarding the applicability of this action to a particular entity, consult the person listed under **FOR FURTHER INFORMATION CONTACT**.

B. What Should I Consider as I Prepare My Comments for EPA?

1. *Submitting CBI.* Do not submit this information to EPA through regulations.gov or e-mail. Clearly mark the part or all of the information that you claim to be CBI. For CBI information in a disk or CD ROM that you mail to EPA, mark the outside of the disk or CD ROM as CBI and then identify electronically within the disk or CD ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

2. *Tips for preparing your comments.* When submitting comments, remember to:

- i. Identify the document by docket ID number and other identifying information (subject heading, **Federal Register** date and page number).
- ii. Follow directions. The Agency may ask you to respond to specific questions or organize comments by referencing a Code of Federal Regulations (CFR) part or section number.
- iii. Explain why you agree or disagree; suggest alternatives and substitute language for your requested changes.
- iv. Describe any assumptions and provide any technical information and/or data that you used.
- v. If you estimate potential costs or burdens, explain how you arrived at your estimate in sufficient detail to allow for it to be reproduced.
- vi. Provide specific examples to illustrate your concerns and suggest alternatives.
- vii. Explain your views as clearly as possible, avoiding the use of profanity or personal threats.
- viii. Make sure to submit your comments by the comment period deadline identified.

II. What Action is the Agency Taking?

EPA is printing a summary of each pesticide petition received under section 408 of the Federal Food, Drug, and Cosmetic Act (FFDCA), 21 U.S.C. 346a, proposing the establishment of regulations in 40 CFR part 180 for residues of pirimicarb in or on asparagus, hops, and leafy petioles subgroup. EPA has determined that these pesticide petitions contain data or information regarding the elements set forth in FFDCA section 408(d)(2); however, EPA has not fully evaluated

the sufficiency of the submitted data at this time or whether the data support granting of the pesticide petitions. Additional data may be needed before EPA rules on these pesticide petitions.

Pursuant to 40 CFR 180.7(f), a summary of the petition included in this notice, prepared by the petitioner along with a description of the analytical method available for the detection and measurement of the pesticide chemical residues is available on EPA's Electronic Docket at <http://www.regulations.gov>. To locate this information on the home page of EPA's Electronic Docket, select "Quick Search" and type the OPP docket ID number. Once the search has located the docket, clicking on the "Docket ID" will bring up a list of all documents in the docket for the pesticide including the petition summary.

New Tolerances

PP 2E6388, 2E6509 and 0E6102. Interregional Research Project Number 4 (IR-4), 681 Highway 1 South, North Brunswick, NJ 08902-3390, proposes to establish tolerances for residues of the insecticide 2-(dimethylamino)-5,6-dimethyl-4-pyrimidinyl dimethylcarbamate (9Cl) and its two carbamate metabolites: desmethyl pirimicarb and desmethylformamido pirimicarb, expressed as desmethyl pirimicarb in or on the following food commodities:

PP 2E6388 proposes to establish a tolerance for asparagus at 0.01 parts per million (ppm).

PP 2E6509 proposes to establish a tolerance for leafy petioles subgroup at 1.0 ppm.

PP 0E6102 proposes to establish a tolerance for hops at 4.0 ppm. The analytical enforcement method uses Gas Chromatography equipped with a thermionic nitrogen specific detector. Crop samples are macerated with methanol and then filtered. After filtration, the methanol is evaporated and the samples resuspended and partitioned with hexane and hydrochloric acid. The samples are left overnight to allow conversion of the desmethylformamido pirimicarb metabolite to the desmethyl pirimicarb metabolite. The hexane layer is discarded and the acidic aqueous layer is further partitioned with ethyl acetate. Sodium hydroxide is added to the aqueous layer and pirimicarb and its carbamate metabolites are extracted with dichloromethane. This method has been validated by an independent laboratory, with a limit of detection of 0.01 ppm.
