

interventions on marital stability and satisfaction and child and family well-being outcomes among low-income families. Primary data for the impact evaluation will come from three waves of in-person data collection. This collection is a baseline survey of

community members where CHMI demonstrations are operating, the first of three CHMI surveys. The impact evaluation will assess the effects of community healthy marriage initiatives by comparing family and child well-being outcomes in the CHMI

communities with similar outcomes in comparison communities that are well matched to the demonstration project sites.

Respondents: Community members aged 18–49 in three study sites and three comparison communities.

Proposed Information Collection Activity; Comment Request Proposed Projects

Title: Third Grade Follow-up to the Head Start Impact Study.

OMB No.: 0970–0229.

Description: The Administration for Children and Families (ACF) within the Department of Health and Human Services (HHS) is requesting comments on plans to implement a third grade follow-up to the Head Start Impact Study. This study will collect information for determining, on a national basis, how Head Start affects outcomes in the third grade for children who participated in the program as compared to children not enrolled in Head Start and to determine under which conditions Head Start works best and for which children.

The Head Start Impact Study was a longitudinal study that involved approximately 5,000 first-time-enrolled three- and four-year-old pre school children across 84 nationally

representative grantee/delegate agencies (in communities where there were more eligible children and families than can be served by the program). The participating children were randomly assigned to either a Head Start group (that could enroll in Head Start services) or a control group (that could not enroll in Head Start services but could enroll in other available services selected by their parents). Data collection for the study began in the fall of 2002 and extended through spring 2006.

It is the intention of the Administration for Children and Families to examine outcomes for this sample of children and families during the spring of the children's third grade year. Data will be collected in the spring of 2007 (for the four-year-old cohort) and the spring of 2008 (for the three-year-old cohort). The domains for development to be assessed include demographic characteristics of the children and families, as well as children's cognitive development, school achievement and adjustment, socio-emotional functioning, health and access to health care, and relationships with peers. Information will also be collected on parents' involvement in educational activities, mental health and well-being, and monitoring and other parenting practices, and information related to the characteristics and quality of the schools and classrooms that children attend.

Respondents: Individuals or households and school districts.
