

introduction of new predators and avian diseases; and (5) developing techniques to safeguard the species from extinction due to random catastrophic events.

The immediate goals of the draft recovery plan are to stop further declines in the range and composition of the nosa Luta population, develop safeguards to prevent the species from going extinct, and restore the population to at least the abundance levels estimated in 1982 (10,000 individuals). In addition to suggesting actions to address the immediate threats to the species, the draft recovery plan calls for research to determine the specific habitat requirements and life history parameters of the nosa Luta to inform long-term management decisions for the effective recovery of the species.
