3.1.4.4.3 Ducted heating-only heat pumps. The manufacturer must specify the Heating Full-load Air Volume Rate. Use this value when the following two requirements are satisfied. First, when conducting the H1 and H1<sub>2</sub> Test (exclusively), the measured air volume rate, when divided by the measured indoor air-side total heating capacity, must not exceed 37.5 cubic feet per minute of standard air (scfm) per 1000 Btu/h. If this ratio is exceeded, reduce the air volume rate until this ratio is equaled. Use this reduced air volume rate for all tests of heating-only heat pumps that call for the Heating Full-load Air Volume Rate. The second requirement is as follows:

a. For heating-only heat pumps that are tested with a fixed-speed, multi-speed, or variable-speed variable-air-volume-rate indoor fan installed. The second requirement applies exclusively to the H1 or H1<sub>2</sub> Test and is met as follows.

1. Achieve the Heating Full-load Air Volume Rate, determined in accordance with the paragraph a. of this section;

2. Measure the external static pressure;

3. If this pressure is equal to or greater than the Table 2 minimum external static pressure that applies given the heating-only heat pump's rated heating capacity, the second requirement is satisfied. Use the current air volume rate for all tests that require the Heating Full-load Air Volume Rate.

4. If the Table 2 minimum is not equaled or exceeded,

4a. Reduce the air volume rate until the applicable Table 2 minimum is equaled or

4b. Until the measured air volume rate equals 95 percent of the air volume rate from step #1, whichever occurs first.

5. If the conditions of step #4a occurs first, the second requirement is satisfied. Use the step #4a reduced air volume rate for all tests that require the Heating Full-load Air Volume Rate.

6. If the conditions of step #4b occur first, make an incremental change to the set-up of the indoor fan (e.g., next highest fan motor pin setting, next highest fan motor speed) and repeat the evaluation process beginning at above step #1. If the indoor fan set-up cannot be further changed, reduce the air volume rate until the applicable Table 2 minimum is equaled. Use the reduced

air volume rate for all tests that require the Heating Full-load Air Volume Rate.

- 144.2 Applicability.
- 144.3 Definitions.
- 144.4 Policy.
- 144.4 Responsibilities.
- 144.5 Procedures.

**Authority:** 10 U.S.C. 982

**§ 144.1 Purpose.**

This part implements 10 U.S.C 982 to establish uniform DoD policies for jury service by members of the Armed Forces on active duty.

**§ 144.2 Applicability.**

The provisions of this part apply to active-duty members of the Armed Forces.

**§ 144.3 Definitions.**

(a) *Armed Forces.* The Army, the Navy, the Air Force, the Marine Corps.

(b) *State.* Includes the 50 United States, U.S. Territories, District of Columbia, and the Commonwealth of Puerto Rico.

(c) *Active Duty.* Full-time duty in the active Military Service of the United States; Includes full-time training duty, annual training duty, active duty for training, and attendance, while in the active Military Service, at a school designated as a Service school by law or by the Secretary of the Military Department concerned.

(d) *Operating Forces.* Those forces whose primary missions are to participate in combat and the integral supporting elements thereof.

**§ 144.4 Policy.**

It is DoD policy to permit members of the Armed Forces to maximally fulfill their civic responsibilities consistent with their military duties. For Service members stationed in the United States, serving on a State or local jury is one

such civic obligation. Service members are exempt from jury duty, when it unreasonably would interfere with performance of their military duties or adversely affect the readiness of a unit, command, or activity.

**§ 144.5 Responsibilities.**

The Secretaries of the Military Departments, or designees, in accordance with regulations prescribed by the Secretary concerned, shall determine whether Service members shall be exempt from jury duty. This authority may be delegated no lower than to commanders authorized to convene special courts-martial.

(1) Interfere unreasonably with the performance of the Service members military duties.

(2) Affect adversely the readiness of the unit, command, or activity to which the member is assigned.

(b) If such jury service would interfere with the Service member's military duties or adversely affect readiness, the Service member shall be exempted from jury duty. The decision of the Secretary concerned, or the official to whom such authority has been delegated, shall be conclusive.

(c) All general and flag officers, commanding officers, and all personnel assigned to the operating forces, in a training status, or stationed outside the United States are exempt from serving on a State or local jury. Such jury service necessarily would interfere unreasonably with the performance of military duties by these members and adversely affect the readiness of the unit, command, or activity to which they are assigned.

(d) Service members who serve on State or local juries shall not be charged leave or lose any pay or entitlements during the period of service. All fees accrued to members for jury service are payable to the U.S. Treasury. Members are entitled to any reimbursement from the State or local jury authority for expenses incurred in the performance of jury duty, such as for transportation costs or parking fees.

(e) Written notice of each exemption determination shall be provided to the responsible State or local official who

summoned an exempt member for jury duty.

Helene Drago, (215) 814-5796, or by e-mail at *drago.helene@epa.gov*.

**SUPPLEMENTARY INFORMATION:** On May 31, 2006 and July 5, 2006, the Maryland Department of the Environment (MDE) submitted a revision (#06-04) to its State Implementation Plan (SIP) to establish Reasonably Available Control Technology (RACT) requirements for the manufacturing of hypodermic products, syringes, catheters, blood handling and other medical devices. The revision applies to any medical device manufacturing installation that emits, or has the potential to emit, 100

pounds or more per day of volatile organic carbon (VOC). The revisions add Regulation .31 under the Code of Maryland Regulations (COMAR) 26.11.19, Volatile Organic Compounds from Specific Processes.

#### I. Background

Medical device manufacturing includes production of hypodermic products, catheters, syringes, blood collection, processing, storage and transfusion products. Although the products are small in size, the large volume of pieces manufactured generates significant VOC emissions. The majority of VOC emissions from manufacturing of medical devices comes from bonding of components, coating and cleaning operations. First and foremost, medical device manufacturers are required to comply with the requirements of Food, Drug and Cosmetics Act and the regulations promulgated by Food and Drug Administration (FDA). Medical device manufacturing operations are not covered under any specific Federal environmental regulations.

Under Maryland's regulations found at COMAR 26.11.19, Control of Volatile Organic Compounds from Specific Processes, a facility that has the potential to emit more than 25 tons a year of VOC emissions is subject to the RACT requirements under COMAR 26.11.19.02. The purpose of this regulation is to establish a RACT requirement specific to the medical device manufacturers engaged in the production of hypodermic products, syringes, catheters, blood handling and other medical devices.

#### II. Summary of SIP Revision

The regulation applies to a person who owns or operates a medical device manufacturing installation that emits or has the potential to emit, 100 pounds or more per day of VOC emissions. Medical device manufacturing operations are also subject to the compliance, recordkeeping and general requirements under COMAR 26.11.19.02 and equipment leak requirements under COMAR 26.11.19.16. The regulations establish control requirements for three main VOC emitting operations: (1) Solvent bonding, (2) biopassive coating, and (3) steel cannula coating. For solvent bonding operations, appropriately designed VOC impermeable covers on dip pots are required. Due to the evolving nature of the process, the State may, if necessary, require participation in an evaluation of new or innovative designs or VOC material substitutions. Biopassive coating operation is required
