

positions, the resulting total number of title V engineers will be eight, which is consistent with MCAQD's latest workload assessment. MCAQD is actively recruiting to fill the four open title V engineer positions, as well as the three contract engineer positions.

EPA noted in its title V program evaluation report that poor compensation and lack of opportunity for career development contributed to low morale at Maricopa County.⁶ So as part of its strategy to retain existing staff, Maricopa County focused on these two main issues. As noted earlier, Maricopa County addressed the first issue of poor compensation through a market study and resulting salary increases. To address the second issue of career development, MCAQD has begun to develop or has already completed the following actions EPA recommended in the title V program evaluation report: a review of the job classifications that would apply to title V engineers, implementation of a training program for staff, creation of standard operating procedures (SOPs), and providing mentorship to staff.

Regarding job classifications, MCAQD has streamlined the number of "environmental engineering specialist" (EES) job classifications from three to two and changed the definition of each classification in an effort to clarify the criteria for salary increases and promotions. MCAQD has placed more of an emphasis on number of years of experience as well as having a professional engineering (P.E.) license. For example, MCAQD decided to eliminate the former EES Intern classification which required no experience; instead, the current first-level EES classification requires at least two years of experience, and the second-level EES classification requires a P.E. license. In addition, as evidenced by the implementation of salary increases on December 5, 2005, the range of salaries for each of the current EES classifications is higher than that for any of the former EES classifications. In fact, the range of salaries for the current second-level EES classification is even higher than that for the former EES Supervisor classification.⁷

MCAQD has a contingency plan in place until the open title V engineering

positions can be filled. MCAQD's fee rule allows MCAQD to bill a source for the cost of obtaining consultants for expedited permit processing. Because MCAQD has an approved consultant list, the entire process from sending requests for proposals (RFP) to selecting a bidder takes only about 30 to 60 days, which is substantially faster than the standard RFP process. Since 2005, one permitting action has been completed by a consultant through this expedited process. Currently, there are three consulting firms under contract, each one working on a different permitting action. MCAQD estimates that the work performed by the consultants for these four projects (the one completed and the three still in progress) would be equivalent to the work performed by 3 FTEs. MCAQD plans to continue to use consultants as necessary.

MCAQD submitted to EPA a strategy to hire and retain adequate staff to successfully implement its title V program. Included in the submittal was an updated workload assessment specific to title V tasks. MCAQD also described a contingency plan if it was unable to fill open title V engineering positions. MCAQD has followed through on implementation of its strategy and, though it has not completed all steps, we are confident that MCAQD will continue its efforts until it is able to fill all open title V positions.

III. EPA's Action

EPA is notifying the public that, based on the information provided by MCAQD, internal operational changes within MCAQD, and a Maricopa County rule change, EPA has determined that Maricopa County has resolved each of the deficiencies identified by EPA in the NOD for Maricopa County's title V operating permits program, 70 FR 32243 (June 2, 2005). Therefore, based on the rationale set forth above, EPA is not invoking sanctions pursuant to section 179(b) of the Act, nor administering any portion of the County's operating permits program, pursuant to 40 CFR 70.10(b)(4).

IV. Administrative Requirements

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of today's action must be filed in the United States Court of Appeals for the appropriate circuit by January 19, 2007.

List of Subjects in 40 CFR Part 70

Environmental protection,
Administrative practice and procedure,

Air pollution control, Incorporation by reference, Intergovernmental relations, Operating permits, Reporting and recordkeeping requirements.

Dated: November 9, 2006.

Wayne Nastri,

Regional Administrator, Region 9.

40 CFR Part 80

Regulation of Fuels and Fuel Additives

CFR Correction

In Title 40 of the Code of Federal Regulations, parts 72 to 80, revised as of July 1, 2006, on page 695, § 80.75 is corrected by reinstating paragraph (a)(2) to read as follows:

§ 80.75 Reporting requirements.

* * * * *

(a) * * *

(2) The following information shall be included in each quarterly report for each batch of reformulated gasoline or RBOB which is included under paragraph (a)(1) of this section:

- (i) The batch number;
- (ii) The date of production;
- (iii) The volume of the batch;
- (iv) The grade of gasoline produced (i.e., premium, mid-grade, or regular);
- (v) For any refiner or importer:
 - (A) Each designation of the gasoline, pursuant to § 80.65; and
 - (B) The properties, pursuant to §§ 80.65 and 80.66;
- (vi) For any importer, the PADD in which the import facility is located;
- (vii) [Reserved]
- (viii) In the case of any previously certified gasoline used in a refinery operation under the terms of § 80.65(i), the following information relative to the previously certified gasoline when received at the refinery:
 - (A) Identification of the previously certified gasoline as such;
 - (B) The batch number assigned by the receiving refinery;
 - (C) The date of receipt; and
 - (D) The volume, properties and designation of the batch.
