Expiration Date of Approval: 8/31/07.

Type of Request: Revision.

Abstract: Federal land-managing agencies are responsible for the management of more than 650 million acres of public lands; this includes management for recreation opportunities. To manage well and wisely, knowledge of recreation demands, opinions, preferences, and attitudes regarding the management of these lands is imperative and necessary to the development of effective policy, planning, and on-the-ground management. For all federal agencies, input from and knowledge about the public is mandatory.

For both land and non-land management agencies, the collection and analysis of public demand data is vital to designing effective policies and programs for the management and use of water, forest, and wildlife resources. Authorizing legislation for this collection is the Forest and Rangeland Renewable Resources Planning Act (RPA) (PL 93-378-88 Stat. 475), which directs the Secretary of Agriculture to

assess the status of the Nation's forest and range lands periodically and to recommend a Forest Service program for their sustained management and use. Among the program areas included in the Forest Service assessment are outdoor recreation and wilderness.

This collection is a multi-agency partnership. The Forest Service (U.S. Department of Agriculture) and the National Oceanic and Atmospheric Administration (U. S. Department of Commerce) are the lead agencies. This is the ninth in a series of surveys conducted since 1960. The survey:

- (1) Measures the public demand on the Nation's land, water, and other natural resources for outdoor recreation;
- (2) Identifies public perceptions of accessibility to recreational sites;
- (3) Seeks public feedback regarding the management of public recreation sites and natural resources;
- (4) Asks for suggestions on how public agencies can improve management of public recreation areas and natural resources;
- (5) Seeks information on public attitudes about the environment and preferences for public and private recreational sites; and
- (6) Identifies shifts in recreational demands that might influence the delivery of recreational services.

The survey consists of a telephone survey of 75,000 individuals, age 16 or older, residing in the United States and will be conducted using computer-assisted telephone interviewing (CATI) technology. The Human Dimensions Research Laboratory at the University of Tennessee in Knoxville, TN will conduct the telephone interviews and data collection. A team of research scientists representing the main federal agencies involved in the survey will analyze the data. Both English and Spanish versions of the questionnaires will be used.

Estimate of Annual Burden: 15 minutes per respondent.

Type of Respondents: Individuals.
Estimated Annual Number of Respondents: 25,000.

Estimated Annual Number of Responses per Respondent: 65.
