

customer's total load on the hour of the Monthly Transmission Peak Load and a Base Charge applied to the customer's total load less Customer-Served Load (CSL), if any. CSL is the amount of load that the customer agrees to serve without using its NT service. CSL is limited to the annual megawatt amount and resources specified in NT service agreements as of October 2005. Transmission Services intends to eliminate CSL as of October 1, 2011.

- *Point-to-Point (PTP-08) rate*—The PTP rate is a contract-demand rate that applies to customers taking PTP Transmission Service on BPA's Integrated Network under the OATT. There are separate PTP rates for long-term firm service; short-term firm and non-firm service; and hourly firm and non-firm service. The rate for long-term firm service includes a Short Distance Discount. All short-term and hourly PTP rates are downwardly flexible. In cases in which transmission service is curtailed or interrupted because of conditions on the FCRTS, the billing factor for Hourly Nonfirm Service, which otherwise is Reserved Capacity, will be (i) Reserved Capacity minus the curtailed capacity, when the interruption occurs before the close of the scheduling hour; and (ii) scheduled energy, when the interruption occurs after the close of the scheduling hour. In addition, the availability section of the PTP-08 rate schedule has been revised to add Conditional Firm Transmission Service, as applicable when such service is offered.

In addition to the five rates for network use, other proposed transmission rates include:

- *The Southern Intertie (IS-08) and Montana Intertie (IM-08) rates* are contract-demand rates that apply to customers taking PTP Transmission Service under the OATT on the Southern Intertie and Montana Intertie, respectively. These rates are structured in the same way as the PTP rate, except that no Short Distance Discount is available. Transmission Services is proposing similar revisions for these rates.

- *The Townsend-Garrison Transmission (TGT-08) rate and the Eastern Intertie rate (IE-08)* are developed pursuant to the Montana Intertie agreement.

- *The Use-of-Facilities (UFT-08) rate* establishes a formula for charging for the use of a specific facility based on the annual cost of that facility.

- *The Advance Funding (AF-08) rate* allows Transmission Services to collect the capital and related costs of specific facilities through an advance-funding mechanism.

## 2. Ancillary Services Rates

In addition to the rate level changes specified in the Settlement Agreement, other aspects of the Ancillary Services and Control Area Services rates are being revised in accordance with the Settlement Agreement as follows:

- The billing factors for *Scheduling, System Control, and Dispatch Service and Reactive Supply and Voltage Control from Generation Sources Service* rates are being revised to clarify that, when there is an unauthorized increase, they are increased by the amount of the Unauthorized Increase Charge. The rate that is applied to the billing factors, however, remains the same.

- *The Reactive Supply and Voltage Control from Generation Sources Service* rate is a formula rate that is determined quarterly beginning October 1, 2007, and is being revised to recover only the cost, if any, of paying reactive rates to non-federal generators and of adjustments for self-supply of reactive power.

- The rate for *Regulation and Frequency Response Service* is fixed for the Rate Period.

- The rates for *Operating Reserves—Spinning and Supplemental* are fixed for the Rate Period. In addition to the rate for customers who elect to purchase Operating Reserves from BPA Transmission Services for the rate period, the rate schedule is being revised to include a charge applicable to customers who elect to self-supply or acquire Operating Reserves from third-party suppliers for the Rate Period but then default on their self-supply or third-party supply obligations.

## 3. Other Rates and Charges

Other charges that may apply to a customer's transmission service include a Delivery Charge for the use of low-voltage delivery substations, a Power Factor Penalty Charge, Incremental Cost Rates for transmission requests that require the construction of new facilities, a Failure to Comply Charge for failure to comply with a curtailment, redispatch, or load shedding order, and an Unauthorized Increase Charge for customers who exceed their contracted capacity amounts. The Reservation Fee is being revised to eliminate the application of the rate to deferred service. The Reservation Fee will apply only for extensions of the service commencement date of a long-term firm PTP transmission service reservation.
