

D. Labeling Issues

1. There are many differences between the labeling requirements required by FDA's OTC drug labeling requirements and EPA's pesticide labeling requirements. For example, the formats and the order in which information is presented are quite different. FDA allows the use of the word "warning" on labels; however it is only allowed as an indicator of toxicity level on pesticide labels. Various required section headings are different. Please comment on how such labeling differences can be reconciled.

2. FDA ingredient statements list the "inactive or inert" ingredients more often and in greater detail than do EPA approved labels. The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) does not require the listing of the identities of inert ingredients on the label. Are there ways to provide the insect repellent inert ingredients information in the product's labeling to satisfy the drug requirements of the FFDCA?

3. Is it desirable for users of these products to have a single integrated label, or would an insect repellent (EPA) and a sunscreen (FDA) section in the product's labeling be preferable?

4. Should the insect repellent/sunscreen combination products be required to have a statement on the front panel of the label specifically identifying the product as containing an insect repellent (such as, This Product Contains An Insect Repellent)? Would this be useful to help consumers distinguish between sunscreen products that contain pesticides from the typical sunscreen drug products that contain no pesticides?
