## SUPPLEMENTARY INFORMATION:

### I. Introduction

The U.S. Nuclear Regulatory Commission (NRC) has received, by letter dated October 24, 2006, a license renewal application from AREVA NP, Inc. (AREVA), requesting renewal of License No. SNM-1227 at its Richland fuel fabrication facility located in Richland, Washington. License No. SNM-1227 authorizes the licensee to possess and use special nuclear material for the manufacture of fuel for nuclear power plants.

The Richland facility has been licensed by the Atomic Energy Commission and its successor, the NRC, to manufacture low-enriched uranium fuel for nuclear power plants. The license was renewed in 1996 for a period of 10 years, expiring on November 30, 2006. By applications dated October 24 and December 13, 2006, AREVA requested renewal of their license for a period of 40 years. The NRC will review the license renewal application for compliance with applicable sections of regulations in Title 10 of the Code of Federal Regulations (10 CFR)—Energy, Chapter I—Nuclear Regulatory Commission. The license renewal application included an Environmental Report, which the NRC will review and use to prepare an environmental assessment to assist in the NRC's determination on the license renewal application, as required by 10 CFR Part 51, Environmental Protection Regulations for Domestic Licensing and Related Regulatory Functions, and the National Environmental Policy Act.

An NRC administrative review, documented in a letter to AREVA dated February 7, 2007, (ML070320061) found the application acceptable to begin a technical review. Because AREVA filed the application for renewal not less than 30 days before the expiration of the date stated in the existing license, the existing license will not expire until the Commission makes a final determination on the renewal application, in accordance with the timely renewal provision of 10 CFR 70.38(a)(1). If the NRC approves the renewal application, the approval will be documented in NRC License No. SNM-1227. However, before approving the proposed renewal, the NRC will need to make the findings required by the Atomic Energy Act of 1954, as amended, and NRC's regulations. These findings will be documented in a Safety Evaluation Report and an Environmental Assessment and/or an Environmental Impact Statement.
