Nuevo Energy Company	On February 16, 2004, a transformer on a variable speed drive (VSD) unit over-heated and caught fire. A Minerals Management Service (MMS) investigation of the incident determined the fire, which was confined to the motor control center room, was due to the following causes: The electrical overload protection on the VSD had been placed in a non-functional mode. High amperage from a downhole electric submersible pump caused transformer to overload on the VSD, which subsequently overheated. Melting metal from the transformer dripped into a pan of threading oil below the transformer. A cotton glove that was laying in the pan of threading oil ignited. The resultant fire was extinguished by platform personnel investigating the source of smoke from the motor control center.	\$8,000 2/8/06	§ 250.107, § 250.803(c)(1).
