II. Background

Monsanto Company has developed an insect-protected soybean, MON 87701, that produces the Cry1Ac protein to provide protection from feeding damage from certain lepidopteran pests. The 524-EUP-R application is for 56.0 acres of MON 87701 for the 2007 growing season. This insect-protected soybean product has a limited fit in the United States since only a small portion of the United States soybean production acres are significantly and consistently affected by the target lepidopteran pests. The purpose of growing MON 87701 in the United States is to evaluate and further develop the product in support of a planned commercialization in South America. A total of five trial protocols will be conducted, including: Agronomic yield trials, breeding and observation nursery trials, regulatory trials, efficacy trials, and product development trials. States involved include: Alabama, Arkansas, Georgia, Illinois, Indiana, Kansas, Louisiana, Maryland, Mississippi, Missouri, North Carolina, Oklahoma, Puerto Rico, South Carolina, Tennessee, Texas, and Virginia.

III. What Action is the Agency Taking?

Following the review of the Monsanto Company application and any comments and data received in response to this notice, EPA will decide whether to issue or deny the EUP request for this EUP program, and if issued, the conditions under which it is to be conducted. Any issuance of an EUP will be announced in the **Federal Register**.

IV. What is the Agency's Authority for Taking this Action?

The Agency's authority for taking this action is under FIFRA section 5.
