Our written description of the scope of this order is dispositive.

Analysis of Comments Received

All issues raised in this sunset review are addressed in the "Issues and Decision Memorandum for the Full Sunset Review of the Antidumping Duty Order on Oil Country Tubular Goods ("OCTG") from Mexico; Final Results," from Stephen J. Claeys, Deputy Assistant Secretary for Import Administration, to David M. Spooner, Assistant Secretary for Import Administration, dated April 27, 2007

("Decision Memo"), which is hereby adopted by this notice. The issues discussed in the Decision Memo include the likelihood of continuation or recurrence of dumping and the magnitude of the margin likely to prevail if the antidumping duty order were revoked. Parties can find a complete discussion of all issues raised in this sunset review and the corresponding recommendations in this public memorandum, which is on file in room B-099 of the main Department building. In addition, a complete version of the Decision Memo can be accessed directly on the Web at <http://ia.ita.doc.gov/frn>. The paper copy and electronic version of the Decision Memo are identical in content.

Final Results of Review

The Department determines that revocation of the antidumping duty order on OCTG from Mexico is likely to lead to continuation or recurrence of dumping at the following weighted-average margins:

Manufacturers/Producers/Exporters	Weighted-Average Margin (Percent)
TAMSA	21.70
Hylsa	0.62
All Others	21.70

This notice also serves as the only reminder to parties subject to administrative protective orders ("APO") of their responsibility concerning the return or destruction of proprietary information disclosed under APO in accordance with section 351.305 of the Department's regulations. FOR FURTHER INFORMATION CONTACT: Patrick Opay or Kate Swails, (301)713–2289.

SUPPLEMENTARY INFORMATION: The subject modification to Permit No. 1557, issued on June 21, 2006 (71 FR 36520) is requested under the authority of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*) and the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR 222–226).

Permit No. 1557 authorizes the permit holder to investigate leatherback sea turtle regional behavior and movements in near-shore waters off the eastern United States and to identify their dispersal in relation to oceanographic conditions and fishing activities. The research will also help establish baseline health assessments, genetic identities, sex ratios, and stable isotope composition of leatherback sea turtle tissues and prey. Researchers are authorized to conduct research on up to 12 leatherback sea turtles annually that have been disentangled from fishing

gear by the stranding network or that researchers have captured using a breakaway hoop net. Turtles are measured, weighed, photographed and video taped, flipper and passive integrated transponder (PIT) tagged, blood sampled, cloacal swabbed, nasal swabbed, skin sampled, tagged with electronic instruments, and released. The research permit was issued for 5 years. The permit holder currently requests authorization to take an additional eight leatherbacks per year. Turtles would be measured, weighed, photographed and video taped, flipper and PIT tagged, blood sampled, cloacal swabbed, nasal swabbed, skin sampled. The researchers propose to attach satellite-linked data recorders to the turtle's carapace and to feed stomach temperature pills to the animals. These pills would record stomach temperatures and transmit them to the satellite-linked data recorder for transmission to the researchers. This research would help researchers better understand where, when, and under what environmental conditions leatherback sea turtles forage so as to better predict their movements. This information would be used to help predict leatherback movements and potential interactions with fisheries and other human activities to allow resource managers to design management strategies to protect this species.
