

The major components of the proposed deepwater port would be the Support Platform, two HiLoad floating LNG transfer and re-gasification units, two PLEMs with ancillary risers and terminal pipelines, HiLoad parking line pilings, and approximately 25 miles of new subsea pipeline.

BOET will have an average throughput capacity of 1.2 billion standard cubic feet per day (Bscfd) of natural gas. No new onshore pipelines or LNG storage facilities are proposed with this action. A shore based facility will be used to facilitate movement of personnel, equipment, supplies, and disposable materials between the Terminal and shore.

Construction of the deepwater port would be expected to take 30 months; with startup of commercial operations in 2010, should a license be issued. The deepwater port, if licensed, would be designed, constructed and operated in accordance with applicable codes and standards and would have an expected operating life of approximately 25 years.
