

The demarcation point burden consists of two components. (1) The LEC shall make available information on the location of demarcation point within ten business days of a request from the premises owner (location information); and (2) At the time of installation, the LEC shall fully inform the premises owner of its options and rights regarding the placement of the demarcation point or points (options information).

The OTARD portion of this information collection relates to the revisions of the Commission's rules regarding Over-the-Air Reception Devices ("OTARDs"), 47 CFR 1.4000. Under those revisions, as a condition of invoking protection under 47 CFR 1.4000 from government, landlord, and association restrictions, a licensee must ensure that subscriber antennas are labeled to give notice of potential radio frequency safety hazards of these antennas. Labeling information should include minimum separation distances required between users and radiating antennas to meet the Commission's radio frequency exposure guidelines. Labels should also reference to the Commission's applicable radio frequency exposure guidelines and should use the ANSI-specified warning symbol for frequency exposure. In addition, the instruction manuals and other information accompanying subscriber transceivers should include a full explanation of the labels, as well as a reference to the applicable Commission radiofrequency exposure guidelines.

The availability of this information will give notice to the public—particularly to purchasers of OTARD dishes—of potential radiofrequency safety hazards of OTARD antennas used for telecommunications service. Thus, this information will help ensure that these antennas comply with the Commission's limits on radio frequency exposure.

This information will facilitate efficient interaction between premises owners and LECs regarding the placement of the demarcation point, which marks the end of wiring under control of the LEC and the beginning of wiring under the control of the premises owner or subscriber. The demarcation point is a critical point of interconnection where competitive LECs can gain access to the inside wiring of the building to provide service to customers in the building. This collection will also help ensure that customer-end antennas used for telecommunications service comply with the Commission's limits on radio frequency exposure, and it will provide the Commission with information on

the state of the market. In short, this information will be used to foster competition in local telecommunications markets by ensuring that competing telecommunications providers are able to provide services to customers in multiple tenant environments (MTEs).
