TABLE 6H.--DELETIONS TO THE CC EXCLUSIONS LIST

CCs that are deleted from the list are in Table 6H-Deletions to the CC Exclusions List. Each of the principal diagnoses is shown with an asterisk, and the revisions to the CC Exclusions List are provided in an indented column immediately following the affected principal diagnosis.

[1] Transition blended relative weights for FY 2008 determined as described in Step 7 in section II.I.4. of the preamble of this final rule.

[2] The ''short-stay outlier threshold'' is calculated as 5/6ths of the geometric average length of stay of the LTC–DRG (as specified at § 412.529(a), in conjunction with new § 412.503).

[3] The ''IPPS-comparable threshold'' is calculated as one standard deviation from the geometric average length of stay of the same DRG under the IPPS as specified at § 412.529(c)(3)(i). Note, as discussed in the RY 2008 LTCH PPS final rule (72 FR 26907), for some MS–LTC–DRGs, it was sometimes necessary to supplement IPPS hospital statistical data due to a low volume of IPPS cases, and for some MS–LTC–DRGs although IPPS hospital data may be available, a value of zero was assigned. In addition, we note that the ''IPPS comparable threshold'' is only applicable in the context of the payment adjustment for short-stay outliers (SSOs) at § 412.529. A LTCH case that has a covered length of stay that exceeds the ''SSO threshold'' (and therefore is not an SSO case) but is within the value of the ''IPPS comparable threshold'' computed from IPPS statistical data would not be subject to the SSO adjustments at § 412.529. So that it is clear that the ''IPPS comparable threshold'' only applies to LTCH cases that are SSOs, in instances where the value of the ''IPPS comparable threshold'' computed from IPPS statistical data for an MS–LTC–DRG is greater than the ''SSO threshold'' for the same MS–LTC–DRG, in this table we have substituted the computed value of the ''IPPS comparable threshold'' for the MS–LTC–DRG with the value of the ''SSO threshold'' (in column 6) for the same MS–LTC–DRG.

Appendix A—Regulatory Impact Analysis

I. Overall Impact

We have examined the impacts of this final rule with comment period as required by Executive Order 12866 (September 1993, Regulatory Planning and Review) and the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4), and Executive Order 13132.

Executive Order 12866 (as amended by Executive Order 13258, which merely reassigns responsibility of duties, and Executive Order 13422) directs agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). A regulatory impact analysis (RIA) must be prepared for major rules with economically significant effects ($100 million or more in any 1 year).

We have determined that this rule is a major rule as defined in 5 U.S.C. 804(2). We estimate that the changes for FY 2008 operating and capital payments will redistribute in excess of $100 million among different types of inpatient cases. The market basket update to the IPPS rates required by the statute, in conjunction with other payment changes in this final rule with comment period, will result in an approximate $3.8 billion increase in FY 2008 operating and capital payments. This amount does not reflect changes in hospital admissions or case-mix intensity in operating PPS payments, which will also affect overall payment changes. It does assume that the −1.2 percent adjustment to the IPPS standardized amounts for adoption of the MS–DRGs will be completely offset by increases in case-mix that are the result of documentation and coding changes and not real increases in patient severity of illness.

The RFA requires agencies to analyze options for regulatory relief of small businesses. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and government agencies. Most hospitals and most other providers and suppliers are considered to be small entities, either by nonprofit status or by having revenues of $31.5 million or less in any 1 year. (For details on the latest standards for heath care providers, we refer readers to page 33 of the Table of Small Business Size Standards at the Small Business Administration Web site at: *http://www.sba.gov/services/contractingopportunities/sizestandardstopics/tableofsize/index.html.*) For purposes of the RFA, all hospitals and other providers and suppliers are considered to be small entities. Individuals and States are not included in the definition of a small entity. We believe that this final rule with comment period will have a significant impact on small entities as explained in this Appendix. Because we acknowledge that many of the affected entities are small entities, the analysis discussed throughout the preamble of this final rule with comment period constitutes our final regulatory flexibility analysis. In the proposed rule, we solicited comments on our estimates and analysis of the impact of the proposed rule on those small entities. We address any public comments that we received on the impact of the changes we are finalizing in the applicable sections of this appendix.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis for any proposed or final rule that may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. With the exception of hospitals located in certain New England counties, for purposes of section 1102(b) of the Act, we now define a small rural hospital as a hospital that is located outside of an urban area and has fewer than 100 beds. Section 601(g) of the

Social Security Amendments of 1983 (Pub. L. 98–21) designated hospitals in certain New England counties as belonging to the adjacent urban area. Thus, for purposes of the IPPS, we continue to classify these hospitals as urban hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. That threshold level is currently approximately $120 million. This final rule with comment period will not mandate any requirements for State, local, or tribal governments, nor will it affect private sector costs.

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. As stated above, this final rule with comment period would not have a substantial effect on State and local governments.

The following analysis, in conjunction with the remainder of this document, demonstrates that this rule is consistent with the regulatory philosophy and principles identified in Executive Order 12866, the RFA, and section 1102(b) of the Act. The rule will affect payments to a substantial number of small rural hospitals, as well as other classes of hospitals, and the effects on some hospitals may be significant.

II. Objectives

The primary objective of the IPPS is to create incentives for hospitals to operate efficiently and minimize unnecessary costs while at the same time ensuring that payments are sufficient to adequately compensate hospitals for their legitimate costs. In addition, we share national goals of preserving the Medicare Hospital Insurance Trust Fund.

We believe the changes in this final rule with comment period will further each of these goals while maintaining the financial viability of the hospital industry and ensuring access to high quality health care for Medicare beneficiaries. We expect that these changes will ensure that the outcomes of this payment system are reasonable and equitable while avoiding or minimizing unintended adverse consequences.

III. Limitations of Our Analysis

The following quantitative analysis presents the projected effects of our policy changes, as well as statutory changes effective for FY 2008, on various hospital groups. We estimate the effects of individual policy changes by estimating payments per case while holding all other payment policies constant. We use the best data available, but, generally, we do not attempt to make adjustments for future changes in such variables as admissions, lengths of stay, or case-mix. However, we believe that adoption of the MS–DRGs in this final rule with comment period will create a risk of increased aggregate levels of payment as a result of more comprehensive documentation and coding. As explained earlier in this final rule with comment period, the Secretary has broad discretion under section 1886(d)(3)(A)(vi) of the Act to adjust the standardized amount so as to eliminate the effect of changes in coding or classification of discharges that do not reflect real changes in case-mix. Using this authority, the Medicare Actuary estimates that a negative adjustment of 4.8 percent will be necessary to maintain budget neutrality for the transition to the MS–DRGs. However, with the 2-year implementation of the MS–DRG system, the 4.8 percent adjustment will be made over 3 years. Therefore, we are reducing the IPPS standardized amount by 1.2 percent for FY 2008. We will revisit the adjustment in 2 years if projected and actual data are different. The payment impacts shown below illustrate the impact of changes in hospital payment, including the −1.2 percent adjustment to the IPPS standardized amounts both prior to and following the estimated growth in case-mix. As we had done in the previous rules, we solicited comments and information about the anticipated effects of the proposed changes on hospitals and our methodology for estimating them.

IV. Hospitals Included In and Excluded From the IPPS

The prospective payment systems for hospital inpatient operating and capital related costs encompass most general short-term, acute care hospitals that participate in the Medicare program. There were 35 Indian Health Service hospitals in our database, which we excluded from the analysis due to the special characteristics of the prospective payment methodology for these hospitals. Among other short term, acute care hospitals, only the 46 such hospitals in Maryland remain excluded from the IPPS under the waiver at section 1814(b)(3) of the Act.

As of July 2007, there are 3,534 IPPS hospitals to be included in our analysis. This represents about 59 percent of all Medicare-participating hospitals. The majority of this impact analysis focuses on this set of hospitals. There are also approximately 1,286 CAHs. These small, limited service hospitals are paid on the basis of reasonable costs rather than under the IPPS. There are also 1,198 specialty hospitals and 2,262 specialty units that are excluded from the IPPS. These specialty hospitals include IPFs, IRFs, LTCHs, RNHCIs, children's hospitals, and cancer hospitals. Changes in payments for IPFs and IRFs are made through other separate rulemaking. Payment impacts for these specialty hospitals and units, other than the reasonable cost-based updates for IPFs paid under a blend, are not included in this final rule with comment period. There is also a separate rule to update and make changes to the LTCH PPS for its July 1 to June 30 rate year. However, we have traditionally used the IPPS rule to update the LTCH relative weights because the LTCH PPS uses the same DRGs as the IPPS, resulting in the LTCH relative weights being recalibrated according to the same schedule as the IPPS (that is, for each Federal fiscal year). The impacts of our policy changes on LTCHs, where applicable, are discussed below.

V. Effects on Excluded Hospitals and Hospital Units

As of July 2007, there were 1,198 hospitals excluded from the IPPS. Of these 1,187 hospitals, 485 IPFs, 4 LTCHs, 82 children's hospitals, 11 cancer hospitals, and 15 RNHCIs are either being paid, on a reasonable cost basis or have a portion of the PPS payment based on reasonable cost principles subject to the rate-of-increase ceiling under § 413.40. The remaining providers, 215 IRFs and 386 LTCHs, are paid 100 percent of the Federal prospective rate under the IRF PPS and the LTCH PPS, respectively. As stated above, IRFs and IPFs that are not under a transition period are not affected by this final rule with comment period. (IPFs under a transition period do have a portion of their PPS payment based on reasonable cost principles and thus are affected by this final rule with comment period.) The impacts of the changes to LTCHs are discussed separately below. In addition, there are 1,276 IPFs co-located in hospitals otherwise subject to the IPPS, paid on a blend of the IPF PPS per diem payment and the reasonable cost-based payment and 986 IRFs (paid under the IRF PPS) co-located in hospitals otherwise subject to the IPPS. Under § 413.40(a)(2)(i)(A), the rate-of-increase ceiling is not applicable to the 93 IPPS excluded hospitals and units in Maryland that are paid in accordance with the waiver at section 1814(b)(3) of the Act.

In the past, hospitals and units excluded from the IPPS have been paid based on their reasonable costs subject to limits as established by the Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA). Hospitals that continue to be paid fully on a reasonable cost basis are subject to TEFRA limits for FY 2008. For these hospitals (cancer and children's hospitals), consistent with section 1886(b)(3)(B)(ii) of the Act, the update is the percentage increase in the FY 2008 IPPS operating market basket, which is 3.3 percent, based on Global Insights, Inc.'s 2007 second quarter forecast of the IPPS operating market basket increase. In addition, in accordance with § 403.752(a) of the regulations, RNHCIs are paid under § 413.40, which also uses section 1886(b)(3)(B)(ii) of the Act to update target amounts by the rate-of-increase percentage. For RNHCIs, the update is the percentage increase in the FY 2008 IPPS operating market basket increase, which is 3.3 percent, based on Global Insight, Inc.'s 2007 second quarter forecast of the IPPS operating market basket increase.

Effective for cost reporting periods beginning on or after October 1, 2002, LTCHs that elected to be paid based on 100 percent of the LTCH PPS are paid, based on a Federal prospective payment amount that is updated annually. Existing LTCHs received a PPS blended payment that consisted of the Federal prospective payment rate and a reasonable cost-based payment rate over a 5-year transition period, unless the LTCH elected to be paid at 100 percent of the Federal prospective rate at the beginning of any of its cost reporting periods during the 5-year transition period. In accordance with § 412.533, for cost reporting periods beginning on or after October 1, 2006, the LTCH PPS transition blend percentages are

100 percent of the Federal prospective payment amount and zero percent of the PPS amount calculated under reasonable cost principles. FY 2007 was the fifth year of the 5-year transition period established under § 412.533. Because the reasonable cost-based amount is zero percent for cost reporting periods beginning during FY 2008, no LTCH will have a portion of its PPS payment that is based in part on reasonable cost subject to the rate-of-increase ceiling during FY 2008 or thereafter. Thus, there is no longer a need for an update factor for LTCHs' TEFRA target amount for FY 2008.

The final rule implementing the IPF PPS (69 FR 66922) established a 3-year transition to the IPF PPS during which some providers will received a blend of the IPF PPS per diem payment and the TEFRA reasonable cost-based payment. Under this final rule with comment period, the FY 2008 rate-of-increase percentage that is applied to FY 2007 target amounts in order to calculate FY 2008 target amounts is 3.3 percent, based on Global Insight, Inc.'s 2007 second quarter forecast of the excluded hospital market basket increase.

The impact on excluded hospitals and hospital units of the update in the rate-of-increase limit depends on the cumulative cost increases experienced by each excluded hospital or unit since its applicable base period. For excluded hospitals and units that have maintained their cost increases at a level below the rate-of-increase limits since their base period, the major effect is on the level of incentive payments these hospitals and hospital units receive. Conversely, for excluded hospitals and hospital units with per case cost increases above the cumulative update in their rate-of-increase limits, the major effect is the amount of excess costs that will not be reimbursed.

We note that, under § 413.40(d)(3), an excluded hospital or unit whose costs exceed 110 percent of its rate-of-increase limit receives its rate-of-increase limit plus 50 percent of the difference between its reasonable costs and 110 percent of the limit, not to exceed 110 percent of its limit. In addition, under the various provisions set forth in § 413.40, certain excluded hospitals and hospital units can obtain payment adjustments for justifiable increases in operating costs that exceed the limit.

VI. Quantitative Effects of the Policy Changes Under the IPPS for Operating Costs

A. Basis and Methodology of Estimates

In this final rule with comment period, we are announcing policy changes and payment rate updates for the IPPS for operating costs. Changes to the capital payments are discussed in section VIII. of this Appendix.

Based on the overall percentage change in payments per case estimated using our payment simulation model, we estimate that total FY 2008 operating payments will increase 3.5 percent compared to FY 2007, largely due to the statutorily mandated update to the IPPS rates. This amount reflects an adjustment of −1.2 percent to the IPPS standardized amounts to offset an anticipated increase in payments resulting from improved documentation and coding that does not represent real increases in underlying resource demands and patient acuity due to the adoption of MS–DRGs. The impacts do not illustrate changes in hospital admissions or real case-mix intensity, which will also affect overall payment changes.

We have prepared separate impact analyses of the changes to each system. This section deals with changes to the operating prospective payment system. Our payment simulation model relies on the most recent available data to enable us to estimate the impacts on payments per case of certain changes in this final rule with comment period. However, there are other changes for which we do not have data available that would allow us to estimate the payment impacts using this model. For those changes, we have attempted to predict the payment impacts based upon our experience and other more limited data.

The data used in developing the quantitative analyses of changes in payments per case presented below are taken from the FY 2006 MedPAR file and the most current Provider-Specific File that is used for payment purposes. Although the analyses of the changes to the operating PPS do not incorporate cost data, data from the most recently available hospital cost report were used to categorize hospitals. Our analysis has several qualifications. First, in this analysis, we do not make adjustments for future changes in such variables as admissions, lengths of stay, or underlying growth in real case-mix. Second, due to the interdependent nature of the IPPS payment components, it is very difficult to precisely quantify the impact associated with each change. Third, we use various sources for the data used to categorize hospitals in the tables. In some cases, particularly the number of beds, there is a fair degree of variation in the data from different sources. We have attempted to construct these variables with the best available source overall. However, for individual hospitals, some miscategorizations are possible.

Using cases from the FY 2006 MedPAR file, we simulated payments under the operating IPPS given various combinations of payment parameters. Any short-term, acute care hospitals not paid under the IPPS (Indian Health Service hospitals and hospitals in Maryland) were excluded from the simulations. The impact of payments under the capital IPPS, or the impact of payments for costs other than inpatient operating costs, are not analyzed in this section. Estimated payment impacts of FY 2008 changes to the capital IPPS are discussed in section VIII. of this Appendix.

The changes discussed separately below are the following:

- The effects of the annual reclassification of diagnoses and procedures, transition to the MS–DRG system, the recalibration of the DRG relative weights (including the expansion to 15 charge to cost ratios) as required by section 1886(d)(4)(C) of the Act.
- The effects of the changes in hospitals' wage index values reflecting wage data from hospitals' cost reporting periods beginning during FY 2004, compared to the FY 2003 wage data.
- The effects of the wage and recalibration budget neutrality factors.
- The effects of the expiration of the labor market area transition for those hospitals that were urban under the old labor market area designations and are now considered rural hospitals.
- The effects of geographic reclassifications by the MGCRB that will be effective in FY 2008.
- The effects of the adjustment to the application of the rural floor budget neutrality provision on the wage index instead of on the standardized amount.
- The effects of application of an imputed rural floor to States that have no rural areas and to States that have rural areas but no IPPS hospitals are located in those areas (69 FR 49109).
- The effects of the September 30, 2007 expiration of section 508 of Pub. L. 108–173, which allowed qualifying hospitals to appeal the wage index classification otherwise applicable to the hospital and apply for reclassification to another area of the State in which the hospital is located (or, at the discretion of the Secretary, to an area within a contiguous State).
- The effects of section 505 of Pub. L. 108–173, which provides for an increase in a hospital's wage index if the hospital qualifies by meeting a threshold percentage of residents of the county where the hospital is located who commute to work at hospitals in counties with higher wage indexes.
- The effect of the budget neutrality adjustment being made for the adoption of the MS–DRGs under section 1886(d)(3)(A)(iv) of the Act for the change in aggregate payments that is a result of changes in the coding or classification of discharges that do not reflect real changes in case-mix.
- The total estimated change in payments based on FY 2008 policies relative to payments based on FY 2007 policies.

To illustrate the impacts of the FY 2008 changes, our analysis begins with a FY 2007 baseline simulation model using: the FY 2008 update of 3.3 percent; the FY 2007 DRG GROUPER (Version 24.0); the most current CBSA designations for hospitals based on OMB's MSA definitions; the FY 2007 wage index; and no MGCRB reclassifications. Outlier payments are set at 5.1 percent of total operating DRG and outlier payments.

Section 1886(b)(3)(B)(viii) of the Act, as added by section 5001(a) of Pub. L. 109–171, provides that for FY 2007 and subsequent years, the update factor will be reduced by 2.0 percentage points for any hospital that does not submit quality data in a form and manner and at a time specified by the Secretary. At the time this impact was prepared, 146 providers did not receive the full market basket rate-of-increase for FY 2007 because they failed the quality data submission process. For purposes of the simulations shown below, we modeled the payment changes for FY 2008 using a reduced update for these 146 hospitals. However, we do not have enough information to determine which hospitals will not receive the full market basket rate-of-increase for FY 2008 at this time.

Each policy change, statutorily or otherwise, is then added incrementally to this baseline, finally arriving at an FY 2008 model incorporating all of the changes. This simulation allows us to isolate the effects of each change.

Our final comparison illustrates the percent change in payments per case from FY 2007 to FY 2008. Three factors not discussed separately have significant impacts here. The first is the update to the standardized amount. In accordance with section 1886(b)(3)(B)(i) of the Act, we are updating the standardized amounts for FY 2008 using the most recently forecasted hospital market basket increase for FY 2008 of 3.3 percent. (Hospitals that fail to comply with the quality data submission requirements to receive the full update will receive an update reduced by 2.0 percentage points to 1.3 percent.) Under section 1886(b)(3)(B)(iv) of the Act, the updates to the hospital-specific amounts for SCHs and for MDHs are also equal to the market basket increase, or 3.3 percent.

A second significant factor that affects the changes in hospitals' payments per case from FY 2007 to FY 2008 is the change in a hospital's geographic reclassification status from one year to the next. That is, payments may be reduced for hospitals reclassified in FY 2007 that are no longer reclassified in FY 2008. Conversely, payments may increase for hospitals not reclassified in FY 2007 that are reclassified in FY 2008. Particularly with the expiration of section 508 of Pub. L. 108–173, the reclassification provision, these impacts can be quite substantial, so if a relatively small number of hospitals in a particular category lose their reclassification status, the percentage change in payments for the category may be below the national mean.

A third significant factor is that we currently estimate that actual outlier payments during FY 2007 will be 4.6 percent of total DRG payments. When the FY 2007 final rule was published, we projected FY 2007 outlier payments would be 5.1 percent of total DRG plus outlier payments; the average standardized amounts were offset correspondingly. The effects of the lower than expected outlier payments during FY 2008 (as discussed in the Addendum to this final rule with comment period) are reflected in the analyses below comparing our current estimates of FY 2007 payments per case to estimated FY 2008 payments per case (with outlier payments projected to equal 5.1 percent of total DRG payments).

B. Analysis of Table I

Table I displays the results of our analysis of the changes for FY 2008. The table categorizes hospitals by various geographic and special payment consideration groups to illustrate the varying impacts on different types of hospitals. The top row of the table shows the overall impact on the 3,534 hospitals included in the analysis.

The next four rows of Table I contain hospitals categorized according to their geographic location: All urban, which is further divided into large urban and other urban; and rural. There are 2,539 hospitals located in urban areas included in our analysis. Among these, there are 1,406 hospitals located in large urban areas (populations over 1 million), and 1,133 hospitals in other urban areas (populations of 1 million or fewer). In addition, there are 995 hospitals in rural areas. The next two groupings are by bed-size categories, shown separately for urban and rural hospitals. The final groupings by geographic location are by census divisions, also shown separately for urban and rural hospitals.

The second part of Table I shows hospital groups based on hospitals' FY 2008 payment classifications, including any reclassifications under section 1886(d)(10) of the Act. For example, the rows labeled urban, large urban, other urban, and rural show that the number of hospitals paid based on these categorizations after consideration of geographic reclassifications (including reclassifications under section 1886(d)(8)(B) and section 1886(d)(8)(E) of the Act that have implications for capital payments) are 2,578, 1,425, 1,153 and 956, respectively.

The next three groupings examine the impacts of the changes on hospitals grouped by whether or not they have GME residency programs (teaching hospitals that receive an IME adjustment) or receive DSH payments, or some combination of these two adjustments. There are 2,480 nonteaching hospitals in our analysis, 815 teaching hospitals with fewer than 100 residents, and 239 teaching hospitals with 100 or more residents.

In the DSH categories, hospitals are grouped according to their DSH payment status, and whether they are considered urban or rural for DSH purposes. The next category groups together hospitals considered urban after geographic reclassification, in terms of whether they receive the IME adjustment, the DSH adjustment, both, or neither.

The next five rows examine the impacts of the changes on rural hospitals by special payment groups (SCHs, RRCs, and MDHs), as well as rural hospitals not receiving a special payment designation. There were 194 RRCs, 367 SCHs, 150 MDHs, 99 hospitals that are both SCHs and RRCs, and 8 hospitals that are both an MDH and an RRC.

The next series of groupings concern the geographic reclassification status of hospitals. The first grouping displays all urban hospitals that were reclassified by the MGCRB for FY 2008. The second grouping shows the MGCRB rural reclassifications.

The final two groupings are based on the type of ownership and the hospital's Medicare utilization expressed as a percent of total patient days. These data were taken from the FY 2004 Medicare cost reports.

[1] Because data necessary to classify some hospitals by category were missing, the total number of hospitals in each category may not equal the national total. Discharge data are from FY 2006, and hospital cost report data are from reporting periods beginning in FY 2005 and FY 2004.

[2] This column displays the payment impact of the changes to the V25 GROUPER and the recalibration of the DRG weights based on FY 2006 MedPAR data in accordance with section 1886(d)(4)(C)(iii) of the Act.

[3] This column displays the payment impact of updating the wage index data to the FY 2004 cost report data.

[4] This column displays the payment impact of the budget neutrality factor for DRG and wage index changes in accordance with section 1886(d)(4)(C)(iii) of the Act and section 1886(d)(3)(E) of the Act.

[5] Shown here are the effects of the end of the three-year provision where rural hospitals that were formerly located in urban areas will now receive the wage index of the MSA that they are currently located in for FY 2008.

[6] Shown here are the effects of geographic reclassifications by the Medicare Geographic Classification Review Board (MGCRB). The effects demonstrate the FY 2008 payment impact of going from no reclassifications to the reclassifications scheduled to be in effect for FY 2008. Reclassification for prior years has no bearing on the payment impacts shown here. This column reflects the geographic budget neutrality factor of 0.991695.

[7] This column displays the effects of the changes in the rural floor budget neutrality adjustment applied on the wage index instead of on the standardized amount. The column reflects a rural floor budget neutrality factor of 0.996660.

[8] This column displays the payment impact of the application of the imputed rural floor applied to the wage index for providers located in states without rural areas.

[9] This column displays the payment impact of the expiration of section 508 of Pub. L. 108–17, which had allowed qualifying hospitals to reclassify to receive the wage index of another area in their state.

[10] This column displays the impact of section 505 of Pub. L. 108–173, which provides for an increase in a hospitals wage index if the hospital qualifies by meeting a threshold percentage of residents of the county where the hospital is located who commute to work at hospitals in counties with higher wage indexes.

[11] This column shows changes in payments from FY 2007 to FY 2008 including a 0.988 case mix index adjustment for coding and documentation improvements that are anticipated with the adoption of the MS-DRGs prior to the estimated growth occurring. It incorporates all of the changes displayed in Columns 4,5 ,6 ,7 ,8, 9,10 and (the changes displayed in Columns 2 and 3 are included in Column 4).

[12] This column shows changes in payments from FY 2007 to FY 2008 with a case-mix index adjustment and the estimated growth for improvements in documentation and coding. It incorporates all of the changes displayed in Columns 4,5 ,6 ,7 ,8, 9,10 and (the changes displayed in Columns 2 and 3 are included in Column 4). It also reflects the impact of the FY 2008 update, and changes in hospitals' reclassification status in FY 2008 compared to FY 2007. The sum of these impacts may be different from the percentage changes shown here due to rounding and interactive effects.

C. Effects of the Changes to the DRG Reclassifications and Relative Cost-Based Weights (Column 2)

In Column 2 of Table I, we present the combined effects of the DRG reclassifications and recalibration, as discussed in section II. of the preamble to this final rule with comment period. Section 1886(d)(4)(C)(i) of the Act requires us annually to make appropriate classification changes in order to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources.

As discussed in the preamble of this final rule with comment period, we are continuing the 3-year transition from charge-based to cost-based relative weights. In addition, we are implementing the MS–DRGs in a two year transition that will increase the number of DRGs from 538 to 745. For FY 2008, the first year of the transition, 50 percent of the relative weight for a DRG is based on the two-thirds cost weight/one-third charge weight calculated using FY 2006 MedPAR data grouped to the Version 24.0 (FY 2007) DRGs. The remaining 50 percent of the FY 2008 relative weight for a DRG is based on the two-thirds cost weight/one-third charge weight calculated using FY 2006 MedPAR grouped to the Version 25.0 MS–DRGs. Furthermore, the relative weights have been calculated using 15 cost centers as described in Section H of the preamble whereas the relative weights in FY 2007 were calculated using 13 cost centers. In column 2, we compare aggregate payments using the blended FY 2008 relative weights (⅔ cost, ⅓ charge, 50 percent MS–DRGs and 50 percent CMS DRGs) for the MS–DRGs to the FY 2007 blended relative weights (⅓ cost, ⅔ charge) for the CMS DRGs. The methods of calculating the relative weights and the reclassification changes to the GROUPER are described in more detail in section II.H. of the preamble to this final rule with comment period. We note that, consistent with section 1886(d)(4)(C)(iii) of the Act, we are applying a budget neutrality factor to ensure that the overall payment impact of the DRG changes (combined with the wage index changes) is budget neutral. This budget neutrality factor of 0.996563 is applied to payments in Column 4 and not Column 2 because it is a combined DRG reclassification and recalibration and wage index budget neutrality factor.

The changes to the relative weights and DRGs shown in column 2 are prior to any offset for budget neutrality. The ''All Hospitals'' line indicates that changes in this column will increase payments by 0.4 percent. However, as stated earlier, the changes shown in this column are combined with revisions to the wage index and a single budget neutrality adjustment is made for these changes and shown in column 4. Thus, the impact after accounting only for budget neutrality for changes to the DRG relative weights and classification is somewhat lower than the figures shown in this column (approximately 0.4 percent). We estimate that changes to the relative weights and DRGs will increase payments to hospitals located in large urban areas (populations over 1 million) by approximately 0.9 percent before applying an adjustment for budget neutrality. These changes generally increase payments to hospitals in all urban areas (0.5 percent) and large teaching hospitals (0.9 percent) before applying an adjustment for budget neutrality. Rural hospitals will generally experience a decrease in payments from these changes (−0.9 percent) before applying an adjustment for budget neutrality. Cardiac specialty hospitals would experience the greatest decline in payments (−2.5 percent) before applying an adjustment for budget neutrality from the changes to blended MS–DRGs and the blended relative cost weights.

D. Effects of Wage Index Changes (Column 3)

Section 1886(d)(3)(E) of the Act requires that, beginning October 1, 1993, we annually update the wage data used to calculate the wage index. In accordance with this requirement, the wage index for FY 2008 is based on data submitted for hospital cost reporting periods beginning on or after October 1, 2003 and before October 1, 2004.

The estimated impact of the wage data on hospital payments is isolated in Column 3 by holding the other payment parameters constant in this simulation. That is, Column 3 shows the percentage changes in payments when going from a model using the FY 2007 wage index, based on FY 2003 wage data and having a 100-percent occupational mix adjustment applied, to a model using the FY 2008 pre-reclassification wage index, also having a 100-percent occupational mix adjustment applied, based on FY 2004 wage data. The wage data collected on the FY 2004 cost report include overhead costs for contract labor that were not collected on FY 2003 and earlier cost reports. The impacts below incorporate the effects of the FY 2004 wage data collected on hospital cost reports, including additional overhead costs for contract labor compared to the wage data from FY 2003 cost reports that were used to calculate the FY 2007 wage index.

Column 3 shows the impacts of updating the wage data using FY 2004 cost reports. Overall, the new wage data will lead to a −0.1 percent change for all hospitals before application of the wage and DRG recalibration budget neutrality adjustment shown in column 4. Thus, the figures in this column are approximately 0.1 below what they otherwise would be if they also illustrated a budget neutrality adjustment solely for changes to the wage index. Among the regions, the largest increase is in the rural Pacific region, which experiences a 0.8 percent increase before applying an adjustment for budget neutrality. The largest decline from updating the wage data is seen in rural New England region (a 1.2 percent decrease) before applying an adjustment for budget neutrality. The decrease in the pre-reclassified wage index for rural New England is due to a change in our policy regarding how the wage data for New England deemed county hospitals are treated in the wage index calculation, as discussed in section III.I.10. of the preamble of this final rule with comment period. Also discussed in that section, the policy change does not affect the post-reclassified wage data that are used in setting the IPPS rates and reflected in Tables 4A, 4B, and 4C of the Addendum to this final rule with comment period. Thus, even though the pre-reclassified wage index will decline because of the change we made to our policy with respect to New England deemed counties, it will have no effect under the IPPS because we use the post-reclassified wage indices for payment. However, non-PPS payment systems (SNF, IRF, and HHA, among others) that use the pre-reclassified wage index may be affected by this policy change. However, we are limiting this policy change for New England deemed counties only to IPPS hospitals because it was only addressed in the FY 2008 IPPS proposed rule. Any change to non-PPS provider wage indices will be addressed in the respective payment rules for these payment systems.

In looking at the wage data itself, the national average hourly wage increased 4.3 percent compared to FY 2007. Therefore, the only manner in which to maintain or exceed the previous year's wage index was to match or exceed the national 4.3 percent increase in average hourly wage. Of the 3,475 hospitals with wage data for both FYs 2007 and 2008, 1,712, or 49.3 percent, experienced an average hourly wage increase of 4.3 percent or more.

The following chart compares the shifts in wage index values for hospitals for FY 2008 relative to FY 2007. Among urban hospitals, 40 will experience an increase of more than 5 percent and less than 10 percent and 4 will experience an increase of more than 10 percent. Among rural hospitals, 37 will experience an increase of more than 5 percent and less than 10 percent, and 3 will experience an increase of more than 10 percent. However, 940 rural hospitals will experience increases or decreases of less than 5 percent, while 2,384 urban hospitals will experience increases or decreases of less than 5 percent. Fifty urban hospitals will experience decreases in their wage index values of more than 5 percent and less than 10 percent. Fifteen urban hospitals will experience decreases in their wage index values of greater than 10 percent. Two rural hospitals will experience decreases of more than 5 percent, but less than 10 percent. No rural hospitals will experience decreases of more than 10 percent. These figures are changes in the wage index only which adjusts only 69.7 or 62 percent of a hospital's total payment depending upon whether the wage index is greater or less than 1.0. Therefore, these figures are illustrating a somewhat larger change in the wage index than would occur to the hospital's total payment.

The following chart shows the projected impact for urban and rural hospitals.

Percentage change in area wage index values	Number of hospitals	
	Urban	Rural
Increase more than 10 percent	4	3
Increase more than 5 percent and less than 10 percent	40	37
Increase or decrease less than 5 percent	2,384	940
Decrease more than 5 percent and less than 10 percent	50	2
Decrease more than 10 percent	15	0

E. Combined Effects of DRG and Wage Index Changes (Column 4)

Section 1886(d)(4)(C)(iii) of the Act requires that changes to DRG reclassifications and the relative weights cannot increase or decrease aggregate payments. In addition, section 1886(d)(3)(E) of the Act specifies that any updates or adjustments to the wage index are to be budget neutral. As noted in the Addendum to this final rule with comment period, in determining the budget neutrality factor, we equated simulated aggregate payments for FY 2007 and FY 2008 using the FY 2006 Medicare utilization data after applying the changes to the DRG relative weights and the wage index.

We computed a wage and DRG recalibration budget neutrality factor of 0.996563. The 0.0 percent impact for all hospitals demonstrates that these changes, in combination with the budget neutrality factor, are budget neutral. In Table I, the combined overall impacts of the effects of both the DRG reclassifications and the updated wage index are shown in Column 4. The estimated changes shown in this column reflect the combined effects of the changes in Columns 2 and 3 and the budget neutrality factor for the revised FY 2008 wage index. Due to the changes to the application of the rural floor budget neutrality, this column does not include the wage index floor for urban areas as required by section 4410 of Pub. L. 105–33. The effects of that provision are included in Column 7. There also may be some variation of plus or minus 0.1 percentage point due to rounding.

F. Effects of the Expiration of the 3-Year Provision Allowing Urban Hospitals That Were Converted to Rural as a Result of the FY 2005 Labor Market Area Changes to Maintain the Wage Index of the Urban Labor Market Area in Which They Were Formerly Located (Column 5)

The policy adopted in FY 2005 for urban hospitals that became rural under the new labor market area definitions is to expire in FY 2008. In FY 2005, we adopted a policy that allowed urban hospitals that became rural under the new labor market area regions to maintain the wage index assignment of the MSA where they were located for the 3-year period FY 2005, FY 2006, and FY 2007. Beginning in FY 2008, these hospitals will receive their statewide rural wage index or their FY 2008 MGCRB reclassified wage index. Column 5 shows the impact of the expiration of the labor market area transition for those hospitals that were urban under the old labor market area designations and are now considered rural hospitals. The rural hospital row shows a 0.2 percent decrease from the end of the provision as these hold harmless hospitals are now considered geographically rural and are now receiving the wage index of the MSA where they are currently located.

G. Effects of MGCRB Reclassifications (Column 6)

Our impact analysis to this point has assumed hospitals are paid on the basis of their actual geographic location (with the exception of ongoing policies that provide that certain hospitals receive payments on other bases than where they are geographically located). The changes in Column 6 reflect the per case payment impact of moving from this baseline to a simulation incorporating the MGCRB decisions for FY 2008 which affect hospitals' wage index area assignments.

By February 28 of each year, the MGCRB makes reclassification determinations that will be effective for the next fiscal year, which begins on October 1. The MGCRB may approve a hospital's reclassification request for the purpose of using another area's wage index value. Hospitals may appeal denials of MGCRB decisions to the CMS Administrator. Further, hospitals have 45 days from publication of the IPPS rule in the **Federal Register** to decide whether to withdraw or terminate an approved geographic reclassification for the following year. This column reflects all MGCRB decisions, Administrator appeals and decisions of hospitals for FY 2008 geographic reclassifications.

The overall effect of geographic reclassification is required by section 1886(d)(8)(D) of the Act to be budget neutral. Therefore, we are applying an adjustment of 0.991695 to ensure that the effects of the section 1886(d)(10) reclassifications are budget neutral. (See section II.A. of the Addendum to this final rule with comment period.) Geographic reclassification generally benefits hospitals in rural areas. We estimate that geographic reclassification will increase payments to rural hospitals by an average of 1.8 percent.

H. Effects of the Adjustment to the Application of the Rural Floor (Column 7)

As discussed in section III.G. of the preamble of this final rule with comment period, section 4410 of Pub. L. 105–33 established the rural floor by requiring that the wage index for a hospital in any urban area cannot be less than the area wage index determined for the state's rural area. Since FY 1998, we have implemented this provision by adjusting the standardized amounts. In this final rule with comment period, we are changing how we apply budget neutrality to the rural floor beginning in FY 2008. Rather than applying a budget neutrality adjustment to the standardized amount, a uniform budget neutrality adjustment is applied to the wage index. Therefore, we are applying an adjustment to the wage index of 0.996660 (−0.33 percent) to ensure that the rural floor adjustments are budget neutral as indicated by the zero effect on payments to hospitals overall.

Column 7 shows the projected impact of change in the application of the rural floor. The column compares the post-reclassification FY 2008 wage index of providers before the rural floor adjustment and the post-reclassification FY 2008 wage index of providers with the rural floor adjustment. Only urban hospitals can benefit from the rural floor provision. Because the provision is budget neutral, all other hospitals (that is, all rural hospitals and those urban hospitals to which the adjustment is not made) will experience a decrease in payments due to the budget neutrality adjustment. We project rural hospitals will experience a 0.1 percent decrease in payments. We project hospitals located in other urban areas (populations of 1 million or fewer) will experience a 0.1 percent increase in payments. The rural floor will benefit 69 percent of the hospitals in New Hampshire (9) and 39 percent of the hospitals in Connecticut (13), explaining the average increase of 0.9 percent shown in the table for hospitals located in New England. The average increase among hospitals in the Pacific region is estimated at 0.6 percent and is explained by application of the rural floor to 62 percent of the hospitals in California (207) and 18 percent of the hospitals in Washington (9).

I. Effects of Application of the Imputed Rural Floor (Column 8)

The FY 2005 IPPS final rule (69 FR 49109) established a temporary imputed rural floor for all urban States from FY 2005 to FY 2007. The rural floor requires that an urban wage index cannot be lower than the wage index for any rural hospital in that State. Therefore, an imputed rural floor was established for States that do not have rural areas or rural IPPS hospitals. In this final rule, we are extending the imputed rural floor for one additional year through FY 2008.

Column 8 shows the effects of application the imputed rural floor. Only hospitals located in New Jersey had been affected by the provision. Therefore only urban providers in the Mid-Atlantic region (NJ) will experience an increase by 0.3 percent, from the imputed rural floor being applied in that State.

J. Effects of the Expiration of Section 508 of Pub. L. 108–173 (Column 9)

Section 508 of Pub. L. 108–173 will expire on September 30, 2007. As stated in the FY 2007 IPPS final rule (71 FR 48333), we established procedural rules under section 1886(d)(10)(D)(v) of the Act to address specific circumstances where individual and group reclassifications involve a section 508 hospital. In the final rule, the rules were designed to recognize the special circumstances of section 508 hospital reclassifications ending mid-year during FY 2007 and were intended to allow previously approved reclassifications to continue through March 31, 2007, and new section 1886(d)(10) reclassifications to begin April 1, 2007, upon the conclusion of the section 508 reclassifications. Under these procedural rules, some section 1886(d)(10) hospital reclassifications are only in effect for the second half of the fiscal year. However, Division B, Title I, section 106(a) of the MIEA–TRHCA (Pub. L. 109–432) extended any geographic reclassifications of hospitals that would expire on March 31, 2007, by 6 months until September 30, 2007. For FY 2008, the providers that had been reclassified under section 508 in FY 2007 will receive payment using the wage index for the area where they are currently located. The impact of the expiration of the policy is modeled in Column 8 of Table I. Section 508 of Pub. L. 108–173 was not a budget neutral provision of the statute. Its enactment increased total payments for Medicare inpatient hospital services. Therefore, relative to FY 2007, the expiration of section 508 of Pub. L. 108–173 will reduce Medicare inpatient hospital payments by an estimated 0.1 percent.

K. Effects of the Wage Index Adjustment for Out-Migration (Column 10)

Section 1886(d)(13) of the Act, as added by section 505 of Pub. L. 108–173, provides for an increase in the wage index for hospitals located in certain counties that have a relatively high percentage of hospital employees who reside in the county, but work in a different area with a higher wage index. Hospitals located in counties that qualify for the payment adjustment are to receive an increase in the wage index that is equal to a weighted average of the difference between the wage index of the resident county, post-reclassification and the higher wage index work area(s), weighted by the overall percentage of workers who are employed in an area with a higher wage index. With the out-migration adjustment, rural providers will experience a 0.1 percent increase in payments in FY 2008 relative to no adjustment at all. We included these additional payments to providers in the impact table shown above, and we estimate the impact of these providers receiving the out-migration increase to be approximately $26 million.

L. Effects of All Changes With CMI Adjustment Prior to Estimated Growth (Column 11)

Column 11 compares our estimate of payments per case between FY 2007 and FY 2008 with all changes reflected in this final rule with comment period for FY 2008, including a 0.988 adjustment to the payment rates to account for anticipated improvements in documentation and coding that is expected to increase case-mix. We generally apply an adjustment to the DRGs to ensure budget neutrality assuming constant utilization. However, with the 2-year transition to the MS–DRGs, the number of DRGs expands from 538 to 745. Therefore, the Office of the Actuary estimates an increase in the CMI due to improved coding and we have applied an additional adjustment to achieve budget neutrality. However, because we modeled the impact, including the adjustment for anticipated case-mix increase but not the actual case-mix increase itself in column 11, this column illustrates a total payment change that is less than what is anticipated to occur.

M. Effects of All Changes With CMI Adjustment and Estimated Growth (Column 12)

Column 12 compares our estimate of payments per case between FY 2007 and FY 2008, incorporating all changes reflected in this final rule with comment period for FY 2008 (including statutory changes). This column includes all of the policy changes and assumes the 1.2 percent increase in case-mix from improved documentation and coding will occur equally across all hospitals.

Column 12 reflects the impact of all FY 2008 changes relative to FY 2007, including those shown in Columns 2 through 10. The average increase for all hospitals is approximately 3.5 percent. This increase includes the effects of the 3.3 percent market basket update. It also reflects the 0.5 percentage point difference between the projected outlier payments in FY 2008 (5.1 percent of total DRG payments) and the current estimate of the percentage of actual outlier payments in FY 2007 (4.6 percent), as described in the introduction to this Appendix and the Addendum to this final rule with comment period. As a result, payments are projected to be 0.5 percentage points lower in FY 2007 than originally estimated, resulting in a 0.5 percentage point greater increase for FY 2008 than would otherwise occur. In addition, the impact of expiration of section 508 of Pub. L. 108–173 reclassification accounts for a 0.1 percent decrease in estimated payments. As stated earlier, section 1886(d)(13) of the Act provides for an increase in the wage index for hospitals located in certain counties that have a relatively high percentage of hospital employees who reside in the county, but work in a different area with a higher wage index. This provision of the statute is not budget neutral. Although the out-migration adjustment will increase payments to some hospitals in FY 2008 relative to not having an adjustment at all, the total number of hospitals receiving the adjustment will be less in FY 2008 than FY 2007, resulting in a 0.1 percent reduction in total IPPS payments. There might also be interactive effects among the various factors comprising the payment system that we are not able to isolate. For these reasons, the values in Column 12 may not equal the product of the percentage changes described above.

The overall change in payments per case for hospitals in FY 2008 is estimated to increase by 3.5 percent. Hospitals in urban areas will experience an estimated 3.8 percent increase in payments per case compared to FY 2007. Hospitals in large urban areas will experience an estimated 4.3 percent increase and hospitals in other urban areas will experience an estimated 3.2 percent increase in payments per case in FY 2008. Hospital payments per case in rural areas are estimated to increase 1.2 percent. The increases that are larger than the national average for larger urban areas and smaller than the national average for other urban and rural areas are largely attributed to the differential impact of adopting MS–DRGs.

Among urban census divisions, the largest estimated payment increases will be 5.2 percent in the Pacific region (generally attributed to MS–DRGs, wage data and application of the rural floor) and 4.2 percent in Puerto Rico (mostly due to MS–DRGs). The smallest urban increase is estimated at 3.3 percent in the East South Central region (because of MS–DRGs, new wage data, MGCRB reclassification and application of the rural floor).

Among rural regions in Column 12, the providers in the West South Central region experience an estimated decrease in payments by 0.1 percent (mostly due to MS–DRGs). The Pacific and South Atlantic regions will have the highest increases among rural regions with 2.5 and 2.0 percent estimated increases, respectively. Again, increases in rural areas are generally less than the national average due to the adoption of MS–DRGs.

Among special categories of rural hospitals in Column 12, the SCH providers will receive an estimated increase in payments of 0.2 percent, and the RRCs will experience an estimated increase in payments by 2.7 percent.

Urban hospitals reclassified for FY 2008 are anticipated to receive an increase of 3.6 percent, while urban hospitals that are not reclassified for FY 2008 are expected to receive an increase of 3.9 percent. Rural hospitals reclassifying for FY 2008 are anticipated to receive a 1.8 percent payment increase.

N. Effects of Policy on Payment Adjustments for Low-Volume Hospitals

For FY 2008, we are continuing to apply the volume adjustment criteria we specified in the FY 2005 IPPS final rule (69 FR 49099). We expect that two providers will receive the low-volume adjustment for FY 2008. We estimate the impact of these providers receiving the additional 25-percent payment increase to be approximately $36,000.

O. Impact Analysis of Table II

Table II presents the projected impact of the changes for FY 2008 for urban and rural hospitals and for the different categories of hospitals shown in Table I. It compares the estimated payments per case for FY 2007 with the average estimated payments per case for FY 2008, as calculated under our models. Thus, this table presents, in terms of the average dollar amounts paid per discharge, the combined effects of the changes presented in Table I. The percentage changes shown in the last column of Table II equal

the percentage changes in average payments from Column 12 of Table I.

TABLE II.—IMPACT ANALYSIS OF CHANGES FOR FY 2008 OPERATING PROSPECTIVE PAYMENT SYSTEM

[Payments per case]

	Number of Hospitals	Average FY 200 Payment Per Case [1]	Average FY 2008 Payment Per Case [1]	All FY 2008 Changes
	(1)	(2)	(3)	(4)
All hospitals	3534	$8,960	$9,278	3.5
By Geographic Location:				
Urban hospitals	2539	$9,304	$9,663	3.9
Large urban areas (populations over 1 million)	1406	$9,702	$10,122	4.3
Other urban areas (populations of 1 million or fewer)	1133	$8,826	$9,110	3.2
Rural hospitals	995	$6,993	$7,081	1.2
Bed Size (Urban):				
0–99 beds	630	$7,148	$7,297	2.1
100–199 beds	851	$7,882	$8,162	3.6
200–299 beds	480	$8,777	$9,100	3.7
300–499 beds	411	$9,722	$10,132	4.2
500 or more beds	167	$11,695	$12,179	4.1
Bed Size (Rural):				
0–49 beds	337	$6,049	$6,026	−0.4
50–99 beds	372	$6,480	$6,539	0.9
100–149 beds	173	$6,816	$6,925	1.6
150–199 beds	68	$7,598	$7,715	1.5
200 or more beds	45	$8,686	$8,869	2.1
Urban by Region:				
New England	122	$9,748	$10,098	3.6
Middle Atlantic	350	$10,177	$10,533	3.5
South Atlantic	390	$8,796	$9,144	4
East North Central	395	$8,868	$9,193	3.7
East South Central	166	$8,428	$8,706	3.3
West North Central	157	$9,016	$9,329	3.5
West South Central	355	$8,791	$9,128	3.8
Mountain	153	$9,393	$9,728	3.6
Pacific	398	$11,082	$11,657	5.2
Puerto Rico	53	$4,364	$4,546	4.2
Rural by Region:				
New England	23	$9,613	$9,727	1.2
Middle Atlantic	72	$7,367	$7,437	1
South Atlantic	173	$6,557	$6,688	2
East North Central	122	$7,418	$7,499	1.1
East South Central	177	$6,355	$6,463	1.7
West North Central	115	$7,578	$7,652	1
West South Central	199	$6,318	$6,313	−0.1
Mountain	77	$7,536	$7,605	0.9
Pacific	37	$8,552	$8,764	2.5
By Payment Classification:				
Urban hospitals	2578	$9,284	$9,641	3.8
Large urban areas (populations over 1 million)	1425	$9,688	$10,107	4.3
Other urban areas (populations of 1 million or fewer)	1153	$8,798	$9,081	3.2
Rural areas	956	$7,053	$7,141	1.2
Teaching Status:				
Non-teaching	2480	$7,607	$7,835	3
Fewer than 100 Residents	815	$9,036	$9,369	3.7
100 or more Residents	239	$12,934	$13,499	4.4
Urban DSH:				
Non-DSH	859	$8,109	$8,335	2.8
100 or more beds	1512	$9,778	$10,179	4.1
Less than 100 beds	355	$6,616	$6,813	3
Rural DSH:				
SCH	384	$6,906	$6,932	0.4
RRC	203	$7,574	$7,712	1.8
100 or more beds	46	$6,013	$6,164	2.5
Less than 100 beds	175	$5,344	$5,423	1.5
Urban teaching and DSH:				
Both teaching and DSH	807	$10,700	$11,150	4.2
Teaching and no DSH	186	$8,821	$9,097	3.1
No teaching and DSH	1060	$8,006	$8,309	3.8
No teaching and no DSH	525	$7,646	$7,867	2.9
Rural Hospital Types:				

TABLE II.—IMPACT ANALYSIS OF CHANGES FOR FY 2008 OPERATING PROSPECTIVE PAYMENT SYSTEM—Continued

[Payments per case]

	Number of Hospitals	Average FY 200 Payment Per Case [1]	Average FY 2008 Payment Per Case [1]	All FY 2008 Changes
	(1)	(2)	(3)	(4)
RRC	194	$7,606	$7,813	2.7
SCH	367	$7,437	$7,455	0.2
MDH	150	$6,489	$6,529	0.6
SCH and RRC	99	$8,713	$8,780	0.8
MDH and RRC	8	$8,373	$8,383	0.1
Type of Ownership:				
Voluntary	2064	$9,094	$9,409	3.5
Proprietary	823	$8,144	$8,458	3.9
Government	597	$9,211	$9,542	3.6
Medicare Utilization as a Percent of Inpatient Days:				
0–25	230	$12,615	$13,304	5.5
25–50	1289	$10,114	$10,545	4.3
50–65	1451	$7,880	$8,105	2.9
Over 65	440	$7,186	$7,312	1.8
Hospitals Reclassified by the Medicare Geographic Classification Reviewboard:				
FY 2008 Reclassifications:				
All Reclassified Hospitals FY 2008	757	$8,650	$8,915	3.1
All Non-Reclassified Hospitals FY 2008	2777	$9,055	$9,389	3.7
Urban Reclassified Hospitals FY 2008:	393	$9,286	$9,623	3.6
Urban Non-reclassified Hospitals FY 2008:	2145	$9,308	$9,671	3.9
Rural Reclassified Hospitals FY 2008:	364	$7,491	$7,624	1.8
Rural Nonreclassified Hospitals FY 2008:	569	$6,327	$6,340	0.2
All Section 401 Reclassified Hospitals:	29	$8,245	$8,270	0.3
Other Reclassified Hospitals (Section 1886(d)(8)(B))	63	$6,683	$6,809	1.9
Former Section 508 Hospitals	107	$9,745	$9,795	0.5
Specialty Hospitals:				
Cardiac Specialty Hospitals	22	$10,707	$10,799	0.9

[1] These payment amounts per case do not reflect any estimates of annual case-mix increase.

VII. Effects of Other Policy Changes

In addition to those policy changes discussed above that we are able to model using our IPPS payment simulation model, we are making various other changes in this final rule with comment period. Generally, we have limited or no specific data available with which to estimate the impacts of these changes. Our estimates of the likely impacts associated with these other changes are discussed below.

A. Effects of Policy on Hospital-Acquired Conditions, Including Infections

In section II.F. of the preamble of this final rule with comment period, we discuss our implementation of section 5001(c) of Pub. L. 109–171, which requires the Secretary to identify, by October 1, 2007, at least two conditions that are (a) high cost or high volume or both, (2) result in the assignment of a case to a DRG that has a higher payment when present as a secondary diagnosis, and (c) could reasonably have been prevented through application of evidence-based guidelines. For discharges occurring on or after October 1, 2008, hospitals will not receive additional payment for cases in which one of the selected conditions was not present on admission. That is, the case will be paid as though the secondary diagnosis was not present. However, the statute also requires the Secretary to continue counting the condition as a secondary diagnosis that results in a higher IPPS payment when doing the budget neutrality calculations for DRG reclassifications and recalibration. Therefore, we do our budget neutrality calculations as though the payment provision did not apply but Medicare will make a lower payment to the hospital for the specific case that includes the secondary diagnosis. Thus, the provision will result in cost savings to the Medicare program.

We note that the provision will only apply when the selected conditions are the only secondary diagnosis present on the claim that will lead to higher payment. Therefore, if a nonselected secondary diagnosis that leads to the same higher payment is on the claim, the case will continue to be assigned to the higher paying DRG and there will be no savings to Medicare from the case. Patients will generally have multiple secondary diagnoses during a hospital stay. Patients having one MCC or CC will frequently have additional conditions that also lead to higher payment. Therefore, in only a small percentage of the cases will the patient have only one secondary diagnosis that would lead to higher payment. The statute does not allow the payment provision to go into effect until October 1, 2008. For this reason, there will be no saving for FY 2008. Any savings associated with this provision will not be realized until FY 2009. We estimate this provision will save $20 million per year beginning October 1, 2008. Our savings estimates for the next 5 fiscal years are shown below:

Year	Savings
FY 2008	$0
FY 2009	20
FY 2010	20
FY 2011	20
FY 2012	20

B. Effects of MS–LTC–DRG Reclassifications and Relative Weights for LTCHs

In section II.I. of the preamble to this final rule with comment period, we discuss the adoption of the MS–LTC—DRGs (Version 25. of the CMS GROUPER). We also discuss that we are implementing a 2-year transition to MS–LTC–DRGs, in which we determined transition blended MS–LTC–DRG relative weights for FY 2008. We established in the RY 2008 LTCH PPS final rule (72 FR 26880 through 26884), beginning with the update for FY 2008, that the annual update to the classification and relative weights under the LTCH PPS will be done in a budget neutral manner, such that estimated aggregate LTCH PPS payments will be unaffected; that is, they will be neither greater than nor less than the estimated aggregate LTCH PPS payments that would have been made without the MS–LTC–DRG classification and relative weight changes. However, if the budget neutrality policy had not been adopted, we would not have multiplied each MS–LTC–DRG transition blended relative weight by 1.020905 in the first step of the budget

neutrality process (normalization), and we would not have applied a budget neutrality factor of 0.996467 to the transition blended relative weights after normalization based on the most recent available claims data (FY 2006 MedPAR files) for the 376 LTCHs in our database. With the adoption of this budget neutrality policy, we estimate that with the changes to the MS–LTC–DRG classifications and relative weights for FY 2008, there will be no change in aggregate LTCH PPS payments. In applying the budget neutrality adjustment described above, we assumed constant utilization.

C. Effects of New Technology Add-On Payments

In section II.J. of the preamble to this final rule, we discuss add-on payments for new medical services and technologies. As explained in that section, add-on payments for new technology under section 1886(d)(5)(K) of the Act are not required to be budget neutral. As discussed earlier in this final rule with comment period, we are not approving Wingspan® for new technology add-on payments for FY 2008. Thus, we will not make any IPPS add-on payments for this technology in FY 2008. In addition, for FY 2008, we have discontinued new technology add-on payments for GORE TAG, Restore®, and X STOP. In the FY 2007 IPPS final rule (71 FR 48344), we estimated that FY 2007 IPPS new technology add-on payments would be $16.61 million, $6.01 million, and $9.35 million, respectively, for these technologies. We have no additional information to further refine these estimates. Therefore, we estimate that Medicare's new technology add-on payments will decline by approximately $32 million (the sum of our estimates for FY 2007) in FY 2008 compared to FY 2007.

D. Effects of Requirements for Hospital Reporting of Quality Data for Annual Hospital Payment Update

In section IV.A. of the preamble of this final rule with comment period, we discuss the requirements for hospitals to report quality data in order for hospitals to receive the full annual hospital payment update for FY 2008 and FY 2009. We also note that, for the FY 2008 payment update, hospitals must pass our validation requirement of a minimum of 80 percent reliability, based upon our chart-audit validation process, for the first three quarters of data from CY 2006. These data were due to the QIO Clinical Warehouse by August 15, 2006 (first quarter CY 2006 discharges), November 15, 2006 (second quarter CY 2006 discharges), and February 15, 2007 (third quarter CY 2006 discharges). We have continued our efforts to ensure that QIOs provide assistance to all hospitals that wish to submit data. In the preamble of this final rule with comment period, we are finalizing additional validation criteria to ensure that the quality data being sent to CMS are accurate. The requirement of 5 charts per hospital will result in approximately 21,500 charts per quarter total submitted to the agency. We reimburse hospitals for the cost of sending charts to the Clinical Data Abstraction Center (CDAC) at the rate of 12 cents per page for copying and approximately $4.00 per chart for postage. Our experience shows that the average chart received at the CDAC is approximately 150 pages. Thus, the agency will have expenditures of approximately $473,200 per quarter to collect the charts. Given that we reimburse for the data collection effort, we believe that a requirement for five charts per hospital per quarter represents a minimal burden to the participating hospital.

E. Effects of Policy on Cancellation of Classification of Acquired Rural Status and Rural Referral Centers

In section IV.C.2. of the preamble of this final rule with comment period, we are revising our regulations to change the effective date of cancellation of acquired rural status for hospitals classified as rural referral centers based on acquired rural status. The current effective date is the hospital's next full cost reporting period following the date of its request for cancellation. The new effective date will be the beginning of the Federal fiscal year following both the date of the hospital's request for cancellation and at least one 12-month cost reporting period in which it has been in acquired rural status. Currently, there are about 100 IPPS hospitals that have acquired rural status and about 7 hospitals that became rural referral centers based on acquired rural status. During this fiscal year (FY 2007), we have only received requests for cancellations from about five hospitals, all of which became rural referral centers after acquiring rural status. However, this number may increase if the current policy is not changed. We anticipate that the policy change will not have a significant impact on IPPS hospitals.

F. Effects of Policy on Payment for IME and Direct GME

In section IV.D.3. of the preamble of this final rule with comment period, we discuss our policy related to whether vacation and sick leave as well as orientation should be included in the FTE count for IME and direct GME payment purposes. We had proposed that, for cost reporting periods beginning on or after October, 1, 2007, for direct GME and IME, time spent by residents on vacation or sick leave be removed from the total time considered to constitute an FTE resident. In addition, we proposed to continue our existing policy to count time spent by residents in orientation activities for both IME and direct GME payment purposes and proposed to change our policy to begin counting time spent by residents in orientation activities in nonhospital settings for purposes of both IME and direct GME payments (where the hospital otherwise met the regulatory requirements to count time spent by residents in the nonhospital setting). However, as explained in section IV.D.3. of the preamble of this final rule with comment period, because of concerns related to implementation issues raised by the commenters, at this time we are not finalizing our proposal to remove vacation and sick leave from the total time considered to constitute an FTE resident. Therefore, there is no impact for this provision. In addition, there is no impact from the clarification of the policy for orientation time because it is not a change in policy. We anticipate the additional time counted by hospitals for orientation activities in nonhospital settings under the revised policy will be negligible and will have minimal impact.

G. Effects of Policy Changes Relating to Emergency Services Under EMTALA During an Emergency Period

In section IV.F. of the preamble of this final rule with comment period, we are amending the EMTALA regulations regarding EMTALA implementation in emergency areas during an emergency period. Section 1135 of the Act authorizes the Secretary to temporarily waive or modify the application of several requirements and their implementing regulations as they relate to actions taken in an emergency area during an emergency period. The EMTALA regulations (§ 489.24(a)(2)) now specify that sanctions for inappropriate transfer during a national emergency do not apply to a hospital with a dedicated emergency department located in an emergency area.

To make our regulations better reflect the scope of the authority under section 1135 of the Act, we are revising them to clarify that such waivers also may apply to sanctions for the redirection or relocation of an individual to an alternate location to receive a medical screening examination where that direction or relocation occurs pursuant to a State emergency preparedness plan. We also are revising the regulations to incorporate changes made by the Pandemic and All-Hazards Preparedness Act. That legislation amended section 1135 of the Act to state that, in the case of a public health emergency that involves a pandemic infectious disease, sanctions for the direction or relocation of an individual to an alternative location for screening may be waived based on either a State emergency preparedness plan or a State pandemic preparedness plan, whichever applies in the State. In addition, section 1135 of the Act was amended to create an exception to the otherwise applicable 72-hour limitation on the duration of waivers or modifications of sanctions for EMTALA violations in cases where a public health emergency involves a pandemic infectious disease (such as pandemic influenza).

As described more fully earlier in this preamble, these changes are not discretionary and do not impose any substantive new requirements. On the contrary, they merely update our regulations to make them consistent with current statutory requirements. Because of this, we are estimating no impact on Medicare expenditures and no significant impact on hospitals with emergency departments.

H. Effects of Policy on Disclosure of Physician Ownership in Hospitals and Patient Safety Measures

In section IV.G. of the preamble of this final rule with comment period, we discuss our adoption of a requirement relating to disclosure of physician ownership in hospitals and to increase patient safety measures. In the strategic and implementing

plan included in our ''Final Report to the Congress and Strategic and Implementing Plan'' required under section 5006 of the Deficit Reduction Act of 2005, we stated that we would adopt a disclosure requirement that would require hospitals to disclose to patients whether they are physician-owned and, if so, the names of the physician-owners. In addition, we recognize that patients should be made aware of whether or not a physician is present in the hospital at all times, and the hospital's plans to address patients' emergency medical conditions when a physician is not present.

In section IX.B. of the preamble of this final rule with comment period, we have revised our proposed estimate of the cost to affected hospitals of these disclosures to more accurately reflect the volume of disclosures anticipated. Despite these changes, we continue to believe this final rule with comment period change will impose only minimal additional costs on hospitals. We believe the cost of implementing these provisions borne by hospitals will be limited to the ongoing cost of providing written notices to patients. In addition, the changes concerning disclosure of physician ownership in hospitals are consistent with current practices of members of the physician-owned specialty hospital associations. Therefore, we do not believe that these changes will have any significant economic impact on hospitals.

I. Effects of Implementation of Rural Community Hospital Demonstration Program

In section IV.H. of the preamble to this final rule with comment period, we discuss our implementation of section 410A of Pub. L. 108–173 that required the Secretary to establish a demonstration that will modify reimbursement for inpatient services for up to 15 small rural hospitals. Section 410A(c)(2) requires that ''in conducting the demonstration program under this section, the Secretary shall ensure that the aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration program under this section was not implemented.'' As discussed in section IV.H. of the preamble to this final rule with comment period, we are satisfying this requirement by adjusting national IPPS rates by a factor that is sufficient to account for the added costs of this demonstration. We estimate that the average additional annual payment for FY 2008 that will be made to each participating hospital under the demonstration will be approximately $1,075,765. We based this estimate on the recent historical experience of the difference between inpatient cost and payment for hospitals that are participating in the demonstration. For the 9 participating hospitals, the total annual impact of the demonstration program is estimated to be $9,681,893. The adjustment factor to the Federal rate used in calculating Medicare inpatient prospective payments as a result of the demonstration is 0.999903.

J. Effects of Policy on Services Furnished to Beneficiaries in Custody of Penal Authorities

In section VII. of the preamble of this final rule with comment period, we discuss our revision of our regulations relating to the special conditions under which Medicare payment may be made for services furnished to individuals in custody of penal authorities. We are indicating that, for purposes of Medicare payment, individuals who are in custody include, but are not limited to, individuals who are under arrest, incarcerated, imprisoned, escaped from confinement, under supervised release, on medical furlough, required to reside in mental health facilities, required to reside in halfway houses, required to live under home detention, or confined completely or partially in any way under a penal statute or rule. This definition is in accordance with how custody has been defined by Federal courts for purposes of the habeas corpus protections of the Constitution and is consistent with current CMS policy. We anticipate that this change will have no measurable impact on Medicare expenditures.

VIII. Impact of Changes in the Capital IPPS

A. General Considerations

Fiscal year (FY) 2001 was the last year of the 10-year transition period established to phase in the PPS for hospital capital-related costs. During the transition period, hospitals were paid under one of two payment methodologies: fully prospective or hold harmless. Under the fully prospective methodology, hospitals were paid a blend of the capital Federal rate and their hospital-specific rate (see § 412.340). Under the hold-harmless methodology, unless a hospital elected payment based on 100 percent of the capital Federal rate, hospitals were paid 85 percent of reasonable costs for old capital costs (100 percent for SCHs) plus an amount for new capital costs based on a proportion of the capital Federal rate (see § 412.344). As we state in section V. of the preamble of this final rule with comment period, with the 10-year transition period ending with hospital cost reporting periods beginning on or after October 1, 2001 (FY 2002), beginning in FY 2002 capital prospective payment system payments for most hospitals are based solely on the capital Federal rate. Therefore, we no longer include information on obligated capital costs or projections of old capital costs and new capital costs, which were factors needed to calculate payments during the transition period, for our impact analysis.

In accordance with § 412.312, the basic methodology for determining a capital PPS payment includes a large urban add-on adjustment. However, as discussed above and in section V. of the preamble of this final rule with comment period, we are eliminating the large urban add-on adjustment to capital IPPS payments in FY 2008. The basic methodology for calculating capital IPPS payments in FY 2008 is as follows: (Standard Federal Rate) × (DRG weight) × (GAF) × (COLA for hospitals located in Alaska and Hawaii) × (1 + Disproportionate Share Adjustment Factor + IME Adjustment Factor, if applicable).

In addition, hospitals may also receive outlier payments for those cases that qualify under the threshold established for each fiscal year.

The data used in developing the impact analysis presented below are taken from the March 2007 update of the FY 2006 MedPAR file and the March 2007 update of the Provider-Specific File that is used for payment purposes. Although the analyses of the changes to the capital prospective payment system do not incorporate cost data, we used the March 2007 update of the most recently available hospital cost report data (FYs 2004 and 2005) to categorize hospitals. Our analysis has several qualifications. We use the best data available and make assumptions about case-mix and beneficiary enrollment as described below. In addition, as discussed in section III. of the Addendum to this final rule with comment period, we are adjusting the capital rates to account for improvements in documentation and coding under the MS–DRGs in FY 2008. Furthermore, due to the interdependent nature of the IPPS, it is very difficult to precisely quantify the impact associated with each change. In addition, we draw upon various sources for the data used to categorize hospitals in the tables. In some cases (for instance, the number of beds), there is a fair degree of variation in the data from different sources. We have attempted to construct these variables with the best available sources overall. However, for individual hospitals, some miscategorizations are possible.

Using cases from the March 2007 update of the FY 2006 MedPAR file, we simulated payments under the capital PPS for FY 2007 and FY 2008 for a comparison of total payments per case. Any short-term, acute care hospitals not paid under the general IPPS (Indian Health Service hospitals and hospitals in Maryland) are excluded from the simulations.

As we explain in section III.A. of the Addendum to this final rule with comment period, payments are no longer made under the regular exceptions provision under §§ 412.348(b) through (e). Therefore, we no longer use the actuarial capital cost model (described in Appendix B of the August 1, 2001 proposed rule (66 FR 40099)). We modeled payments for each hospital by multiplying the capital Federal rate by the GAF and the hospital's case mix. We then added estimated payments for indirect medical education, disproportionate share, large urban add-on, and outliers, if applicable. (We note that, consistent with the elimination of the large urban add-on beginning in FY 2008, discussed in section V.B. of the preamble of this final rule with comment period, such estimated payments under this policy are only reflected in the payments we modeled for FY 2007 and were not included in the payments we modeled for FY 2008.) For purposes of this impact analysis, the model includes the following assumptions:

- We estimate that the Medicare case mix index will increase by 1.0 percent in both FYs 2007 and 2008. (We note that this does not reflect the adjustment to the capital rates to account for assumed growth in case mix due to improvement in documentation and coding under the MS–DRGs, as discussed in section III. of the Addendum of this final rule with comment period.)
- We estimate that the Medicare discharges will be 13.1 million in FY 2007

and 13.4 million in FY 2008 for an estimated 2.3 percent increase from FY 2007 to FY 2008.

- The capital Federal rate was updated beginning in FY 1996 by an analytical framework that considers changes in the prices associated with capital-related costs and adjustments to account for forecast error, changes in the case-mix index, allowable changes in intensity, and other factors. As discussed in section V. of the preamble and section III.A. of the Addendum to this final rule with comment period, the FY 2008 update for all hospitals is 0.9 percent.
- In addition to the FY 2008 update factors, the FY 2008 capital Federal rate for both urban and rural hospitals was calculated based on a GAF/DRG budget neutrality factor of 0.9997, an outlier adjustment factor of 0.9517, and an exceptions adjustment factor of 0.9997.
- For FY 2008, as discussed in section V. of the preamble and section III.A. of the Addendum to this final rule with comment period, the FY 2008 capital rates for all hospitals was further adjusted by a factor of 0.988 (or 1.2 percent) to maintain budget neutrality for the implementation of the MS–DRGs by eliminating the effect of changes in coding or classification of discharges that do not reflect real case-mix changes.

B. Results

We used the actuarial model described above to estimate the potential impact of our changes for FY 2008 on total capital payments per case, using a universe of 3,534 hospitals. As described above, the individual hospital payment parameters are taken from the best available data, including the March 2007 update of the FY 2006 MedPAR file, the March 2007 update to the PSF, and the most recent cost report data from the March 2007 update of HCRIS. In Table III, we present a comparison of total payments per case for FY 2007 compared to FY 2008 based on the FY 2008 payment policies. Column 2 shows estimates of payments per case under our model for FY 2007. Column 3 shows estimates of payments per case under our model for FY 2008. Column 4 shows the total percentage change in payments from FY 2007 to FY 2008. The change represented in Column 4 includes the 0.9 percent update to the capital Federal rate for all hospitals, a 1.0 percent increase in case mix, changes in the adjustments to the capital Federal rate (for example, the effect of the hospital wage index on the GAF), reclassifications by the MGCRB, and the additional 1.2 percent reduction to all of the rates to account for improvements in documentation and coding or other changes in coding that do not reflect real changes in case mix for implementation of the MS–DRGs. The comparisons are provided by: (1) Geographic location; (2) region; and (3) payment classification.

The simulation results show that, on average, capital payments per case can be expected to increase 0.6 percent in FY 2008. In addition to the 0.9 percent update to the capital Federal rate, this projected increase in capital payments per case can be attributed to the implementation of the MS–DRGs, including the transition relative weights, as discussed in sections II.B. through E. of the preamble of this final rule with comment period.

The results of our comparisons by geographic location and by region are consistent with the results we expected after eliminating the large urban add-on adjustment. The geographic comparison shows that all urban hospitals are expected to experience a 0.6 percent increase in capital IPPS payments per case, while large urban areas are expected to experience no change in capital IPPS payments per case. Capital IPPS payments per case for rural hospitals are expected to increase 0.3 percent. The difference is mostly due to the MS–DRGs. Specifically, based on existing hospital claims data, under the MS–DRGs, the better recognition of severity of illness is expected to increase payments to urban hospitals that treat a more acutely ill mix of patients. Similarly, however, the improved recognition of severity of illness will decrease payments to rural hospitals because they are treating less severely ill patients. Therefore, we project a lower increase in estimated payments for rural hospitals due to the DRG changes as compared to urban hospitals. In addition to the effect of the DRG changes, the capital impact is also somewhat affected by the wage-index changes because the GAF values are derived from the wage index. Furthermore, the outlier threshold also affects payments. Because the FY 2008 outlier threshold is lower than the FY 2007 outlier threshold, payments will increase, further explaining why, after eliminating the large urban add-on adjustment of 3.0 percent, we estimate no change in payments from FY 2007 to FY 2008 for large urban hospitals. For rural hospitals, another factor contributing to the smaller increase in payments for rural hospitals is the expiration of the 3-year hold harmless provision for urban hospitals that were converted to rural under the CBSAs in FY 2005. The policy allowed urban hospitals under the old labor market area designations that became rural under the CBSAs to receive payment using the wage index of the MSA where they were previously classified as urban for 3 years: FY 2005 through FY 2007. Beginning in FY 2008, these rural hospitals will receive the wage index for the area that they are currently located in. As a result, rural hospitals will experience a smaller increase in payments than urban hospitals because of the addition of these formerly urban hospitals.

More than half of all regions are estimated to experience an increase in total capital payments per case from FY 2007 to FY 2008. These increases vary by region and range from a 2.4 percent increase in the Pacific rural region to a 0.3 percent increase in the East North Central urban region, the Middle Atlantic rural region, and Puerto Rico. Two urban regions are projected to experience a decrease in capital payments with the difference mostly due to changes in the GAF and the elimination of the large urban add on adjustment: −0.6 percent in the Middle Atlantic urban region and −0.2 percent in the New England urban region. In the rural regions experiencing a decrease in total capital payments per case, the range is from a 0.8 percent decrease in the West South Central rural region to a 0.1 percent decrease in the East North Central rural region. For most of the rural regions projected to experience a decrease in capital payments, it is mostly due to changes in the GAF, as well as changes due to the adoption of the MS–DRGs. The change in payments per case for all hospitals is 0.6 percent.

By type of ownership, voluntary hospitals are estimated to experience an increase of 0.3 percent in capital payments per case, while both proprietary and government hospitals are estimated to experience a 1.2 percent increases in payments. Voluntary hospitals are projected to have a slightly smaller increase in capital payments than government and proprietary hospitals, mostly due to the elimination of the large urban add-on adjustment and changes in the GAF.

Section 1886(d)(10) of the Act established the MGCRB. Before FY 2005, hospitals could apply to the MGCRB for reclassification for purposes of the standardized amount, wage index, or both. Section 401(c) of Pub. L. 108–173 equalized the standardized amounts under the operating IPPS. Therefore, beginning in FY 2005, there is no longer reclassification for the purposes of the standardized amounts; however, hospitals still may apply for reclassification for purposes of the wage index for FY 2008. Reclassification for wage index purposes also affects the GAF because that factor is constructed from the hospital wage index.

To present the effects of the hospitals being reclassified for FY 2008, we show the average payments per case for reclassified hospitals for FY 2007. Rural nonreclassified hospitals are expected to have the largest decrease in payments of 0.4 percent, as compared to the 0.1 percent decrease for the other reclassified hospitals for FY 2008. This difference is mostly due to changes in the GAF. All urban nonreclassified hospitals and all rural reclassified hospitals are expected to experience an increase in payments of 0.7 percent, while all urban reclassified hospitals are expected to experience a 0.5 percent increase in capital payments per case. This difference is mostly due to the elimination of the large urban add-on as well as changes in the GAF.

TABLE III.—COMPARISON OF TOTAL PAYMENTS PER CASE

[FY 2007 Payments Compared To FY 2008 Payments]

	Number of hospitals	Average FY 2007 payments/case	Average FY 2008 payments/case	Change
By Geographic Location:				
All hospitals	3,534	748	752	0.6
Large urban areas (populations over 1 million)	1,406	830	829	0.0
Other urban areas (populations of 1 million of fewer)	1,133	737	748	1.5
Rural areas	995	520	521	0.3
Urban hospitals	2,539	788	793	0.6
0–99 beds	630	619	621	0.4
100–199 beds	851	674	678	0.6
200–299 beds	480	744	748	0.5
300–499 beds	411	818	824	0.8
500 or more beds	167	983	990	0.6

IX. Alternatives Considered

This final rule with comment period contains a range of policies. The preamble of this final rule with comment period provides descriptions of the statutory provisions that are addressed, identifies those policies when discretion has been exercised, presents rationale for our decisions and, where relevant, alternatives that were considered.

X. Overall Conclusion

The changes we are making in this final rule with comment period will affect all classes of hospitals. Some hospitals are expected to experience significant gains and others less significant gains, but overall hospitals are projected to experience positive updates in IPPS payments in FY 2008. Table I of section VI. of this Appendix demonstrates the estimated distributional impact of the IPPS budget neutrality requirements for DRG and wage index changes, and for the wage index reclassifications under the MGCRB. Table I also shows an overall increase of 3.5 percent in operating payments, an estimated increase of $3.56 billion, which includes hospital reporting of quality data program costs ($1.89 million) and all operating payment policies as described in section VI. of this Appendix. Capital payments are estimated to increase by 0.6 percent per case, as shown in Table III of section VIII. of this Appendix. Therefore, we project that capital payments will increase by $282 million in FY 2008 compared to FY 2007. The operating and capital payments should result in a net increase of $3.837 billion to IPPS providers. The discussions presented in the previous pages, in combination with the rest of this final rule with comment period, constitute a regulatory impact analysis.

XI. Accounting Statement

As required by OMB Circular A–4 (available at *http://www.whitehousegov/omb/circulars/a004/a-4.pdf),* in Table IV below, we have prepared an accounting statement showing the classification of the expenditures associated with the provisions of this final rule with comment period. This table provides our best estimate of the increase in Medicare payments to providers as a result of the changes to the IPPS presented in this final rule with comment period. All expenditures are classified as transfers to Medicare providers.

TABLE IV.—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES FROM FY 2007 TO FY 2008

Category	Transfers
Annualized Monetized Transfers.	$3.837 Billion.
From Whom to Whom	Federal Government to IPPS Medicare Providers.
Total	$3.837 Billion.

XII. Executive Order 12866

In accordance with the provisions of Executive Order 12866, the Office of Management and Budget reviewed this final rule with comment period.

Appendix B: Recommendation of Update Factors for Operating Cost Rates of Payment for Inpatient Hospital Services

I. Background

Section 1886(e)(4)(A) of the Act requires that the Secretary, taking into consideration the recommendations of the MedPAC, recommend update factors for inpatient hospital services for each fiscal year that take into account the amounts necessary for the efficient and effective delivery of medically appropriate and necessary care of high quality. Under section 1886(e)(5)(B) of the Act, we are required to publish update factors recommended by the Secretary in the proposed and final IPPS rules, respectively. Accordingly, we are publishing our final recommendations for the update factors for the IPPS standardized amount, the hospital-specific rates for SCHs and MDHs, and the rate-of-increase limits for hospitals and hospital units excluded from the IPPS, as well as LTCHS, IPFs, and IRFs. We also discuss our response to MedPAC's recommended update factors for inpatient hospital services.

II. Inpatient Hospital Update for FY 2008

Section 1886(b)(3)(B)(i)(XX) of the Act, as amended by section 5001(a) of Pub. L. 109–171, sets the FY 2008 percentage increase in the operating cost standardized amount equal to the rate-of-increase in the hospital market basket for IPPS hospitals in all areas, subject to the hospital submitting quality information under rules established by the Secretary in accordance with 1886(b)(3)(B)(viii) of the Act. For hospitals that do not provide these data, the update is equal to the market basket percentage increase less 2.0 percentage points. Consistent with current law, based on Global Insight, Inc.'s second quarter 2007 forecast of the FY 2008 market basket increase, the FY 2008 update to the standardized amount will be 3.3 percent (that is, the current estimate of the market basket rate-of-increase) for hospitals in all areas, provided the hospital submits quality data in accordance with our rules. For hospitals that do not submit quality data, the update to the standardized amount will be 1.3 percent (that is, the current estimate of the market basket rate-of-increase minus 2.0 percentage points).

Section 1886(b)(3)(B)(iv) of the Act sets the FY 2008 percentage increase in the hospital-specific rates applicable to SCHs and MDHs equal to the rate set forth in section 1886(b)(3)(B)(i) of the Act (that is, the same update factor as for all other hospitals subject to the IPPS). Therefore, the update to the hospital-specific rates applicable to SCHs and MDHs will be 3.3 or 1.3 percent depending upon whether the hospital submits quality data.

Section 1886(b)(3)(B)(ii) of the Act is used for purposes of determining the percentage increase in the rate-of-increase limits for children's and cancer hospitals. Section 1886(b)(3)(B)(ii) of the Act sets the percentage increase in the rate-of-increase limits equal to the market basket percentage

increase. In accordance with § 403.752(a) of the regulations, RNHCIs are paid under § 413.40, which also uses section 1886(b)(3)(B)(ii) of the Act to update the percentage increase in the rate-of-increase limits. Section 1886(j)(3)(C) of the Act addresses the increase factor for the Federal prospective payment rate of IRFs. Section 123 of Pub. L. 106–113, as amended by section 307(b) of Pub. L. 106–554, provides the statutory authority for updating payment rates under the LTCH PPS. As discussed below, for cost reporting periods beginning on or after October 1, 2006, LTCHs that are not defined as new under § 412.23(e)(4), and that had not elected to be paid under 100 percent of the Federal rate are paid 100 percent of the adjusted Federal PPS rate. Therefore, because no portion of LTCHs' prospective payments will be based on reasonable cost concepts for cost reporting periods beginning on or after October 1, 2006, we are not establishing a rate-of-increase percentage for FY 2008 for LTCHs to be used under § 413.40. In addition, section 124 of Pub. L. 106–113 provides the statutory authority for updating all aspects of the payment rates for IPFs. Under this broad authority, IPFs that are not defined as new under § 412.426(c) will be paid under a blend methodology for cost reporting periods beginning on or after January 1, 2005, and before January 1, 2008. The methodology blends the estimated Federal per diem payment amount and a facility-specific payment amount. The portion of the IPF PPS payment that is based on reasonable cost principles is updated in accordance with 42 CFR Part 413, which uses section 1886(b)(3)(B)(ii) of the Act to determine the percentage increase in the rate-of-increase limits. For the reasonable cost-based portion of an IPF's PPS blended payments, we are providing our current estimate of the excluded hospital market basket increase (3.3 percent) to update the target amounts. New IPFs are paid based on 100 percent of the Federal per diem payment amount.

Currently, children's hospitals, cancer hospitals, and RNHCIs are the remaining three types of hospitals still reimbursed under the reasonable cost methodology. We are providing our current estimate of the FY 2008 IPPS operating market basket percentage increase (3.3 percent) to update the target limits for children's hospitals, cancer hospitals, and RNHCIs.

Effective for cost reporting periods beginning on or after October 1, 2002, LTCHs have been paid under the LTCH PPS, which was implemented with a 5-year transition period for LTCHs not defined as new under § 412.23(e)(4) (hereafter referred to as ''existing''). (See 67 FR 55954.) An existing LTCH could have elected to be paid at 100 percent of the adjusted Federal prospective rate at the start of any of its cost reporting periods during the transition period. During this transition period, if an existing LTCH did not elect to be paid at 100 percent of the adjusted Federal prospective payment rate, it received a PPS payment that consisted of a blend of its reasonable cost-based payment and the Federal prospective payment rate. For cost reporting periods beginning on or after October 1, 2006, no portion of a LTCH's PPS payments can be based on reasonable cost concepts. Consequently, there is no need to update the target limit under § 413.40 effective October 1, 2007, for LTCHs.

In the RY 2008 LTCH PPS final rule (72 FR 26887 through 26890), we finalized an update of 0.71 percent (that is, the latest estimate of the market basket rate-of-increase of 3.2 percent minus an adjustment factor of 2.49 percentage points for case-mix growth due to improved coding) to the LTCH PPS Federal rate for RY 2008.

Effective for cost reporting periods beginning on or after January 1, 2005, IPFs are paid under the IPF PPS. IPF PPS payments are based on a Federal per diem rate that is derived from the sum of the average routine operating, ancillary, and capital costs for each patient day of psychiatric care in an IPF, adjusted for budget neutrality. For cost reporting periods beginning on or after January 1, 2005, and before January 1, 2008, existing IPFs (those not defined as ''new'' under § 412.426(c)) are paid based on a blend of the reasonable cost based PPS payments and the Federal per diem base rate. For cost reporting periods beginning on or after January 1, 2008, existing IPFs will be paid based on 100 percent of the Federal per diem rate. For purposes of the update factor for FY 2008, the portion of the IPF PPS transitional blend payment based on reasonable costs will be determined by updating the IPF's TEFRA limit by the current estimate of the excluded hospital market basket, which is estimated to be 3.3 percent. The update factor of 3.2 percent to the Federal per diem rate for July 1, 2007 through June 30, 2008, based on Global Insight, Inc.'s first quarter 2007 forecast of the RPL market basket increase, was provided in the rate year (RY) 2008 IPF PPS update notice (72 FR 25608).

IRFs are paid under the IRF PPS for cost reporting periods beginning on or after January 1, 2002. For cost reporting periods beginning on or after October 1, 2002 (FY 2003), and thereafter, the Federal prospective payments to IRFs are based on 100 percent of the adjusted Federal IRF prospective payment amount, updated annually (69 FR 45721). Under section 1886(j)(3)(C) of the Act, the FY 2008 IRF PPS update will equal 3.2 percent based on Global Insight, Inc.'s second quarter 2007 forecast of the RPL market basket increase with historical data through the first quarter of 2007.

III. Secretary's Final Recommendation

MedPAC is recommending an inpatient hospital update equal to the market basket rate of increase for FY 2008. MedPAC's rationale for this update recommendation is described in more detail below. Using the 2007 second quarter forecast from Global Insight, Inc. of the FY 2008 market basket increase and an adjustment factor based on the FY 2008 President's Budget, we are recommending an update to the standardized amount of 2.65 percent (that is, the market basket rate-of-increase of 3.3 percent minus an adjustment factor of 0.65 percentage points). We are recommending that this same update factor apply to SCHs and MDHs.Our rationale for this recommended update is described below.

In addition to making a recommendation for IPPS hospitals, in accordance with section 1886(e)(4)(A) of the Act, we are also recommending update factors for all other types of hospitals. Consistent with the President's Budget, we are recommending an update based on the IPPS market basket increase for children's hospitals, cancer hospitals, and RNHCIs of 3.3 percent, based on Global Insight, Inc.'s 2007 second quarter forecast of the IPPS operating market basket increase. For IPFs that are currently paid on a PPS blended payment basis, a portion of which is based on reasonable cost-principles and Federal prospective payment amounts, we are recommending an update factor of 3.3 percent for the portion of the payment that is based on reasonable costs. Consistent with the President's Budget, based on Global Insight, Inc.'s first quarter 2007 forecast of the RPL market basket increase, we are recommending an update equal to the market basket increase of 3.2 percent for the Federal per diem payment amount.

In the RY 2008 LTCH PPS final rule (72 FR 26887 through 26890), we implemented, and in this final rule with comment period recommend, an update of 0.71 percent (that is, the most recent estimate of the market basket rate-of-increase of 3.2 percent minus an adjustment factor of 2.49 percentage points for case-mix growth due to improved coding) to the Federal rate for RY 2008. Finally, consistent with the President's FY 2008 Budget, we are recommending that the Federal rate to the IRF PPS remain unchanged for FY 2008.

For fiscal years prior to FY 2008, section 1886(e)(3) of the Act directed the Secretary to report to the Congress an initial estimate of his recommendation of an appropriate payment inflation update for inpatient hospital services for the upcoming fiscal year not later than March 1. Section 1886(d)(4)(C) of the Act further required the Secretary to include recommendations with respect to adjustments to the DRG weighting factors in the March 1 Report to Congress. In addition, sections 1886(e)(4)(A) and (e)(5)(B) of the Act require that the Secretary recommend update factors in each of the IPPS proposed and final rules, taking into account MedPAC's recommendation. Thus, the statute required the Secretary to make update recommendations in both a March 1 Report to Congress, and later in the IPPS proposed and final rules. Historically, the only difference between the recommendation we provided in the March 1 Report to Congress and the IPPS proposed rule was the use of a later estimate of the market basket increase for the proposed rule. Section 106(c) of MIEA–TRHCA eliminated the requirement to make the Report to Congress recommending an update and adjustments to DRG weighting factors by March 1. In accordance with section 106(c) of MIEA–TRHCA, we are making the Secretary's only recommendation for an update factor in the IPPS rules.

IV. MedPAC Recommendation for Assessing Payment Adequacy and Updating Payments in Traditional Medicare

In its March 2007 Report to Congress, MedPAC assessed the adequacy of current payments and costs, and the relationship

between payments and an appropriate cost base, utilizing an established methodology used by MedPAC in the past several years.

MedPAC recommended an update to the hospital inpatient rates equal to the increase in the hospital market basket in FY 2008, concurrent with implementation of a quality incentive payment program. MedPAC also recommended that CMS put pressure on hospitals to control their costs rather than accommodate the current rate of cost growth.

MedPAC noted that, notwithstanding negative overall Medicare margins, most of the indicators of Medicare payment adequacy to hospitals are positive, including beneficiaries' access to care, increased access to capital, and service volume increases. MedPAC also noted that this recommendation ''should have no impact on beneficiary access to care and is not expected to affect providers' willingness and ability to provide care to Medicare beneficiaries.''

Response: We agree with MedPAC that hospitals should control costs rather than accommodate the current rate of growth. An update equal to less than the market basket will pressure hospitals to control their costs, consistent with MedPAC's recommendation. As MedPAC noted, rising hospital costs are resulting in margins for some hospitals that are below zero. As discussed in section II. of the preamble of this final rule with comment period, CMS is refining the DRGs to better account for severity illness and is basing the DRG weights on cost rather than charges. We believe that these refinements will better match Medicare payments to the cost of care and provide incentives for hospitals to be more efficient in controlling costs. For these reasons, we are recommending an inpatient hospital update equal to the market basket increase minus an adjustment factor of 0.65 percentage points for hospitals paid under the IPPS for FY 2008.

We note that, because the operating and capital prospective payment systems remain separate, we are continuing to use separate updates for operating and capital payments. The update to the capital payment rate is discussed in section III. of the Addendum to this final rule with comment period.

[FR Doc. 07–3820 Filed 8–1–07; 4:00 pm]

BILLING CODE 4120–01–P

Federal Register

Wednesday,
August 22, 2007

Part III

Department of the Interior

Fish and Wildlife Service

50 CFR Part 17

Endangered and Threatened Wildlife and Plants; Designation of Critical Habitat for the Bay Checkerspot Butterfly (*Euphydryas editha bayensis*); Proposed Rule

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

50 CFR Part 17

RIN 1018–AV24

Endangered and Threatened Wildlife and Plants; Designation of Critical Habitat for the Bay Checkerspot Butterfly (Euphydryas editha bayensis)

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Proposed rule.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), propose to revise currently designated critical habitat for the bay checkerspot butterfly (*Euphydryas editha bayensis*) under the Endangered Species Act of 1973, as amended (Act). In total, approximately 19,746 acres (ac) (7,990 hectares (ha)) fall within the boundaries of the proposed revised critical habitat designation. The proposed revision to critical habitat is located in San Mateo and Santa Clara Counties, California.

DATES: We will accept comments from all interested parties until October 22, 2007. We must receive requests for public hearings, in writing, at the address shown in the **ADDRESSES** section by October 9, 2007.

ADDRESSES: If you wish to comment on this proposed rule, you may submit your comments and materials concerning this proposal by any one of several methods:

1. You may mail or hand-deliver written comments and information to Susan Moore, Field Supervisor, U.S. Fish and Wildlife Service, Sacramento Fish and Wildlife Office, 2800 Cottage Way, Room W–2605, Sacramento, CA 95825.

2. You may send comments by electronic mail (e-mail) to *bcb_pch@fws.gov*. Please see the Public Comments Solicited section below for file format and other information about electronic filing.

3. You may fax your comments to the attention of Susan Moore, Field Supervisor at 916–414–6712.

4. You may go to the Federal Rulemaking Portal: *http://www.regulations.gov.* Follow the instructions for submitting comments.

Comments and materials received, as well as supporting documentation used in the preparation of this proposed rule, will be available for public inspection, by appointment, during normal business hours at the Sacramento Fish and Wildlife Office, 2800 Cottage Way, Room W–2605, Sacramento, CA 95825 (telephone 916–414–6600).

FOR FURTHER INFORMATION CONTACT: Field Supervisor, Sacramento Fish and Wildlife Office, 2800 Cottage Way, Room W–2605, Sacramento, CA 95825; telephone 916–414–6600; facsimile 916–414–6712. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 800–877–8339.

SUPPLEMENTARY INFORMATION:

Public Comments Solicited

We intend that any final action resulting from this proposal to revise the critical habitat designation for the bay checkerspot butterfly will be as accurate and as effective as possible. Therefore, we request comments or suggestions from the public, other concerned governmental agencies, the scientific community, industry, or any other interested party on this proposed rule. We particularly seek comments concerning:

(1) The reasons why we should or should not designate habitat as ''critical habitat'' under section 4 of the Act (16 U.S.C. 1531 et seq.), including whether there are areas we previously designated, but are not proposing for revised designation here, that should be designated as critical habitat.

(2) Specific information on the amount and distribution of bay checkerspot butterfly habitat.

(3) Specific information whether the features we have proposed as essential for the conservation of the species (Primary Constituent Elements) are adequate, and if not, what alternatives should be considered (see also item (13)).

(4) The reason why any areas that were occupied at the time of listing and that contain the features that are essential for the conservation of the species should or should not be included in the designation.

(5) The reason why any areas that were not occupied at the listing may be essential to the conservation of the species, and why such areas should or should not be designated as critical habitat.

(6) Specific information on dispersal areas important for habitat connectivity, in particular areas between Units 1 and 2 and between Unit 4 and the Santa Clara County Units, their role in the conservation and recovery of the species, and reasons why such areas should or should not be included in the critical habitat designation.

(7) Land use designations and current or planned activities in the subject areas and their possible impacts on proposed revised critical habitat.

(8) Any foreseeable economic, national security, or other potential impacts resulting from the proposed designation and, in particular, any impacts on small entities.

(9) Whether our approach to designating critical habitat could be improved or modified in any way to provide for greater public participation and understanding, or to assist us in accommodating public concerns and comments.

(10) Specific comments regarding occupancy and habitat quality of the proposed Pulgas Ridge Unit 2.

(11) The relative benefits of designation or exclusion of any lands from proposed revised critical habitat such as Habitat Conservation Plans (HCPs), Safe Harbor Agreements (SHA), or other areas that have management plans in place that provide for bay checkerspot butterfly conservation. We especially seek specific comments regarding the potential exclusion of areas within the final San Bruno Mountain HCP (proposed Unit 1), and areas within the planned Stanford HCP (proposed Unit 4), and the Santa Clara County HCP (proposed Units 5–12).

(12) Specific comments regarding population sizes of the bay checkerspot butterfly within those areas proposed for designation as revised critical habitat.

(13) Specific documentation regarding the use of water sources by the bay checkerspot butterfly, particularly to support or refute our proposed primary constituent element of water features (Primary Constituent Element 4), and whether water sources are essential for the conservation of the subspecies.

You may submit your comments and materials concerning this proposal by any one of several methods (see **ADDRESSES**). If you use e-mail to submit your comments, please include ''Attn: [species]'' in your e-mail subject header, preferably with, your name and return address in the body of your message. If you do not receive a confirmation from the system that we have received your e-mail, contact us directly by calling our Sacramento Fish and Wildlife Office at 916–414–6600. Please note that we must receive comments by the date specified in the **DATES** section in order to consider them in our final determination and that the e-mail address *bcb_pch@fws.gov* will be closed out at the termination of the public comment period.

Before including your address, phone number, e-mail address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us to withhold your personal identifying information from

public review, we cannot guarantee that we will be able to do so.

Comments and materials we receive, as well as supporting documentation we used in preparing this proposed rule, will be available for public inspection, by appointment, during normal business hours at the Sacramento Fish and Wildlife Office, 2800 Cottage Way, Room W–2605, Sacramento, CA 95825 (telephone 916–414–6600).

Background

It is our intent to discuss only those topics directly relevant to the designation of critical habitat in this proposed rule. For more information on the bay checkerspot butterfly, refer to the listing rule and previous determination of critical habitat published in the **Federal Register** on September 18, 1987 (52 FR 35366) and April 30, 2001 (66 FR 21450), respectively.

The September 18, 1987, final listing rule (52 FR 35366) described the bay checkerspot butterfly as occupying seven areas in San Mateo and Santa Clara counties: (1) San Bruno Mountain; (2) Pulgas Ridge; (3) Edgewood Park; (4) Jasper Ridge; (5) Coyote Ridge (referred to in the listing rule as a portion of the east face of Coyote Creek Valley between Metcalf Road and the Anderson Lake outlet); (6) Calero Reservoir; and (7) San Martin. Subsequent to listing, five additional populations were identified: (1) Tulare Hill; (2) Santa Teresa Hills; (3) Kalana Hills; (4) Morgan Hill; and (5) Bear Ranch. Of these additional populations, four will be considered occupied at the time of listing because they were known from published literature at the time of listing, but they were not specifically mentioned in the listing rule. The fifth population (Bear Ranch) was mentioned in the listing rule as extirpated; however, in 1994 thousands of bay checkerspot butterflies were observed at this location (CNDDB 2006 p. 15). In addition to the locations known at the time of listing, the subspecies was historically known from near Berkeley, California; at Joaquin Miller Park in Alameda County; in San Francisco County from Twin Peaks and Mount Davidson; and in Contra Costa County near Morgan Territory Road (Murphy and Ehrlich 1980, p. 318). However, these populations disappeared as a result of a variety of factors including highway and subdivision construction, drought, overgrazing, and invasion of nonnative plants (Murphy and Ehrlich 1980, p. 319).

Distribution and Population Trends

The population size of the bay checkerspot butterfly is primarily determined by the survival rate of prediapause larvae (Singer 1972, p. 77; Weiss et al. 1988, p. 1486). Prediapause larva experience mortality rates upwards of 95 percent (Murphy 1988, p. 46; Weiss et al. 1988, p. 1487; Cushman et al. 1994, p. 198; Murphy et al. 2004, p. 26). Larval survivorship is dependent upon the timing of host plant senescence, which in turn is dependent on environmental conditions such as rainfall. Rainfall in the San Francisco Bay area is known to vary dramatically (Weiss et al. 1988, p. 1495). The further a particular location is from another, the greater the likelihood each will receive dramatically different rainfall, so plants in areas that experience the same environmental conditions (i.e., those in close proximity and on similar topography) would result in larvae in those locations likely experiencing the same fate.

Since listing in 1987, the distribution and population size of the bay checkerspot butterfly has changed substantially. In San Mateo County, the subspecies' population numbers have declined dramatically. The populations at San Bruno Mountain, Pulgas Ridge, and Jasper Ridge have not been detected in limited surveys, and reintroduction efforts were initiated at Edgewood Park to ensure the San Mateo County populations remain viable. Approximately 1,000 postdiapause larvae were reintroduced to Edgewood Park in February and March 2007. Prior to reintroductions between February and March 2007, the bay checkerspot butterfly had not been observed at Edgewood Park since 2002 (CNDDB 2006). Limited surveys on a small southeastern portion of Pulgas Ridge, dated 1989–1993 and 1994, failed to detect any individual bay checkerspot butterflies (CNDDB 2007). However, these surveys covered only a small portion of the available habitat that was historically occupied.

In Santa Clara County, population trends for the bay checkerspot butterfly are only available for portions of Coyote Ridge (identified as units 8, 10, 11, and 12 in the 2001 designation (66 FR 21450)), Tulare Hill, and Bear Ranch. On Coyote Ridge, south of Metcalf Road (2001 unit 8) bay checkerspot butterfly numbers increased from approximately 20,000 individuals in 1997 to 700,000 individuals in 2004, but fell to approximately 100,000 individuals in 2005 (Weiss 2006, p. 1). On Coyote Ridge, north of Metcalf Road (2001 unit 10), bay checkerspot butterfly numbers increased from approximately 200,000 in 2000 to 400,000 in 2004, but then declined to 45,000 in 2006 (Weiss 2006, p. 1).

Larval estimates from Silver Creek Hills (2001 unit 12), also on Coyote Ridge, increased from 75,000 in 1992 to 128,000 in 1993, but then fell to an estimated 58,000 in 1994 following the removal of grazing from portions of the area (Weiss 1996, p. 93; Weiss 1999, p. 1480), and no larvae or adults were observed in 1998 (Weiss 1999, p. 1480). Annual surveys at Silver Creek Hills since the construction of a residential subdivision and reintroduction of grazing over portions of the area in 2000–2001, showed a slight increase from a low of 11 adults in 2001 to 51 in 2005 (WRA 2006, p. 10). Forty adult bay checkerspot butterflies were observed in the Silver Creek Hills area in 2006, but no larvae were observed (WRA 2006, p. 10).

Post-diapause larvae on Tulare Hill (2001 unit 15) numbered approximately 2,000 individuals in 2002; the population declined significantly in 2003, with only 1 post-diapause larvae observed (CH2M Hill 2004, p. 8–6). Five adult bay checkerspot butterflies were observed on Tulare Hill in 2004 (CH2M Hill 2005, p. 8–2). According to Weiss (2007, p. 1), based on the number of individuals observed on Tulare Hill in 2004, the population size was estimated at approximately 100 individuals. Seven adult bay checkerspot butterflies were observed on Tulare Hill in 2005; however, no post-diapause larvae were observed (CH2M Hill 2006, p. 8–2).

According to California Natural Diversity Database CNDDB (2006) records, thousands of adult bay checkerspot butterflies were observed at Bear Ranch in 1994, 6 adults were observed in 1997, and 1 adult was observed in 1999. The Service is unaware of any other surveys regarding the status of the subspecies within this unit.

Population Dynamics

Studies of the bay checkerspot butterfly's population dynamics characterize it as having a metapopulation dynamic. These studies were influential in the formulation of the metapopulation concept (Ehrlich et al. 1975, pp. 221–228; Harrison 1994, pp. 111–128). A metapopulation is a group of spatially distinct populations that can occasionally exchange dispersing individuals. The populations in a metapopulation are usually thought of as having interdependent extinction and colonization processes, where individual populations may be extirpated from a local area and later be

recolonized from another population that is still extant. The frequency of local extirpation and time until recolonization vary widely from population to population, depending on numerous demographic and environmental factors, such as the size and quality of the habitat, distance from other populations, size of other populations, mobility of the species, and weather. At the time of listing, two metapopulations were known to occur; one in San Mateo County and the other in Santa Clara County.

The current bay checkerspot butterfly range is much reduced, and the butterfly is patchily distributed. Because it occurs as a metapopulation, the exact distribution of the butterfly varies through time: Sites that are unoccupied one year may be occupied the next, and vice versa (Wilcox and Murphy 1985, p. 882; Harrison 1994, p. 114).

Previous Federal Actions

For information on previous Federal actions concerning the bay checkerspot butterfly, refer to the final listing rule published in the **Federal Register** on September 18, 1987 (52 FR 35366), and the designation of critical habitat published in the **Federal Register** on April 30, 2001 (66 FR 21450). On September 30, 1998, we published a recovery plan for Serpentine Soil Species of the San Francisco Bay Area that included the bay checkerspot butterfly. On April 30, 2001, we designated critical habitat on approximately 23,903 acres (9,673 hectares) of land in San Mateo and Santa Clara Counties, California. On March 30, 2005, the Home Builders Association of Northern California filed suit against the Service challenging critical habitat for bay checkerspot butterfly and other species (*Home Builders Association of Northern California* v. *U.S. Fish and Wildlife Service cv–01363–LKK–JFM.*) On February 24, 2006, a settlement agreement was reached that requires the Service to reevaluate the final critical habitat rule in light of the standards for designating critical habitat set forth in *Home Builders Association of Northern California* v. *U.S. Fish and Wildlife Service, 268 F. Supp. 2d 1197* (E.D. Cal 2002) and any other applicable law. As a result, we propose revisions to the rule. The settlement stipulated that any proposed revisions to the bay checkerspot butterfly designation be submitted to the **Federal Register** for publication on or before August 14, 2007.

Critical Habitat

Critical habitat is defined in section 3 of the Act as: (i) The specific areas within the geographical area occupied by a species, at the time it is listed in accordance with the Act, on which are found those physical or biological features (I) essential to the conservation of the species and (II) that may require special management considerations or protection; and (ii) specific areas outside the geographical area occupied by a species at the time it is listed, upon a determination that such areas are essential for the conservation of the species.

Conservation, as defined under section 3 of the Act, means the use of all methods and procedures that are necessary to bring any endangered species or threatened species to the point at which the measures provided under the Act are no longer necessary.

Critical habitat receives protection under section 7 of the Act through the prohibition against Federal agencies carrying out, funding, or authorizing the destruction or adverse modification of critical habitat. Section 7 of the Act requires consultation on Federal actions that may affect critical habitat. The designation of critical habitat does not affect land ownership or establish a refuge, wilderness, reserve, preserve, or other conservation area. Such designation does not allow government or public access to private lands. Section 7 of the Act is a purely protective measure and does not require implementation of restoration, recovery, or enhancement measures.

For inclusion in a critical habitat designation, habitat within the geographical area occupied by the species at time of listing must first have features that are essential to the conservation of the species. Critical habitat designations identify, to the extent known using the best scientific data available, habitat areas that provide essential life cycle needs of the species (areas on which are found the primary constituent elements, as defined at 50 CFR 424.12(b)).

Occupied habitat that contains the features essential to the conservation of the species meets the definition of critical habitat only if its essential features may require special management considerations or protection.

We can designate unoccupied areas as critical habitat. However, when the best available scientific data do not demonstrate that the conservation needs of the species require additional areas, we will not designate critical habitat in areas outside the geographical area occupied by the species.

Section 4 of the Act requires that we designate critical habitat on the basis of the best scientific and commercial data available. Further, our Policy on Information Standards Under the Endangered Species Act (published in the **Federal Register** on July 1, 1994 (59 FR 34271)), the Information Quality Act (section 515 of the Treasury and General Government Appropriations Act for Fiscal Year 2001 (Pub. L. 106–554; H.R. 5658) and our associated Information Quality Guidelines, provide criteria, establish procedures, and provide guidance to ensure that our designation represent the best scientific data available. They require our biologists, to the extent consistent with the Act and with the use of the best scientific data available, to use primary and original sources of information as the basis for recommendations to designate critical habitat. When we are determining which areas to propose as critical habitat, our primary source of information is generally the listing package for the species. Additional information sources may include the recovery plan for the species, articles in peer-reviewed journals, conservation plans developed by States and counties, scientific status surveys and studies, biological assessments, or other unpublished materials and expert opinion or personal knowledge.

Habitat is often dynamic, and species may move from one area to another over time. Furthermore, we recognize that designation of critical habitat may not include all habitat areas that we may eventually determine are necessary for the recovery of the species. For these reasons, a critical habitat designation does not signal that habitat outside the designated area is unimportant or may not be required for recovery.

Areas that support populations of the bay checkerspot butterfly, but are outside the critical habitat designation, will continue to be subject to conservation actions we implement under section 7(a)(1) of the Act. They are also subject to the regulatory protections afforded by the section 7(a)(2) jeopardy standard, as determined on the basis of the best available information at the time of the agency action. Federally funded or permitted projects affecting listed species outside their designated critical habitat areas may still result in jeopardy findings in some cases. Similarly, critical habitat designations made on the basis of the best available information at the time of designation will not control the direction and substance of future recovery plans, habitat conservation

plans (HCPs), or other species conservation planning efforts if new information available to these planning efforts calls for a different outcome.

Methods

As required by section 4(b) of the Act, we used the best scientific data available in determining areas that contain the features essential to the conservation of the bay checkerspot butterfly, and areas unoccupied at the time of listing that are essential to the conservation of the bay checkerspot butterfly or both. This includes information used to prepare the 2001 designation of critical habitat (66 FR 21450), the Recovery Plan for Serpentine Soil Species of the San Francisco Bay Area, the CNDDB, published and unpublished papers, reports, academic theses and surveys, Geographic Information System (GIS) data (such as species occurrence, soil data, land use, topography, and ownership maps), correspondence to the Service from recognized experts, and other information as available.

We have also reviewed available information that pertains to the habitat requirements of this species including:

- Data in reports submitted during section 7 consultations and submitted by biologists holding section 10(a)(1)(A) recovery permits;
- Research published in peer-reviewed articles and presented in academic theses and agency reports;
- Information from species experts; and
- Information gathered during site visits to bay checkerspot butterfly habitat in Santa Clara County.

Primary Constituent Elements

In accordance with section 3(5)(A)(i) of the Act and regulations at 50 CFR 424.12, in determining which areas to propose as revised critical habitat within areas occupied by the species at the time of listing, we consider the primary constituent elements (PCEs) to be those physical and biological features that are essential to the conservation of the species and that may require special management considerations and protection. These include, but are not limited to, space for individual and population growth and for normal behavior; food, water, air, light, minerals, or other nutritional or physiological requirements; cover or shelter; sites for breeding, reproduction, and rearing (or development) of offspring; and habitats that are protected from disturbance or are representative of the historic geographical and ecological distributions of a species.

The specific PCEs required for the bay checkerspot butterfly are derived from the biological needs of the bay checkerspot butterfly as described in the Background sections of this proposal and in the final listing rule published in the **Federal Register** on September 18, 1987 (52 FR 35366).

Space for Individual and Population Growth and for Normal Behavior

The bay checkerspot butterfly occurs in open grassland habitats of the San Francisco Bay in Santa Clara and San Mateo counties. Prior to European settlement, California grasslands are believed to have been comprised of perennial bunchgrasses with both annual and perennial forbs (Jackson 1985, p. 349; Huenneke et al. 1990, p. 478; Corbin and D'Antonio 2004, p. 1273). Today, grassland habitats in California are almost entirely composed of Eurasian annual grasses and forbs (Jackson 1985, p. 349; Huenneke et al. 1990, p. 478; Seabloom et al. 2003, p. 13384; Malmstrom et al. 2005, p. 154) where classical succession does not occur (Huenneke et al. 1990, p. 478; Kie 2005, p. 2). Plant density in nonnative grasslands is extremely high compared to plant density in native grasslands (Malmstrom et al. 2005, p. 154). Dyer and Rice (1997, pp. 484, 490) estimated that pre-settlement densities of some native species was between 1–7 mature individuals per square meter. This is in sharp contrast to densities of several nonnative grasses and forbs; a study by Biswell and Graham (1958, p. 116–117) found densities of some nonnative species, such as *Bromus hordeaceus, Erodium botrys,* and *Festuca megalura*, to be 20,000 to 78,000 mature individuals per square meter. Heady (1958, p. 405) observed somewhat lower densities than Biswell and Graham (1958) of the same species with densities ranging from 4,750 to 28,370 mature individuals per square meter. This suggests that grasslands with nonnative species have large numbers of individuals, but few species (i.e., low diversity). According to Malmstrom et al. (2005, p. 154), California native grasslands, prior to the introduction of Eurasian vegetation, were likely a mix of forbs and grasses, but today these species are out-competed by nonnative grasses.

Serpentine or serpentine-like soils are characterized as shallow, nutrient poor (typically lacking in nitrogen and calcium), containing high magnesium (and other heavy metals), and with low water holding capacity. All currently occupied habitats of the bay checkerspot butterfly occur on serpentine or serpentine-like grasslands that support at least two of the subspecies' larval host plants. Due to poor nutrient availability, as well as other soil characteristics, serpentine and serpentine-like grasslands are, for the most part, inhospitable to the nonnative grasses and forbs that dominate other California grassland ecosystems; these areas are essentially isolated patches where native grassland vegetation is capable of persisting in a landscape, otherwise dominated by nonnative and invasive species. These soils support many rare plant species including populations of the bay checkerspot butterfly's larval host plants *Plantago erecta, Castilleja densiflora,* and *Castilleja exserta*. However, these remnant native grasslands are being invaded and crowded out by nonnative species and are under increased pressure as a result of nitrogen deposition primarily caused by air pollution (Weiss 1999, p. 1477). The enrichment of these soils with nitrogen has allowed nonnative grasses to invade these traditionally nutrient poor habitats, and the result is a thick mat of standing vegetation (thatch). Dense thatch has been reported to inhibit the growth of native forbs (Huenneke et al. 1990, p. 488). Huenneke et al. (1990, p. 489) found that treatment areas that were fenced to prevent grazing resulted in an increase in native perennial and nonnative annual grasses, but in grazed treatments forbs continued to represent an important component. Low and moderate grazing regimes, approximately one cow per 10 acres, have been implemented on portions of Tulare Hill and Coyote Ridge. Because cattle tend to select nonnative grasses over native forbs (Weiss 1999, p. 1484), the result of these grazing regimes has been local increases of the bay checkerspot butterfly's larval host plants.

The bay checkerspot butterfly requires areas with topographic diversity (warm south and west slopes as well as cool north and east slopes), because some slopes become unfavorable depending on annual weather conditions and time of year. Fleishman et al. (2000, p. 34) defined warm and very warm slopes as south- and west-facing slopes with a tilt greater than 11 and 17 degrees, respectively, with cool and very cool slopes defined as those facing north or east with a tilt greater than 11 and 17 degrees, respectively. Harrison et al. (1988, p. 365) defined warm slopes as those facing south, southwest, and southeast with a tilt greater than 7 degrees and cool slopes as those facing north or northeast with a tilt greater than 7 and 12 degrees, respectively. In

hot, dry years, north- and east-facing slopes remain cool and moist longer and larval host plants tend to senesce (reach later maturity; grow old) later than those on other slopes (Weiss et al. 1988, p. 1493; Fleishman et al. 2000, p. 33). The delayed senescence of plants on cool/moist slopes allows larvae to reach their fourth instar (larval development stage/molt) and enter diapause (dormancy) before host plants become inedible. Larvae that are not able to enter diapause prior to host plant senescence starve and die (Singer and Ehrlich 1979, p. 54; White 1987, p. 209; Weiss 1996, p. 6). Because host plants on cool slopes can flower and senesce three or more weeks after those on warmer slopes (Weiss et al. 1988, p. 1493), cool slopes are especially important during extremely dry years (i.e., droughts). However, larval feeding and growth tends to increase on warm slopes because they receive more solar exposure than other slopes; this allows post-diapause larvae to grow quickly and pupate earlier than those on cool slopes. Individuals that pupate earlier have a much greater chance of reproductive success (Weiss et al. 1988, pp. 1493–94).

In addition to weather, slope is important relative to the timing of egg laying. As the adult mating season (referred to as the flight season) progresses, females tend to lay more eggs on cool slopes than on warm slopes (Weiss et al. 1988, p. 1493). The timing of the adult flight season varies with weather, but can generally be described as occurring from late February to early May (Murphy et al. 2004, p. 25). Larvae that hatch late in the flight season have a greater chance of reaching diapause on cooler slopes than those laid at the same time on warm slopes, because host plants mature later on cool slopes. The pattern of larval survivorship across different slopes changes from one year to the next as well as within years; therefore, it becomes important that a variety of slopes and aspects are present to support the butterfly and its host plants.

Food

The primary larval host plant for the bay checkerspot butterfly is a small, annual, native plantain (*Plantago erecta*). The bay checkerspot butterfly also requires the presence of a secondary host plant, either purple owl's-clover (*Castilleja densiflora*) or exserted paintbrush (*Castilleja exserta*) (Singer 1972, p. 76; Murphy and Ehrlick 1980, p. 316; Fleishman et al. 1997, p. 32; Weiss 1999, p. 1478; Hellman 2002, pp. 926, 931). The need for a secondary host plant is related to the timing of senescence of the primary host plant. In many years, the primary host plant dries up before larvae have reached their fourth instar and entered diapause. Because purple owl's-clover and exserted paintbrush tend to senesce later than the plantain, larvae that switch to these plants may extend their feeding season long enough to reach their fourth instar.

Adult bay checkerspot butterflies utilize nectar from a variety of plants associated with serpentine grasslands. Commonly used nectar plants include desert parsley (*Lomatium spp.*), California goldfields (*Lasthenia californica*), tidy-tips (*Layia platyglossa*), sea muilla (*Muilla maritima*), scytheleaf onion (*Allium falcifolium*), false babystars (*Linanthus androsaceus*), and intermediate fiddleneck (*Amsinckia intermedia*). Egg production (both size of individual eggs and number of eggs) significantly increases with the intake of nutrients (Murphy et al. 1983, p. 261; Boggs 1997a, pp. 181, 184). Murphy et al. (1983, p. 261) observed increased longevity and reduced weight loss in adult bay checkerspot butterflies that were fed sugar. Murphy et al. (1983, p. 261) also observed that amino acid intake produced heavier eggs and that larvae from these eggs had an increased likelihood of survival. A study by O'Brien et al. (2004, p. 286), which examined egg production and adult diet in three species of butterflies in the family Nymphalidae, found the percent of carbon in eggs, derived from adult diets, increased with time (up to 80 percent in one species). Currently there is no information regarding nectar usage on adult male longevity or reproduction.

All of the host plants have ranges greater than that of the bay checkerspot butterfly and the larval plants may be found in areas that do not meet the life-history requirements of the bay checkerspot butterfly. For example, *Castilleja densiflora* historically occurred throughout California, *Plantago erecta* occurred throughout California and Oregon, and *Castilleja exserta* occurred in California, Arizona, New Mexico, Hawaii, and Massachusetts (USDA 2007). In addition, the range of many of the nectar sources is also much greater than the geographic range of the bay checkerspot butterfly.

Water

Launer et al. (1993, p. 45) observed large numbers (hundreds) of checkerspots, predominately females, ''puddling'' at a creek in 1990. Puddling is a behavior observed in some butterfly species in which adults take up moisture from saturated soils. Launer et al. (1993, pp. 48–50) provided several alternative hypotheses for explaining the observed puddling behavior, since the bay checkerspot butterfly was not traditionally believed to be a puddling species. One hypothesis was that because the observation was made during an extremely dry period (third year of a drought), the creek was providing resources that were otherwise unavailable (or only in low quantities), and that moist areas may provide an increased chance of survival during drought periods (Launer et al. 1993, p. 49). Murphy et al. (1983, p. 261) observed that under laboratory conditions female bay checkerspot butterflies lived longer when provided water. Checkerspots are not generally considered puddling butterflies, and some researchers consider it very unusual for members of the genus *Euphydryas* to exhibit puddling behavior (Emmel 2007, p. 1). However, the observation of large numbers of bay checkerspot butterflies taking water from the banks of a creek provides evidence for a need for aquatic features (i.e., water).

Soils

The bay checkerspot butterfly inhabits areas with soils derived from serpentinite ultramafic rock (Montara, Climara, Henneke, Hentine, and Obispo soil series) or similar non-serpentine soils (such as Inks, Candlestick, Los Gatos, Fagan, and Barnabe soil series). Serpentine soils are characterized as having low amounts of nutrients (such as nitrogen and calcium); high concentrations of magnesium; low water-holding capacity; and patches of heavy metals. These characteristics create a refuge for many rare native plants, because other plant species are not capable of surviving in these soils (nitrogen is often a limiting factor in plant growth). The nonserpentine soils mentioned above have characteristics that allow them to support grassland communities similar to those on serpentine soils, such as low water-holding capacity, slight to moderate acidity (pH 5.8), and varied topography (slopes ranging from 5 to 75 percent). Together, these soils provide the last remaining habitat within the geographic range of the bay checkerspot butterfly where the larval host plants are capable of persisting and not be outcompeted or crowded out by introduced annuals. Some researchers have hypothesized that the bay checkerspot butterfly once occurred widely in nonserpentine grasslands throughout the San Francisco Bay area prior to the invasion of nonnative invasive grasses and forbs

(Murphy and Weiss 1988, p. 197), but have subsequently been relegated to these fragmented habitats due to plant competition.

Cover

Larval bay checkerspot butterflies enter diapause in order to survive the summer dry period, once their host plants senesce. Diapause is an obligatory dormancy period that begins once larvae reach their fourth instar, which takes approximately three weeks, but may vary considerably depending on abiotic factors (non-living components of the biosphere) (Kuussaari, et al. 2004, p. 140). Evidence suggests that larvae may be capable of entering diapause more than once (White and Levin 1981, p. 355; Harrison 1989, p. 1242; Kuussaari et al. 2004, pp. 139–140; Mattoni et al. 1997, p. 106). Diapause continues until the summer dry period is broken by the onset of the rainy season, generally some time in November-January (Weiss 1996, p. 6). The larvae pass through diapause in holes and cracks in the soil and under rocks (White 1987, p. 209; Weiss 1996, p. 7) that provide protection from weather, predation, and parasitism. White (1986, p. 58) observed that pupal mortality rates, as well as cause of mortality (i.e., predation, parasitism, crushing, or disease), varied significantly depending on location, with significant differences in mortality between microhabitat types. For example, crushing was most likely in areas of bare ground, whereas pupae in areas with dense vegetation had a higher rate of mortality due to mold and viruses.

Primary Constituent Elements for the Bay Checkerspot Butterfly

Within the geographical area we know to be occupied by the bay checkerspot butterfly, we must identify the PCEs that may require special management considerations or protections.

Based on the above needs and our current knowledge of the life history, biology, and ecology of the species, we have determined that bay checkerspot butterfly PCEs are:

(1) The presence of annual or perennial grasslands with little to no overstory that provide north/south and east/west slopes with a tilt of more than 7 degrees for larval host plant survival during periods of atypical weather (e.g., drought). Common grassland species include wild oats (*Avena fatua*), soft chess (*Bromus hordeaceus*), California oatgrass (*Danthonia californica*), purple needlegrass (*Nassella pulchra*), and Idaho fescue (*Festuca idahoensis*); less abundant in these grasslands are annual and perennial forbs such as filaree (*Erodium botrys*), true clovers (*Trifolium* sp.), dwarf plantain (*Plantago erecta*), and turkey mullein (*Croton setigerus*).

(2) The presence of the primary larval host plant, dwarf plantain (*Plantago erecta*) and at least one of the secondary host plants, purple owl's-clover (*Castilleja densiflora*) or exserted paintbrush (*Castilleja exserta*), are required for reproduction, feeding, and larval development.

(3) The presence of adult nectar sources for feeding. Common nectar sources include desertparsley (*Lomatium* spp.), California goldfields (*Lasthenia californica*), tidy-tips (*Layia platyglossa*), sea muilla (*Muilla maritima*), scytheleaf onion (*Allium falcifolium*), false babystars (*Linanthus androsaceus*), and intermediate fiddleneck (*Amsinckia intermedia*).

(4) Aquatic features such as wetlands, springs, seeps, streams, lakes, and ponds and their associated banks, that provide moisture during periods of spring drought; these features can be ephemeral, seasonal, or permanent.

(5) Soils derived from serpentinite ultramafic rock (Montara, Climara, Henneke, Hentine, and Obispo soil series) or similar soils (Inks, Candlestick, Los Gatos, Fagan, and Barnabe soil series) that provide areas with fewer aggressive, nonnative plant species for larval host plant and adult nectar plant survival and reproduction.

(6) The presence of stable holes and cracks in the soil, and surface rock outcrops that provide shelter for the larval stage of the bay checkerspot butterfly during summer diapause.

We have designed this proposed revision to the critical habitat designation for the conservation of PCEs necessary to support the life-history functions that were the basis for our proposal and the areas containing those PCEs. Because not all life-history functions require all the PCEs, not all proposed critical habitat will contain all the PCEs.

We propose units for designation based on sufficient PCEs being present to support one or more of the species' life-history functions. Some units contain all PCEs and support multiple life processes, while some units contain only a portion of the PCEs necessary to support the species' particular use of that habitat.

Special Management Considerations or Protections

When designating critical habitat, we assess whether the areas determined to be occupied at the time of listing and contain the primary constituent elements may require special management considerations or protections. Threats to those features that define the PCEs for the bay checkerspot butterfly include habitat loss and fragmentation, invasion of exotic/invasive plants, nitrogen deposition (including NO_X and ammonia), pesticide application (including drift), illegal collecting, fire, overgrazing, and gopher control.

Critical habitat units 1, 2, and 5–10 may require special management due to threats posed by habitat loss and fragmentation resulting from urban and suburban growth. Development pressure in Santa Clara County is likely to increase in the foreseeable future. The City of San Jose has developed a General Plan to guide development in the area into the year 2020 and is not part of the proposed Santa Clara County HCP. Portions of the general plan share boundaries with critical habitat units, including Units 5, 6, 7, and 9. Some currently or proposed projects include the Coyote Valley Specific Plan, which includes residential and industrial developments, the Coyote Valley Research Park, numerous projects currently proposed for inclusion under the Santa Clara Habitat Conservation Plan, as well as numerous single family residential units and road grading projects. In 1997, the California Court of Appeals 6th District found that the City of San Jose's zoning did not have to be consistent with the City's General Plan (*Juarez et al.* v. *City of San Jose et al.* (6th District, Case No. CV736436 H014755)); this may result in areas not currently within the urban growth boundary still being proposed for development, including those areas that are environmentally sensitive such as critical habitat units. In addition, portions of Unit 10 are within the planning boundaries of the City of Morgan Hill's General Plan.

All proposed revised critical habitat units would likely require special management due to the threats posed by the invasion of nonnative vegetation that result from air pollution (primarily nitrogen deposition) (Weiss 1999, p. 1477). Nitrogen deposition enriches serpentine and serpentinelike soils that are usually nutrient poor. Increased nitrogen (typically a limiting factor in plant growth) in these areas has resulted in the accumulation of a thick carpet of vegetative material (thatch) each year. Dense thatch has been reported to inhibit the growth of native forbs (Huenneke et al. 1990, p. 488). The increased density of nonnative vegetation would negatively affect the bay checkerspot butterfly's host plant through competition and crowding (Weiss 1999, p. 1481).

All proposed revised critical habitat units may require special management due to the threats posed by pesticide use. Use of pesticides (i.e., insecticides, and herbicides) in or adjacent to critical habitat may affect populations of butterflies within these units. Populations adjacent to areas where there is intensive use of pesticides may be at risk as a result of drift and runoff. In at least one instance, larvae appeared to have survived a direct application of malathion by the California Department of Food and Agriculture; however, the application was conducted in the fall of 1981 when larvae were still in diapause.

All proposed revised critical habitat units may require special management due to the threat posed by fire. No bay checkerspot butterflies were seen on San Bruno Mountain after a wildfire swept across portions of the mountain in 1986. However, only about 50 adult butterflies were observed on the mountain in 1984 (CNDDB 2006), so their subsequent disappearance may not have been solely related to the 1986 fire. The use of fire as a management regime in serpentine grasslands has not been well studied. Studies that have been conducted are primarily monitoring opportunities made possible after wildfires.

Use of prescribed burns may be an effective management tool depending on timing, intensity, and size of the area burned. Prescribed burns are widely used as a land management tool to counter the invasion of nonnative and invasive plant species and to stimulate growth and reproduction of those species adapted to disturbance. An experimental prescribed burn was conducted over a small portion of Coyote Ridge in 2006, but the results are not yet known.

All proposed revised critical habitat units may require special management due to the threat posed by over or under grazing. Although grazing is frequently used as a management tool to reduce standing biomass of nonnative vegetation, overgrazing can be a potential threat if grazing densities are not appropriately managed. Huenneke et al. (1990, p. 489) and Weiss (1999, p. 1480) found that areas that were fenced to prevent grazing or sites where grazing had been removed, resulted in an increase in annual grasses, which crowd out forbs including those that are essential to the bay checkerspot butterfly. Forbs continued to be an important component in areas that included limited grazing. Therefore, we consider a limited amount of grazing to be beneficial to bay checkerspot habitat.

All proposed revised critical habitat units may require special management due to the threats posed by gopher control. Larval host plants have been observed to stay green and edible longer when located on or near soils recently tilled by gophers (*Thomomys bottae*) (Singer 1972, p. 75; Murphy et al. 2004, p. 26). Huenneke et al. (1990, p. 490) hypothesized that soil disturbance by gophers may limit the performance of grasses similar to results caused by grazing, with grazers reducing the standing grass biomass in a system, which allowed the persistence of small forbs. Larval host plants that stay green longer into the dry season may allow prediapause larva to reach the fourth instar.

Criteria Used To Identify Critical Habitat

All proposed revised critical habitat units are within areas that we have determined were occupied at the time of listing or are currently occupied, and that contain sufficient PCEs to support life history functions essential for the conservation of the subspecies. Lands were proposed for designation based on sufficient PCEs being present to support the life processes. Some lands contain only a portion of the PCEs necessary to support the particular use of that habitat.

We have defined occupied critical habitat as: (1) Those grasslands on serpentine or serpentine-like soils containing the PCEs that were occupied by the bay checkerspot butterfly at the time of listing in 1987 or (2) those grasslands on serpentine or serpentine-like soils containing the PCEs that have been occupied since the time of listing. Units did not have to contain all PCEs. We used information compiled for the proposed and final listing rules, reports prepared by San Mateo County Parks, Santa Clara County Parks, the CNDDB, researchers, consultants, and published and unpublished literature to identify the specific locations occupied by the bay checkerspot butterfly at the time of listing and currently occupied.

The currently occupied habitat for the bay checkerspot butterfly is highly fragmented and isolated; the majority of all extant occurrences are within an approximate 9 mile (mi) (14.5 kilometer (km)) radius in Santa Clara County, California. The population estimates in San Mateo County are extremely small and those in Santa Clara County have declined significantly in recent years. As a result of population declines and fragmented habitats, all areas currently known to support the bay checkerspot butterfly are being proposed for designation.

Several areas occupied by the bay checkerspot butterfly at the time of listing are not currently occupied. Some of these areas have been surveyed since listing and no bay checkerspot butterflies were observed; however, not all of the units have been recently surveyed and, due to the metapopulation dynamics of the subspecies, it is possible that the subspecies has recolonized some of these areas. The metapopulation dynamics of the subspecies has shown that population fluctuations occur and extirpation and recolonization is a normal occurrence for the bay checkerspot butterfly (Ehrlich et al. 1975, pp. 221–228; 1980; Harrison 1994, pp. 111–128). The units that have been surveyed since the time of listing without observations of the subspecies include San Bruno Mountain, Pulgas Ridge, and Jasper Ridge Biological Preserve in San Mateo County, California. These areas are proposed for designation as critical habitat because they were all occupied at the time of listing and designation of these units will reduce the likelihood of extinction by providing source/sink (larger patches of high-quality habitat/small patches of marginal habitat/) areas and ''stepping stone'' (often smaller, unconnected areas that bridge the distance between larger blocks of suitable habitat) habitats for the subspecies. Since the bay checkerspot butterfly is susceptible to extreme weather events these additional units in San Mateo County will also reduce the risk of extinction from stochastic natural events, extreme weather conditions, and help to ensure survival of the subspecies by providing potential dispersal habitat for individuals that were reintroduced to Edgewood Park early in 2007.

The distribution of proposed critical habitat areas (occupied and currently unoccupied) was selected to help reduce the level of habitat fragmentation within the geographic range of the bay checkerspot butterfly by providing dispersal and recolonization opportunities for the subspecies. The butterfly is considered relatively sedentary (Ehrlich 1965, p. 333; Harrison 1989, p. 50–51; Singer and Hanski 2004, p. 187) and reduced fragmentation should facilitate movements between habitat patches. McKechnie et al. (1975, p. 561) observed that out of several years of mark recapture studies only 1.7 percent of males and 4.8 percent of females moved a distance of approximately 1,600 feet (ft.) (500 meter (m)). These figures are consistent with observations made by Weiss (1996, p. 93) who reported that adult movement declined with increasing distance with only about 5

percent moving between 656 to 984 ft (200 to 300 m).

Although the butterfly is considered sedentary, long-distance movements have been documented. The longest documented movements observed by Harrison (1989, p. 1239) were 3.5 mi (5.6 km) for one male and 2 mi (3.2 km) for one female. Murphy (Service 2001, p. 21451) reported movement of bay checkerspot butterflies of 4.7 mi (7.6 km). Harrison et al. (1988, p. 371) hypothesized that habitats greater than 4.3 to 5.0 mi (7 to 8 km) from a source population (Coyote Ridge in the study) were unlikely to ever sustain populations of the bay checkerspot butterfly. This hypothesis was based on the presence or absence of adult bay checkerspot butterflies in Santa Clara County in apparently suitable habitat and their relative distance from Coyote Ridge. The study was not designed to predict the bay checkerspot butterfly's upper limit of dispersal. Harrison (1989, p. 371) hypothesized that the rate of colonization, relative to the rate of extinction, was too low to maintain populations of the bay checkerspot butterfly on distant habitat patches (distant from a source patch). Given the subspecies' historical distribution, its metapopulation dynamics, and its sedentary tendencies, reducing habitat fragmentation, by designating occupied and currently unoccupied habitat that provide quality stepping stone habitat, will increase the likelihood of recolonization of more distant patches of suitable habitat.

We have determined that, due to the limited availability of habitat for the subspecies, its limited distribution, and its generally low dispersal tendencies, the long-term conservation of the bay checkerspot butterfly is dependent upon the protection of habitat that was occupied at the time of listing as well as habitat that is currently occupied. The presence of all six PCEs was not a requirement to designating a unit as critical habitat; however, all twelve units currently support all six PCEs.

Mapping

Geospatial datasets were used within ArcGIS/ArcMap 9.2 (Environmental Systems Research Institute, Redlands, California) and analyzed to define the areas that best contain the features that are essential to the conservation of the bay checkerspot butterfly. To delineate the proposed units of occupied critical habitat, we plotted all occurrence records of bay checkerspot butterfly known at the time of listing or currently known on maps as polygons. We then examined whether these areas supported the PCEs.

When determining the proposed revisions to critical habitat boundaries within this proposed rule, we made every effort to avoid including developed areas such as buildings, paved areas, and other structures that lack PCEs for the bay checkerspot butterfly. The scale of the maps we prepared under the parameters for publication within the Code of Federal Regulations may not reflect the exclusion of such developed areas. Any such structures and the land under them inadvertently left inside critical habitat boundaries shown on the maps of this proposed revision to critical habitat have been excluded by text in this proposed rule and are not proposed for designation as critical habitat. Therefore, Federal actions limited to these areas would not trigger section 7 consultation, unless they may affect the subspecies or primary constituent elements in adjacent critical habitat.

We are proposing to revise the critical habitat designation on lands that we have determined were occupied at the time of listing or are currently occupied and contain sufficient primary constituent elements to support life-history functions essential for the conservation of the subspecies.

The units being proposed for revised designation are based on sufficient PCEs being present to support bay checkerspot butterfly life processes. Some units contain all PCEs and support multiple life processes. Some units contain only a portion of the PCEs necessary to support the bay checkerspot butterfly particular use of that habitat. Where a subset of the PCEs is present (such as presence of larval host plants, adult nectar plants, and grasslands with varied topography), it has been noted that only PCEs present at designation would be protected.

Section 10(a)(1)(B) of the Act authorizes us to issue permits for the take of listed animal species incidental to otherwise lawful activities. An incidental take permit application must be supported by a habitat conservation plan (HCP) that identifies conservation measures that the permittee agrees to implement to minimize and mitigate the impacts on the species by the requested incidental take. We often exclude non-Federal public lands and private lands that are covered by an existing operative HCP and executed implementation agreement (IA) under section 10(a)(1)(B) of the Act from designated critical habitat because the benefits of exclusion outweigh the benefits of inclusion as discussed in section 4(b)(2) of the Act. To date, Pacific Gas and Electric's Metcalf Evendale/Monta Vista Line is the only HCP that has been completed that includes the bay checkerspot butterfly as a covered species. The HCP was issued in 1998 and was in effect for a period of 3 years, and covered approximately 4 ac (1.6 ha). Because the HCP has expired, we are not proposing to exclude lands once covered under this HCP. The San Bruno Mountain HCP (SBMHCP) Amendment 5 would add the Callippe silverspot butterfly (*Speyeria callippe callippe*) and the bay checkerspot butterfly to the existing HCP. The Callippe silverspot butterfly shares some habitat requirements similar to the bay checkerspot butterfly, specifically the use of open grasslands. We are proposing to exclude Unit 1 from critical habitat based on the development of amendment 5 of the SBMHCP (See *Application of Section 4(b)(2) of the Act*). Stanford University is in the process of developing an HCP for lands owned by Stanford University, which includes the Jasper Ridge Biological Preserve (Unit 4); however as currently proposed, this HCP would not include the bay checkerspot butterfly or any other butterfly species, so this HCP is not being proposed for exclusion. Santa Clara County is currently in the early stages of developing a regional HCP that would encompass the majority of Santa Clara County, including all proposed critical habitat units in the county (Units 5 through 12); this HCP is still in the early stages of development, but as proposed would include the bay checkerspot butterfly. However, the Santa Clara County HCP is not expected to be finalized for several years. We are seeking comments regarding areas that have management plans or HCPs that may potentially be excluded from the critical habitat designation (see Public Comments Solicited section above).

Summary of Changes From Previously Designated Critical Habitat

The areas identified in this proposed rule constitute a proposed revision from the areas we designated as critical habitat for bay checkerspot butterfly on April 30, 2001 (66 FR 21450). The primary differences include the following:

(1) The 2001 critical habitat rule (66 FR 21450) consisted of 15 units comprising a total of 23,903 ac (9,673 ha). This proposed revision includes 12 units comprising a total of 19,746 ac (7,990 ha). The majority of the proposed units correspond to those in the 2001 designation. However, we have refined the units to eliminate areas that are unlikely to support the PCEs such as areas that are forested or have since been developed. The unit formerly designated as Communications Hill (2001 unit 6) is not included in this

proposed rule because that unit has since been developed to a large degree and the remaining habitat has been degraded by the invasion of nonnative and invasive grasses and is unlikely to support sufficient PCEs to meet one or more of the life-history requirements of the subspecies. In addition, the Pulgas Ridge unit (proposed unit 2) is new in this proposed designation and is included because it represents an area that was historically known to support the subspecies, is currently undeveloped, is expected to serve as a ''stepping stone'' between the two southern units in San Mateo County (proposed units 4 and 5) and the San Bruno Mountain unit (proposed Unit 1), and can provide additional habitat to support a core population in San Mateo County. Currently the distance between proposed Unit 1 and proposed Unit 2 is greater than the published dispersal distance of the bay checkerspot butterfly; however, a number of small and fragmented patches of intervening grasslands occur along the Interstate 280 corridor between proposed Unit 1 and 2 that would be expected to serve as additional stepping stones to potentially allow for movement between these two units. The numerous small patches of grassland habitat between units are not proposed to be designated as critical habitat because the Service has no information regarding the presence of sufficient PCEs within these areas.

(2) We propose to revise the PCEs and exclude ''pollinators of the bay checkerspot butterfly's food and nectar plants'' because the specific pollinators of each host and nectar plant are not known and the presence of the plants themselves implies their successful reproduction. We clarify ''topography with varied slopes and aspects'' by defining those slope aspects that were important as well as defining warm versus cool slopes. We expand the previous PCE regarding ''wetlands that provide moisture'' to reflect the range of water sources that may be used by the subspecies, such as the banks of streams and lakes. To provide for greater specificity we remove ''space for dispersal between habitable areas'' and include ''annual and perennial grasslands'' along with a description of that habitat type and plant species commonly found in them. We replace ''stands of'' the larval host plants with ''presence of'' because the density of host plants needed to support the subspecies has not been widely researched and does not appear in the literature, and thus is difficult to quantify at this time. Finally, to provide for greater specificity, we expand the previous PCE regarding soils to include a list of soils that are associated with serpentine or serpentine-like habitats.

(3) We updated areas that are currently known to support populations of the bay checkerspot butterfly, as well as areas where the subspecies has since become extirpated. The number of known occurrences has continued to decline since the 2001 designation of critical habitat.

Proposed Revisions to the Critical Habitat Designation

We are proposing 12 units as critical habitat for the bay checkerspot butterfly. These units, which generally correspond to those units in the 2001 designation, if finalized, would entirely replace the current critical habitat designation for the bay checkerspot butterfly in 50 CFR 17.95(i). The critical habitat areas we describe below constitute our current best assessment of areas that meet the definition of critical habitat for the bay checkerspot butterfly. The 12 areas designated as critical habitat are: (1) San Bruno Mountain, (2) Pulgas Ridge, (3) Edgewood Park, and (4) Jasper Ridge in San Mateo County; and (5) Coyote Ridge (A and B), (6) Tulare Hill, (7) Santa Teresa Hills, (8) Calero Reservoir, (9) Kalana Hills (A and B), (10) Morgan Hill, (11) Bear Ranch, and (12) San Martin in Santa Clara County. The approximate area encompassed within each proposed critical habitat unit is shown in Table 2. Of the 19,746 ac (7,990 ha) being proposed as revised critical habitat, we are proposing to exclude approximately 775 ac (314 ha) from the final critical habitat designation under section 4(b)(2) of the Act. See Exclusions Under Section 4(b)(2) of the Act section for a detailed discussion.

The approximate area (ac, ha) encompassed within each proposed revised critical habitat unit, land ownership, areas proposed for exclusion from the final critical habitat designation, and occupancy of units are shown in Tables 1, 2, and 3.

TABLE 1.—OCCUPANCY OF PROPOSED REVISED CRITICAL HABITAT UNITS FOR THE BAY CHECKERSPOT BUTTERFLY

Unit	Occupied at time of listing	Currently occupied	Acres (hectares)
Unit 1: San Bruno Mt	Yes	No	775 (314)
Unit 2: Pulgas Ridge	Yes	No	179 (72)
Unit 3: Edgewood Park	Yes	Yes	409 (166)
Unit 4: Jasper Ridge	Yes	No	329 (133)
Unit 5: Coyote Ridge	Yes	Yes	10,148 (4,107)
Unit 6: Tulare Hill	Yes	Yes	747 (302)
Unit 7: Santa Teresa Hills	Yes	Yes	3,987 (1,613)
Unit 8: Calero Reservoir	Yes	Yes	1,543 (624)
Unit 9: Kalana Hills:			
Subunit 9A	Yes	Yes	170 (69)
Subunit 9B	Yes	Yes	56 (23)
Unit 10: Morgan Hill	Yes	Yes	507 (205)
Unit 11: Bear Ranch	No	Yes	393 (159)
Unit 12: San Martin	Yes	Yes	502 (203)
Total			19,746 (7,990)

TABLE 2.—CRITICAL HABITAT UNITS PROPOSED FOR THE BAY CHECKERSPOT BUTTERFLY

[Area estimates reflect all land within critical habitat unit boundaries (in acres and hectares)]

Unit	Federal	State/local	Private	Total
Unit 1: San Bruno Mt	0	577 (234)	198 (80)	775 (314)
Unit 2: Pulgas Ridge	0	179 (72)	0	179 (72)
Unit 3: Edgewood Park	0	303 (123)	106 (43)	409 (166)
Unit 4: Jasper Ridge	0	0	329 (133)	329 (133)
Unit 5: Coyote Ridge	0	110 (45)	10,148 (4,107)	10,148 (4,107)
Unit 6: Tulare Hill	0	102 (41)	645 (261)	747 (302)
Unit 7: Santa Teresa Hills	0	1,100 (445)	2,888 (1,169)	3,987 (1,613)
Unit 8: Calero Reservoir	0	1,543 (624)	0	1,543 (624)
Unit 9: Kalana Hills:				
Subunit 9A	0	0	170 (69)	170 (69)
Subunit 9B	0	0	56 (23)	56 (23)
Unit 10: Morgan Hill	0	0	507 (205)	507 (205)
Unit 11: Bear Ranch	0	393 (159)	0	393 (159)
Unit 12: San Martin	0	0	502 (203)	502 (203)
Total	0	4,308 (1,743)	15,438 (6,248)	19,746 (7,990)

We present brief descriptions of all units, and reasons why they meet the definition of critical habitat for the bay checkerspot butterfly, below.

Unit 1: San Bruno Mountain

Unit 1 consists of 775 ac (314 ha) in San Mateo County. The unit is primarily within San Bruno Mountain State and County Park, and is inside the boundaries of the San Bruno Mountain Area Habitat Conservation Plan. This unit was occupied at the time of listing and contains all the features essential for the conservation of the subspecies; however, the bay checkerspot butterfly has not been observed in this unit since a wildfire in 1986 and is currently unoccupied. Unit 1 represents the most northerly part of the subspecies' range on the San Francisco peninsula. Unit 1 is necessary as a supporting element of the San Mateo metapopulation because it represents the largest area of contiguous native grassland habitat that can support the bay checkerspot butterfly's host and nectar plants within San Mateo County. This unit currently supports populations of the federally endangered Callippe silverspot butterfly (*Speyeria callippe callippe*), endangered San Bruno elfin butterfly (*Callophrys mossii bayensis*), and endangered Mission blue butterfly (*Icaricia icarioides missionensis*), which all share similar habitat requirements as the bay checkerspot butterfly (including native grasslands). The majority of this unit, approximately 577 ac (233 ha), is within the boundaries of the San Bruno Mountain State and County Park, while the rest of the unit is privately owned (198 ac (80 ha)). As stated above, the distance between Unit 1 and the most proximate Unit 2 is greater than the published dispersal distance of the bay checkerspot butterfly; however, numerous small patches of intervening grasslands would be expected to serve as additional stepping stones to potentially allow for movement between these two units. These patches of grassland habitat are not proposed to be designated as critical habitat because the Service has no information regarding the presence of sufficient PCEs within these areas.

Unit 2: Pulgas Ridge

Unit 2 consists of 179 ac (72 ha) in San Mateo County. The unit is located north of the intersection of Interstate 280 and Highway 92, east of Crystal Springs Reservoir. This unit was occupied at the time of listing and contains all the features essential for the conservation of the subspecies. Since listing, bay checkerspot butterflies in this unit have been extirpated, and the unit is currently unoccupied. However, the bay checkerspot butterfly formerly inhabited this unit, and the unit still contains all the PCEs. The land within this unit is owned by San Francisco Public Utilities Commission (SFPUC) and is part of the Peninsula watershed and not subject to development. This unit provides habitat for the subspecies, especially in years with particularly favorable weather conditions that support expanding populations of the bay checkerspot butterflies; represents a stepping stone location to nearby units; and secures the metapopulation dynamics of the subspecies by providing adjacent or dispersal habitat for the subspecies. According to the Peninsula watershed management plan (SFPUC 2002, p. 2–11), portions of the watershed currently support populations of the endangered San Bruno elfin butterfly and the endangered Mission blue butterfly that share similar habitat requirements as the bay checkerspot butterfly (including native grasslands). In addition, according to the environmental impact statement for the Peninsula watershed management plan (SFPD 2001, p. XLB–7), portions of the watershed have a high probability of supporting the bay checkerspot butterfly and is designated as being serpentine grassland habitat.

Unit 3: Edgewood Park

Unit 3 consists of 409 ac (166 ha) in San Mateo County. This unit is comprised primarily of the Edgewood Park and Natural Preserve, a San Mateo County park located east of the junction of Edgewood Road and Interstate 280. A portion of the unit, approximately 66 ac (27 ha), is owned by the San Francisco Public Utilities Commission and is part of the Peninsula watershed. This unit was occupied at the time of listing, is currently occupied, and contains all the features essential to the conservation of the subspecies. Until recently, this unit supported the main population of bay checkerspot butterflies within the San Mateo metapopulation. However, the subspecies was last observed here in 2002, after a steady decline beginning in the late 1990s. Larval bay checkerspot butterflies were reintroduced to this unit in early 2007. The population of bay checkerspot butterflies within this unit has been described as the only core population in San Mateo County, and without bay checkerspot butterflies in this unit, the subspecies in San Mateo is unlikely to persist, which would leave only the one metapopulation in Santa Clara County and would constitute a significant range reduction for the subspecies.

Unit 4: Jasper Ridge

Unit 4 consists of 329 ac (133 ha) in San Mateo County. The unit is entirely

contained within Stanford University's Jasper Ridge Biological Preserve. The unit is 4 mi (7 km) southeast of Unit 3 and 23 mi (37 km) west-northwest of Unit 5, and represents the closest connection to the Santa Clara County metapopulation. This unit was occupied at the time of listing and contains all the features essential to the conservation of the subspecies. Decades of data and dozens of published scientific papers about the Jasper Ridge population of the bay checkerspot butterfly exist. The population was almost extirpated by prolonged drought in the late 1970s and again in the late 1980s. The unit was occupied at the time of listing; however the last known observation of the bay checkerspot butterfly in this unit was in 1997; the unit is currently unoccupied. The unit is managed as a biological preserve by Stanford University and suitable habitat, containing all the PCEs, continues to be present. Unit 4 is the closest unit in San Mateo County to populations of the bay checkerspot butterfly in Santa Clara County. While currently not known to be occupied, metapopulation dynamics may allow for natural recolonization to occur by bay checkerspot butterflies from Santa Clara County through the stepping stones of grassland habitat. There are numerous small patches of grassland habitat (potential stepping stones) between the units in San Mateo and Santa Clara Counties, although Unit 4 is the closest known area with sufficient PCEs. The numerous small patches of grassland habitat between units are not proposed to be designated as critical habitat because the Service has no information regarding the presence of sufficient PCEs within these areas. Unit 4 is also the closest suitable habitat with sufficient PCEs to the recently reintroduced Edgewood Park population and is necessary to support and maintain the Edgewood Park population (Unit 3), which in turn support the metapopulation dynamics of the bay checkerspot butterfly in San Mateo County by providing the necessary dispersal habitat and connectivity between the San Mateo and Santa Clara County populations.

Unit 5: Coyote Ridge

This unit consists of 10,149 ac (4,107 ha) in Santa Clara County. The unit encompasses Units 8, 10, 11, and 12 as identified in the 2001 designation. The unit is comprised almost entirely of the ridgeline known as Coyote Ridge, the majority of which is in private ownership, although approximately 110 ac (45 ha) are owned by Santa Clara County Parks for off-road vehicle recreation. To the north the unit is bordered by Yerba Buena Road near its intersection with U.S. Highway 101 and Metcalf Road divides the unit almost in half. The unit was occupied at the time of listing and contains all the features essential to the conservation of the subspecies represents the only remaining core population of the bay checkerspot butterfly. Other units in Santa Clara County depend on this core population as a source for recolonization. The unit represents the largest, most contiguous, and highest quality habitat containing the largest population of bay checkerspot butterflies.

Researchers historically referred to the bay checkerspot butterflies within this unit as four populations: Kirby, Metcalf, San Felipe, and Silver Creek Hills and our previous designation identified them as separate units. The Kirby population is the southernmost of the four and has consistently had the largest numbers of bay checkerspot butterflies. The Kirby area had an estimated 700,000 individuals in 2004, but declined to 100,000 individuals in 2005 (Weiss 2006, p. 1). Although still under private ownership, approximately 291 ac (118 ha) of the Kirby area is under some form of protection or management for special status species, including the bay checkerspot butterfly. In addition, a 250-ac (101-ha) butterfly preserve is being managed by Waste Management Incorporated (WMI) as compensation for adverse effects to the bay checkerspot butterfly in association with its landfill. However, the protection afforded the butterfly preserve is not permanent, and the land the preserve is on is not owned by WMI. The Metcalf population supported an estimated 400,000 individuals in 2004, but has suffered a significant decline down to an estimated 45,000 individuals in 2006 (Weiss 2006, p. 1). The Metcalf population is within the limits of the City of San Jose and is located on private land. The San Felipe population is also located on private lands and within the limits of the City of San Jose. The Service is unaware of any recent surveys of the San Felipe population; however, the population was estimated at 100,000 individuals in 1999 (Weiss 2006, p. 1). The Silver Creek Hills population is the last of the four populations within the Coyote Ridge unit. The population was considered relatively large, with approximately 115,000 individuals in 1993 (Weiss 2006, p. 1). This population was significantly affected by the development of a residential area and associated golf course (Ranch on Silver Creek) in the late 1990s. As a result of formal consultation on the Ranch on Silver Creek, approximately 473 ac (191 ha) owned by William Lyon Homes were preserved and are being managed for the bay checkerspot butterfly. Approximately 40 adults were observed at the Silver Creek Preserve in 2006 (WRA 2006, p. i).

Unit 6: Tulare Hill

Unit 6 consists of 747 ac (302 ha) in Santa Clara County. The unit is located in the middle of the Santa Clara Valley, south of San Jose, and west of the crossing of Metcalf Road and Highway 101. The unit was occupied by the bay checkerspot butterfly at the time of listing and is noted as one of the locations occupied in Harrison et al. (1988, p. 362). The unit is currently occupied, contains all the features essential to the conservation of the subspecies, and is essential to the conservation of the subspecies because it acts as a population center and because it provides a dispersal corridor across Coyote Valley. This unit is the closest suitable intervening habitat between the Coyote Ridge core population and most of the other populations in Santa Clara County, primarily those on the western side of Coyote Valley. Hundreds of butterflies have been observed on the southern half of the unit from 2001–2006 (Weiss 2006, p. 1). We have determined that the long-term viability of the bay checkerspot butterfly in Santa Clara County depends on the presence of corridors for dispersal of adults between Coyote Ridge and the other units in Santa Clara County. Tulare Hill is an ideal location for such a corridor because of the narrowness of the valley at this location, the limited amount of development currently present, the presence of high elevations on the hill that may attract butterflies over the highways and developed areas, and the presence of suitable habitat on Tulare Hill itself. Migrant butterflies from either Santa Teresa Hills or Coyote Ridge may settle on Tulare Hill, contributing individuals to the population within this unit, and adults from Tulare Hill may migrate to the adjacent habitat areas. Public lands within this unit include parts of Coyote Creek Park, Metcalf Park, and Santa Teresa County Park. Roughly half of Tulare Hill itself is within the limits of the City of San Jose; the remainder is on private lands in unincorporated Santa Clara County. Approximately 114 ac (46 ha) of the unit is currently protected under a conservation easement and is managed for the bay checkerspot butterfly by the Land Trust for Santa Clara County. The unit is bisected by transmission lines from Pacific Gas &

Electric (PG&E), and the operations and maintenance of these lines are the subject of a proposed Safe Harbor Agreement and Habitat Conservation Agreement for the bay checkerspot butterfly.

Unit 7: Santa Teresa Hills

Unit 7 consists of 3,987 ac (1,613 ha) in Santa Clara County. The unit lies north of Bailey Avenue, McKean Road, and Almaden Road; south of developed areas of the city of Santa Clara; and west of Santa Teresa Boulevard. The unit abuts Unit 6. This unit was not specifically mentioned in the listing rule, but an unspecified number of bay checkerspot butterflies were observed in this unit in 1988 (CNDDB 2006, p. 26). The unit is currently occupied (Arnold 2007, p. 1; and H.T. Harvey and Associates 1998, p. 11), and contains the physical and biological features essential to the conservation of the subspecies. Further, it includes the largest block of undeveloped habitat containing all the PCEs west of U.S. Route 101 in Santa Clara County. In addition, due to the prevailing winds, Unit 7 may experience less air pollution (i.e., nitrogen and ammonia deposition) than the units on the east side of Coyote Valley.

Unit 8: Calero Reservoir

Unit 8 consists of 1,543 ac (624 ha) in Santa Clara County. The unit is south of McKean Road and east of the town of New Almaden, Almaden Road, and Alamitos Creek. This unit was occupied at the time of listing (CNDDB 2006, p. 26), is currently occupied, and contains all the features essential for the conservation of the subspecies. The unit is less than 0.5 mi (0.8 km) south of Unit 7 and 1 mi (1.6 km) east of Unit 9. It is also 3.3 mi (5.3 km) southwest of the core population in Unit 5, and this distance is well within the dispersal capabilities of the subspecies; therefore, Unit 8 is an important component of the species' Santa Clara County metapopulation. The unit is comprised of over 1,400 ac (567 ha) of mapped serpentine soils on public land. The majority of the unit is within the Calero County Park and managed by Santa Clara County Department of Parks and Recreation. The remainder is owned and managed by the Santa Clara Valley Water District.

Unit 9: Kalana Hills

Unit 9 consists of two separate subunits: Subunit 9A (170 ac (69 ha)) and Subunit 9B (56 ac (22 ha)), totaling 226 ac (91 ha) in Santa Clara County. The unit is located on the southwest side of the Santa Clara Valley between Laguna Avenue and San Bruno Avenue. The unit (both 9A and 9B) was occupied by the bay checkerspot butterfly at the time of listing and is noted as one of the locations occupied in Harrison et al. (1988, p. 362), and adults were again observed during the last survey of the unit in 1997 (CNDDB 2006, p. 23). The two subunits include four hilltop, serpentine outcrops, which contain all the features essential for the conservation of the species, and some intervening grassland. The intervening grassland does not contain the larval host plants or serpentine or similar soils, but does contain PCEs 1, 3, and 4 and connects the four serpentine outcrops. Unit 5 lies about 2.1 mi (3.2 km) to the northeast, Unit 7 is 1 mi (1.6 km) to the northwest, the Unit 8 is 1 mi (1.6 km) to the west, and Unit 10 about 2.2 mi (3.5 km) to the southeast. The essential physical and biological features in Unit 9 assist in maintaining the metapopulation dynamics of the subspecies by providing habitat for the subspecies within dispersal distance of adjacent or nearby critical habitat units. Because of its proximity to several other large population centers for the bay checkerspot butterfly, we expect the Kalana Hills subunits to be regularly occupied by the subspecies and assist in maintaining the metapopulation dynamics for the subspecies. If, as is possible given the bay checkerspot butterfly's large population swings, the butterfly's population in these subunits were to become extirpated, it is likely to be reestablished by bay checkerspot butterflies immigrating from adjacent sites. These subunits act as a ''stepping stone'' to adjacent or nearby units. A portion of the largest and northernmost serpentine outcrop within subunit 9A is within the limits of the City of San Jose; the remainder of the subunit is on private lands in unincorporated Santa Clara County. Subunit 9A's northeast boundaries are bordered by the proposed Coyote Valley Specific Plan.

Unit 10: Morgan Hill

Unit 10 consists of 507 ac (205 ha) in Santa Clara County. The unit is northwest of the City of Morgan Hill, east of Willow Springs Road, and south of Hale Avenue. This unit was historically occupied in the late 1980s and is described in the CNDDB as an ''active site'' (CNDDB 2006) for the subspecies. The unit was occupied at the time of listing and is noted as one of the locations occupied in Harrison et al. (1988, p. 362); adult butterflies were observed in the unit in 1997 (CNDDB 2006). Unit 10 is essential to the conservation of the subspecies because it has large areas of serpentine soils and grassland with a variety of slope exposures, contains all the PCE's, and serves as a ''stepping stone'' between the southernmost occurrences of the subspecies (Unit 12) and the populations to the north. The unit is 1.5 mi (2.4 km) southwest Unit 5 and 2.2 mi (3.5 km) southeast of the Unit 9, provides dispersal habitat from adjacent critical habitat units, and provides habitat during years with particularly favorable weather conditions that support expanding populations of the bay checkerspot butterfly. This unit is comprised mostly of private property, a portion of which is within the limits of the City of Morgan Hill and the rest in unincorporated Santa Clara County. Murphy Springs Park, a small city park, is within this unit.

Unit 11: Bear Ranch

Unit 11 consists of 393 ac (159 ha) in Santa Clara County. The unit is adjacent to Coyote Reservoir and is entirely contained within the Coyote Lake—Harvey Bear Ranch County Park. The bay checkerspot butterfly was known to occur within this unit in the mid-1970s, but was considered extirpated in the listing rule; however, bay checkerspot butterflies were observed in this unit in 1994, 1997, and 1999 (CNDDB 2006, p. 15; Launer 2000, p. 1). This unit is currently occupied and is the most southern occurrence of the bay checkerspot butterfly on the east side of Coyote Valley. Unit 11 is essential for the conservation of the subspecies because it assists in maintaining the metapopulation dynamics of the subspecies by providing adjacent or nearby habitat for bay checkerspot butterflies to disperse to or use as foraging or resting habitat during longer dispersal events. The unit contains all the features essential for the conservation of the species. This unit is underlined by both serpentine and serpentine-like soils. There are two patches of serpentine soils separated north/south by intermittent woody vegetation; these patches are surrounded by grasslands underlined by serpentine-like soils that provide adequate dispersal corridors between the two patches.

Unit 12: San Martin

Unit 12 consists of 502 ac (203 ha) in Santa Clara County. The unit is located in the western foothills of the Santa Clara Valley. This unit was occupied at the time of listing, is currently occupied, and contains all the features essential for the conservation of the subspecies. The unit has extensive areas of serpentine soils interspersed with grasslands that have PCEs 1, 3, 4, and

5. These areas are important for dispersal between higher-quality habitats within the unit that contain all the necessary features essential for conservation. The unit lies entirely on private lands in unincorporated Santa Clara County, about 4 mi (6.4 km) west-southwest of Unit 11, 4 mi (6.4 km) southeast of Unit 10, and 6 mi (9.6 km) south of Unit 5's core area. This unit is the southernmost occurrence of the bay checkerspot butterfly. The adjacent Cordevalle Golf Club has purchased approximately 298 ac (121 ha) of property within the unit and has developed a management plan for the property and are currently working to establish a conservation easement for preservation as open space. A portion of the proposed open space, approximately 42.3 ac (17.1 ha) will be managed to benefit serpentine species including the bay checkerspot butterfly.

Table 3 below provides approximate areas (ac, ha) of lands that meet the definition of critical habitat but that we are proposing to exclude from the final critical habitat rule. Table 3 also provides our reasons for the proposed exclusion.

TABLE 3.—AREA (IN ACRES (AC), HECTARES (HA)) BEING PROPOSED FOR EXCLUSION FROM THE FINAL CRITICAL HABITAT DESIGNATION FOR THE BAY CHECKERSPOT BUTTERFLY IN SAN MATEO AND SANTA CLARA COUNTIES, CALIFORNIA

[Area estimates reflect all land within proposed critical habitat unit boundaries]

Critical habitat unit	Specific reason	Land ownership	Areas meeting the definition of critical habitat	Area proposed for exclusion
1. San Bruno Mountain, San Mateo County.	HCP; Amendment 5 will add the bay checkerspot.	Local	577 ac (234 ha)	577 ac (234 ha).
		Private	198 ac (80 ha)	198 ac (80 ha).
Total			775 ac (314 ha)	775 ac (314 ha).

Effects of Critical Habitat Designation

Section 7 Consultation

Section 7(a)(2) of the Act requires Federal agencies, including the Service, to ensure that actions they fund, authorize, or carry out are not likely to destroy or adversely modify critical habitat. Decisions by the 5th and 9th Circuit Court of Appeals have invalidated our definition of ''destruction or adverse modification'' (50 CFR 402.02) (see *Gifford Pinchot Task Force* v. *U.S. Fish and Wildlife Service*, 378 F.3d 1059 (9th Cir. 2004) and *Sierra Club* v. *U.S. Fish and Wildlife Service et al.*, 245 F.3d 434, 442 (5th Cir. 2001)), and we do not rely on this regulatory definition when analyzing whether an action is likely to destroy or adversely modify critical habitat. Under the statutory provisions of the Act, destruction or adverse modification on the basis of whether, with implementation of the proposed Federal action, the affected critical habitat would remain functional (or retain the current ability for the PCEs to be functionally established) to serve its intended conservation role for the species.

Section 7(a)(4) of the Act requires Federal agencies to confer with the Service on any action that is likely to jeopardize the continued existence of a species proposed for listing or result in destruction or adverse modification of proposed critical habitat. This is a procedural requirement only, as any conservation recommendations in a conference report or opinion are strictly advisory. However, once a species proposed for listing becomes listed, or proposed critical habitat is designated as final, the full prohibitions of section 7(a)(2) apply to any discretionary Federal action.

The primary utility of the conference procedures is to allow a Federal agency to maximize its opportunity to adequately consider species proposed for listing and proposed critical habitat and to avoid potential delays in implementing their proposed action because of the section 7(a)(2) consultation process, if we list those species or designate critical habitat. We may conduct conferences either informally or formally. We typically use informal conferences as a means of providing advisory conservation recommendations to assist the agency in eliminating conflicts that the proposed action may cause. We typically use formal conferences when we or the Federal agency believes the proposed action is likely to jeopardize the continued existence of the species proposed for listing or adversely modify proposed critical habitat.

We generally provide the results of an informal conference in a conference report, while we provide the results of a formal conference in a conference opinion. We typically prepare conference opinions on proposed species or critical habitat in accordance with procedures contained at 50 CFR 402.14, as if the proposed species were already listed or the proposed critical habitat was already designated. We may adopt the conference opinion as the biological opinion when the species is listed or the critical habitat is designated, if no substantial new information or changes in the proposed action alter the content of the opinion (see 50 CFR 402.10(d)).

If a species is listed or critical habitat is designated, section 7(a)(2) of the Act requires Federal agencies to ensure that activities they authorize, fund, or carry out are not likely to jeopardize the continued existence of the species or to destroy or adversely modify its critical habitat. If a Federal action may affect a listed species or its critical habitat, the responsible Federal agency (action agency) must enter into consultation with us. As a result of this consultation, we document compliance with the procedural requirements of section 7(a)(2) through our issuance of:

(1) A concurrence letter for Federal actions that may affect, but are not likely to adversely affect, listed species or critical habitat; or

(2) A biological opinion for Federal actions that may affect, and are likely to adversely affect, listed species or critical habitat.

When we issue a biological opinion concluding that a project is likely to jeopardize the continued existence of a listed species or destroy or adversely modify critical habitat, we also provide reasonable and prudent alternatives to the project, if any are identifiable. We define ''Reasonable and prudent alternatives'' at 50 CFR 402.02 as alternative actions identified during consultation that:

- Can be implemented in a manner consistent with the intended purpose of the action,
- Can be implemented consistent with the scope of the Federal agency's legal authority and jurisdiction,
- Are economically and technologically feasible, and
- Would, in the Director's opinion, avoid jeopardizing the continued existence of the listed species or destroying or adversely modifying critical habitat.

Reasonable and prudent alternatives can vary from slight project

modifications to extensive redesign or relocation of the project. Costs associated with implementing a reasonable and prudent alternative are similarly variable.

Regulations at 50 CFR 402.16 require Federal agencies to reinitiate consultation on previously reviewed actions in instances where we have listed a new species or subsequently designated critical habitat that may be affected and the Federal agency has retained discretionary involvement or control over the action (or the agency's discretionary involvement or control is authorized by law). Consequently, some Federal agencies may request reinitiation of consultation with us on actions for which formal consultation has been completed, if those actions may affect subsequently listed species or designated critical habitat.

Federal activities that may affect the bay checkerspot butterfly or its designated critical habitat require section 7 consultation under the Act. Activities on State, Tribal, local, or private lands requiring a Federal permit (such as a permit from the U.S. Army Corps of Engineers under section 404 of the Clean Water Act (33 U.S.C. 1251 et seq.) or a permit from us under section 10 of the Act) or involving some other Federal action (such as funding from the Federal Highway Administration, Federal Aviation Administration, or the Federal Emergency Management Agency) are also subject to the section 7 consultation process. Federal actions not affecting listed species or critical habitat, and actions on State, Tribal, local, or private lands that are not federally funded, authorized, or permitted, do not require section 7 consultations.

Application of the ''Adverse Modification'' Standard

The key factor related to the adverse modification determination is whether, with implementation of the proposed Federal action, the affected critical habitat would continue to serve its intended conservation role for the species, or would retain its current ability for the primary constituent elements to be functionally established and maintained. Activities that may destroy or adversely modify critical habitat are those that alter the PCEs to an extent that appreciably reduces the conservation value of critical habitat for the bay checkerspot butterfly.

Section 4(b)(8) of the Act requires us to briefly evaluate and describe in any proposed or final regulation that designates critical habitat, activities involving a Federal action that may destroy or adversely modify such habitat, or that may be affected by such designation.

Activities that, when carried out, funded, or authorized by a Federal agency, may affect critical habitat and therefore should result in consultation for the bay checkerspot butterfly include, but are not limited to:

(1) Actions that would cause ground disturbance, including, but not limited to, trenching, grading, and discing. Ground disturbance would likely result in the loss of larval and adult food plants and in an increased mortality of larvae as a result of starvation. Individual bay checkerspot butterfly larvae, pupae, and eggs could be crushed during any of these activities. A reduction in adult nectar sources could result in reduced fecundity and longevity of females, and possibly reduced longevity of males. Ground disturbance may also result in a reduction in the number of stable holes and cracks that larvae use during diapause, which would result in an increased risk of predation.

(2) Actions which would remove, destroy, or alter vegetation, including, but not limited to, changes in grazing regimes, prescribed burns, or other vegetation management strategies. These actions would have similar effects as those associated with ground disturbance, such as loss of larval and adult food plants. Prescribed burns may also result in direct injury or mortality to larvae, pupae, and eggs if conducted during the fall or early spring. Grazing is likely to result in some individual larvae, eggs, and pupae being trampled or inadvertently eaten.

(3) Construction activities that destroy, degrade, or fragment critical habitat, such as urban and suburban development (i.e., subdivisions, road building, placement of utilities, golf courses, trail construction, off-road vehicle use, etc.) These activities could result in the permanent loss of habitat or create barriers to movement between patches of habitat. Construction activities could result in crushing of both larval and adult food plants as well as larvae, pupae, and eggs. Adults may be injured or killed as a result of collisions with vehicles. In addition, larvae crossing open areas of construction sites in search of edible host plants could be trampled. Urban development could also cause changes in hydrology of bay checkerspot butterfly habitat. The presence of unseasonal water could result in an alteration in the life cycle of larval and adult food plants, such that plant growth and blooming are out of phase with the life cycle of the subspecies, resulting in increased mortality of both larvae and adults. Artificially wet conditions may also result in an increase in parasites or diseases that could reduce larval and adult survival. In addition, changes in hydrology that result in reduced water levels in nearby creeks could result in increased mortality of adults during periods of prolonged spring drought. Activities that result in direct loss of habitat would also result in direct loss of individuals of all life stages of the bay checkerspot butterfly. Loss of habitat patches that are ''stepping stone'' habitats would result in increased distances between other patches of suitable habitat and reduce the likelihood of distant patches being colonized, thus disrupting the metapopulation dynamics of the subspecies, resulting in a decrease in the stability of core populations and possible extinction of the bay checkerspot butterfly.

(4) Direct application on, or drift onto, critical habitat of pesticides, herbicides, fertilizers, or other chemicals or biological agents. Drift or runoff of chemicals, pesticides, and other biological agents could kill or injure bay checkerspot butterflies through direct toxicity or by harming their food plants.

(5) Deposition or release onto critical habitat of nitrogen compounds, such as NO_X and ammonia. Nitrogen deposition (i.e., NO_X and ammonia), in and around bay checkerspot butterfly habitat would result in nutrient enrichment of serpentine and serpentine-like soils. This enrichment allows for the successful invasion of exotic and invasive plants, which out-compete native forbs and grasses, into serpentine grasslands, resulting in lower densities of larval and adult food plants. Lower densities of both larval and adult food plants would result in fewer larval and adult bay checkerspot butterflies.

We consider all of the units proposed as revised critical habitat, as well as those that have been proposed for exclusion, to contain features essential to the conservation of the bay checkerspot butterfly. All units are within the geographic range of the species, all were occupied by the species at the time of listing or are currently occupied (based on most recent observations made), and are likely to be used by the bay checkerspot butterfly. Federal agencies already consult with us on activities in areas currently occupied by the bay checkerspot butterfly, as well as unoccupied critical habitat units to ensure that their actions do not jeopardize the continued existence of the bay checkerspot butterfly or result in adverse modification of critical habitat.

Exemptions or Exclusions

Application of Section 4(b)(2) of the Act

Section 4(b)(2) of the Act states that the Secretary must designate and revise critical habitat on the basis of the best available scientific data after taking into consideration the economic impact, national security impact, and any other relevant impact of specifying any particular area as critical habitat. The Secretary may exclude an area from critical habitat if he determines that the benefits of such exclusion outweigh the benefits of specifying such area as part of the critical habitat, unless he determines, based on the best scientific data available, that the failure to designate such area as critical habitat will result in the extinction of the species. In making that determination, the Congressional record is clear that the Secretary has broad discretion regarding which factor(s) to use and how much weight to give to any factor.

Under section 4(b)(2) of the Act, in considering whether to exclude a particular area from the designation, we must identify the benefits of including the area in the designation, identify the benefits of excluding the area from the designation, and determine whether the benefits of exclusion outweigh the benefits of inclusion. If we consider an exclusion then we must determine whether excluding the area would result in the extinction of the species.

In the following sections, we address a number of general issues that are relevant to the exclusions we have considered. In addition, we are conducting an economic analysis of the impacts of the proposed revised critical habitat designation and related factors, which will be available for public review and comment when it is complete. Based on public comment on that document, the proposed revised designation itself, and the information in the final economic analysis, the Secretary may exclude from critical habitat additional areas beyond those identified in this assessment under the provisions of section 4(b)(2) of the Act. This is also addressed in our implementing regulations at 50 CFR 424.19.

Portions of proposed Units 5, 6, and 12 are currently protected or proposed for protection under conservation easements (see unit descriptions above for acreages). Some easements were established for the protection of the California red-legged frog (*Rana aurora draytonii*) or the California tiger salamander (*Ambystoma californiense*), while others were established for the bay checkerspot butterfly. These areas were considered for exclusion, but not proposed because some of them do not have management plans and some only provide management plans for the tiger salamander or the California red-legged frog. Those areas with conservation easements that specifically provide protection for the bay checkerspot butterfly were not considered for exclusion because the easements are not believed to be sufficiently funded to adequately deal with nonnative invasive plants, such as the recent invasion of barbed goat grass (*Aegilops triuncialis*). A conservation easement that has been proposed for a portion of Unit 12 has not been finalized and is therefore also not proposed for exclusion.

Benefits of Designating Critical Habitat

Regulatory Benefits

The consultation provisions under section 7(a) of the Act constitute the regulatory benefits of critical habitat. As discussed above, Federal agencies must consult with us on actions that may affect critical habitat and must avoid destroying or adversely modifying critical habitat. Prior to our designation of critical habitat, Federal agencies consult with us on actions that may affect a listed species and must refrain from undertaking actions that are likely to jeopardize the continued existence of the species. Thus, the analysis of effects to critical habitat is a separate and different analysis from that of the effects to the species. Therefore, the difference in outcomes of these two analyses represents the regulatory benefit of critical habitat. For some species, and in some locations, the outcome of these analyses will be similar, because effects on habitat will often result in effects on the species. However, the regulatory standard is different: The jeopardy analysis looks at the action's impact on survival and recovery of the species, while the adverse modification analysis looks at the action's effects on the designated critical habitat's contribution to the species' conservation. This will, in many instances, lead to different results and different regulatory requirements.

For 30 years prior to the Ninth Circuit court's decision in *Gifford Pinchot,* we combined the jeopardy standard with the standard for destruction or adverse modification of critical habitat when evaluating Federal actions that affected currently occupied critical habitat. However, the court ruled that the two standards are distinct and that adverse modification evaluations require consideration of impacts on species recovery. Thus, critical habitat designations may provide greater benefits to the recovery of a species than would listing alone.

There are two limitations to the regulatory effect of critical habitat. First, a consultation is required only where there is a Federal nexus (an action authorized, funded, or carried out by any Federal agency)—if there is no Federal nexus, designation itself does not restrict actions that destroy or adversely modify critical habitat. Second, the designation only limits destruction or adverse modification. By its nature, the prohibition on adverse modification is designed to ensure no degradation of those areas that contain the physical and biological features essential to the conservation of the species or of unoccupied areas that are essential to the conservation of the species. Critical habitat designation alone, however, does not require specific steps toward recovery.

Once an agency determines that consultation under section 7 of the Act is necessary, the process may conclude informally when we concur in writing that the proposed Federal action is not likely to adversely affect critical habitat. However, if we determine through informal consultation that adverse impacts are likely to occur, then we would initiate formal consultation, which would conclude when we issue a biological opinion on whether the proposed Federal action is likely to result in destruction or adverse modification of critical habitat.

For critical habitat, a biological opinion that concludes in a determination of no destruction or adverse modification may contain discretionary conservation recommendations to minimize adverse effects to primary constituent elements, but it would not suggest the implementation of any reasonable and prudent alternative. We suggest reasonable and prudent alternatives to the proposed Federal action only when our biological opinion results in an adverse modification conclusion.

We believe that in many instances the regulatory benefit of critical habitat is low when compared to voluntary conservation efforts or management plans. The conservation achieved through implementing HCPs or other habitat management plans can be greater than what we achieve through multiple site-by-site, project-by-project, section 7 consultations involving consideration of critical habitat. Such habitat management plans may commit resources to implement long-term management and protection to particular habitat for at least one and possibly additional listed or sensitive species. Section 7 consultations commit

Federal agencies to preventing adverse modification of critical habitat caused by the particular project only, and not to providing conservation or long-term benefits to areas not affected by the proposed project. Thus, any HCP or other habitat management plan that considers enhancement or recovery as the management standard may often provide as much or more benefit than a consultation for critical habitat designation conducted under the standards required by the Ninth Circuit in the *Gifford Pinchot* decision.

In providing the framework for the consultation process, the previous section applies to all the following discussions of benefits of inclusion or exclusion of critical habitat.

Educational Benefits

A benefit of including lands in critical habitat is that designation of critical habitat serves to educate landowners, state and local governments, and the public regarding the potential conservation value of an area. This helps focus and promote conservation efforts by other parties by clearly delineating areas of high conservation value for the bay checkerspot butterfly. In general, critical habitat designation always has educational benefits; however, in some cases, they may be redundant with other educational efforts. For example, HCPs have significant public input and may largely duplicate the educational benefits of a critical habitat designation. A second benefit of including lands in critical habitat is that the designation of critical habitat would inform state agencies and local governments about areas that could be conserved under state laws or local ordinances.

The information provided in the previous section applies to all the following discussions of benefits of inclusion or exclusion of critical habitat.

Recovery Benefits

The process of designating critical habitat as described in the Act requires that the Service identify those lands on which are found the physical or biological features essential to the conservation of the species that may require special management considerations or protection. In identifying those lands, the Service must consider the recovery needs of the species, such that the habitat that is identified, if managed, could provide for the survival and recovery of the species. Furthermore, once critical habitat has been designated, Federal agencies must consult with the Service under section 7(a)(2) of the Act to ensure that their actions will not adversely modify designated critical habitat or jeopardize the continued existence of the species. As noted in the Ninth Circuit's *Gifford Pinchot* decision, the Court ruled that the jeopardy and adverse modification standards are distinct, and that adverse modification evaluations require consideration of impacts to the recovery of species. Thus, through the section 7(a)(2) consultation process, critical habitat designations provide recovery benefits to species by ensuring that Federal actions will not destroy or adversely modify designated critical habitat.

It is beneficial to identify those lands that are necessary for the conservation of the species and that, if properly managed, would further recovery measures for the species, which is beneficial. The process of proposing and finalizing a critical habitat rule provides the Service with the opportunity to determine which lands are essential for conservation of the species, as well as allowing for the identification of the primary constituent elements or features essential for conservation of the species on those lands. The designation process includes peer review and public comment on the identified features and lands proposed for designation and/or exclusion. This process is valuable to land owners and managers in developing conservation management plans for identified lands, as well as any other occupied habitat or other suitable habitat that may not have been included in the Service's determination of essential habitat.

However, the designation of critical habitat does not require that any management or recovery actions take place on the lands included in the designation. Even in cases where consultation has been initiated under section 7(a)(2) of the Act, the end result of consultation is to avoid jeopardy to the species and/or adverse modification of its critical habitat, but not per se to manage remaining lands or institute recovery actions on remaining lands. Conversely, management plans institute proactive actions over the lands they encompass and are put in place to remove or reduce known threats to a species or its habitat and therefore implement recovery actions. We believe that the movement towards the conservation of a species and/or its habitat that could be achieved through the designation of critical habitat, in some cases, is less than the movement towards conservation that could be achieved through the implementation of a management plan, which includes species-specific provisions and considers enhancement or recovery of listed species as the management standard over the same lands. Consequently, implementation of any HCP or management plan that considers enhancement or recovery as the management standard will often provide as much or more benefit than a consultation for critical habitat designation conducted under the standards required by the Ninth Circuit in the *Gifford Pinchot* decision.

The information provided in the previous section applies to all the following discussions of benefits of inclusion or exclusion of critical habitat.

Conservation Partnerships on Non-Federal Lands

Most federally listed species in the United States will not recover without the cooperation of non-Federal landowners. More than 60 percent of the United States is privately owned (National Wilderness Institute 1995, p. 2), and at least 80 percent of endangered or threatened species occur either partially or solely on private lands (Crouse et al. 2002, p. 720). Stein et al. (1995, p. 400) found that only about 12 percent of listed species were found almost exclusively on Federal lands (90 to 100 percent of their known occurrences restricted to Federal lands) and that 50 percent of federally listed species are not known to occur on Federal lands at all.

Given the distribution of listed species with respect to land ownership, conservation of listed species in many parts of the United States is dependent upon working partnerships with a wide variety of entities and the voluntary cooperation of many non-Federal landowners (Wilcove and Chen 1998, p. 1407; Crouse et al. 2002, p. 720; James 2002, p. 271). Building partnerships and promoting voluntary cooperation of landowners are essential to our understanding the status of species on non-Federal lands, and necessary for us to implement recovery actions such as reintroducing listed species and restoring and protecting habitat.

Many non-Federal landowners derive satisfaction from contributing to endangered species recovery. We promote these private-sector efforts through the Department of the Interior's Cooperative Conservation philosophy. Conservation agreements with non-Federal landowners (HCPs, safe harbor agreements, other conservation agreements, easements, and State and local regulations) enhance species conservation by extending species protections beyond those available through section 7 consultations. In the past decade, we have encouraged non-Federal landowners to enter into conservation agreements, based on the

view that we can achieve greater species conservation on non-Federal land through such partnerships than we can through regulatory methods (61 FR 63854; December 2, 1996).

Many private landowners, however, are wary of the possible consequences of attracting endangered species to their property. Mounting evidence suggests that some regulatory actions by the Federal Government, while well-intentioned and required by law, can (under certain circumstances) have unintended negative consequences for the conservation of species on private lands (Wilcove et al. 1996, pp. 5–6; Bean 2002, pp. 2–3; Conner and Mathews 2002, pp. 1–2; James 2002, pp. 270–271; Koch 2002, pp. 2–3; Brook et al. 2003, pp. 1639–1643). Many landowners fear a decline in their property value due to real or perceived restrictions on land-use options where threatened or endangered species are found. Consequently, harboring endangered species is viewed by many landowners as a liability. This perception results in anti-conservation incentives because maintaining habitats that harbor endangered species represents a risk to future economic opportunities (Main et al. 1999, pp. 1264–1265; Brook et al. 2003, pp. 1644–1648).

According to some researchers, the designation of critical habitat on private lands significantly reduces the likelihood that landowners will support and carry out conservation actions (Main et al. 1999, p. 1263; Bean 2002, p. 2; Brook et al. 2003, pp. 1644–1648). The magnitude of this negative outcome is greatly amplified in situations where active management measures (such as reintroduction, fire management, and control of invasive species) are necessary for species conservation (Bean 2002, pp. 3–4). We believe that the judicious use of excluding specific areas of non-federally owned lands from critical habitat designations can contribute to species recovery and provide a superior level of conservation than critical habitat alone.

The purpose of designating critical habitat is to contribute to the conservation of threatened and endangered species and the ecosystems upon which they depend. The outcome of the designation, triggering regulatory requirements for actions funded, authorized, or carried out by Federal agencies under section 7 of the Act, can sometimes be counterproductive to its intended purpose on non-Federal lands. Thus the benefits of excluding areas that are covered by effective partnerships or other conservation commitments can often be high.

Benefits of Excluding Lands With Approved Management Plans

The benefits of excluding lands with approved long-term management plans from critical habitat designation include relieving landowners, communities, and counties of any additional regulatory burden that might be imposed by a critical habitat designation. Most HCPs and other conservation plans take many years to develop and, upon completion, are consistent with the recovery objectives for listed species that are covered within the plan area. Many conservation plans also provide conservation benefits to unlisted sensitive species. Imposing an additional regulatory review as a result of the designation of critical habitat may undermine these conservation efforts and partnerships designed to proactively protect species to ensure that listing under the Act will not be necessary. Designation of critical habitat within the boundaries of management plans that provide conservation measures for a species could be viewed as a disincentive to those entities currently developing these plans or contemplating them in the future, because one of the incentives for undertaking conservation is greater ease of permitting where listed species will be affected. Addition of a new regulatory requirement would remove a significant incentive for undertaking the time and expense of management planning. In fact, designating critical habitat in areas covered by a pending HCP or conservation plan could result in the loss of some species' benefits if participants abandon the planning process, in part because of the strength of the perceived additional regulatory compliance that such designation would entail. The time and cost of regulatory compliance for a critical habitat designation do not have to be quantified for them to be perceived as additional Federal regulatory burden sufficient to discourage continued participation in plans targeting listed species' conservation.

A related benefit of excluding lands within management plans from critical habitat designation is the unhindered, continued ability it gives us to seek new partnerships with future plan participants including States, counties, local jurisdictions, conservation organizations, and private landowners, which together can implement conservation actions that we would be unable to accomplish otherwise. If lands within approved management plan areas are designated as critical habitat, it would likely have a negative effect on our ability to establish new partnerships to develop these plans, particularly plans that address landscape-level conservation of species and habitats. By preemptively excluding these lands, we preserve our current partnerships and encourage additional conservation actions in the future.

Furthermore, both HCP and Natural Community Conservation Planning (NCCP) HCP applications require a consultation, which would review the effects of all HCP-covered activities that might adversely impact the species under a jeopardy standard, including possibly significant habitat modification (see definition of ''harm'' at 50 CFR 17.3), even without the critical habitat designation. In addition, Federal actions not covered by the HCP in areas occupied by listed species would still require consultation under section 7(a)(2) of the Act, and we would review these actions for possibly significant habitat modification, in accordance with the definition of harm referenced above.

The information provided in the previous section applies to all the following discussions of benefits of inclusion or exclusion of critical habitat.

Proposed Exclusions Under Section 4(b)(2) of the Act

After consideration under section 4(b)(2) of the Act, we are proposing to exclude the following area of habitat from final revised critical habitat for the bay checkerspot butterfly: Lands covered under the San Bruno Mountain Habitat Conservation Plan. We believe that the lands' value for conservation has been addressed by existing protective actions and is appropriate for exclusion under the provisions of section 4(b)(2). We specifically solicit comment, however, on the proposed exclusion of these areas. A detailed analysis of our proposed exclusion of these lands under section 4(b)(2) of the Act is provided in the paragraphs that follow.

Habitat Conservation Plan Lands—Exclusions Under Section 4(b)(2) of the Act

We consider a current plan to provide adequate management or protection if it meets the following criteria: (1) The plan is complete and provides the same or better level of protection from adverse modification or destruction than that provided through a consultation under section 7(a)(2) of the Act; (2) there is a reasonable expectation that the conservation management strategies and actions will be implemented based on past practices, written guidance, or regulations; and (3) the plan provides conservation strategies and measures consistent with

currently accepted principles of conservation biology. We believe that the plan described below fulfills these criteria, and we are considering the exclusion from critical habitat of non-Federal lands covered by this plan that provide for the conservation of the bay checkerspot butterfly. We are requesting comments on the benefit to the bay checkerspot butterfly from conservation measures established by the San Bruno Mountain Habitat Conservation Plan.

San Bruno Mountain Habitat Conservation Plan (SBMHCP)

The SBMHCP was originally completed in November 1982, and we issued a 30-year section 10(a)(1)(B) permit to the permittees on March 4, 1983. The permit (PRT 2–9818) expires on March 4, 2013, unless it is renewed (Jones and Stokes 2007, p. 1–2). San Bruno Mountain is located on the northern end of the San Francisco Peninsula, south of the San Mateo-San Francisco County line, and is bordered to the north by Daly City, to the east by the City of Brisbane, to the south by the City of South San Francisco, and to the west by the City of Colma. The SBMHCP is comprised of 3,600 ac (1,457 ha) of which approximately 3,500 ac (1,416 ha) are open space. To date, there have been four amendments to the SBMHCP. Amendment five is currently in development with a draft expected to be published in the **Federal Register** near the end of 2007 or early 2008. We expect a finalized amendment in 2008.

Participants in Amendment five of the SBMHCP include the City of Brisbane and the County of San Mateo. The existing incidental take permit covers 3,380 ac (1,368 ha) of San Bruno Mountain and includes the following species: Mission blue butterfly, San Bruno elfin butterfly, and San Francisco garter snake (*Thamnophis sirtalis tetrataenia*) (Jones and Stokes 2007, p. 1–2). Unit 1 of proposed revised critical habitat is completely contained within the SBMHCP, with the majority of Unit 1 in San Bruno Mountain County Park. Amendment five would add the bay checkerspot butterfly and Callippe silverspot butterfly to the incidental take permit of the SBMHCP and would reconfigure the development plan on the Northwest Ridge to allow take of covered species on approximately 26 ac (11 ha) on the Northwest Ridge. Amendment five would also increase funding for management and monitoring activities throughout the Mountain with the establishment of an endowment. The Northeast Ridge covers 228 ac (92 ha) located in the northeast corner of San Bruno Mountain. The majority, approximately 90 percent, of the site is annual grassland, while the surrounding land use includes single-family neighborhoods across Guadalupe Canyon Parkway to the north, undeveloped open space to the east, multi-family residential development to the south, and the State and County Park to the west (Jones and Stokes 2007, p. 2–3). The Northeast Ridge does not include areas historically occupied by the bay checkerspot butterfly.

Amendment five to the SBMHCP includes proposed and ongoing conservation actions designed to benefit both the bay checkerspot butterfly and Callippe silverspot butterfly. Conservation actions include: (1) Vegetation management (i.e., prescribed fire, herbicide application, mowing, and grazing); (2) replanting and restoration; and (3) monitoring. The Service expects Amendment five will provide substantial protection for all of the primary constituent elements (PCEs) for the bay checkerspot butterfly, and that protected lands will receive the special management required through funding mechanisms that will be implemented under Amendment five of the SBMHCP.

Benefits of Inclusion

The primary benefit to designation of critical habitat is the requirement that federal agencies consult with the Service to ensure that their actions are not likely to result in the destruction or adverse modification of critical habitat. If critical habitat were designated in this area, PCEs in the area would be protected from destruction or adverse modification by federal actions using a conservation standard based on the Ninth Circuit's decision in *Gifford Pinchot*. This requirement would be in addition to the requirement that proposed Federal actions would not be likely to jeopardize the species' continued existence. However, since the SBMHCP area is not currently occupied by the species, consultation for activities that may adversely affect the bay checkerspot butterfly, including possibly significant habitat modification (see definition of ''harm'' at 50 CFR 17.3) would not be required under section 7. Therefore, inclusion of portions of the SBMHCP in critical habitat would require consultation if Federal actions would result in adverse modification of critical habitat.

As discussed above, Amendment five of the SBMHCP is expected to provide substantial protection of the PCEs and special management of essential habitat for the bay checkerspot butterfly on SBMHCP conservation lands. We expect the SBMHCP to provide a greater level of management for the bay checkerspot butterfly on private lands than would designation of critical habitat on private lands because the management activities associated with the addition of the bay checkerspot butterfly and Callippe silverspot butterfly within the SBMHCP will improve habitat for both species within the SBMHCP. Moreover, inclusion of these non-Federal lands as critical habitat would not necessitate additional management and conservation activities that would exceed the approved SBMHCP and its implementing agreement. As a result, we do not anticipate that any action on these lands would destroy or adversely modify the areas proposed as revised critical habitat. Therefore, we do not expect that including those areas in the final designation would lead to any changes to actions on the conservation lands to avoid destroying or adversely modifying that habitat.

A benefit of including an area in critical habitat is the education of landowners and the public regarding the potential conservation value of these areas. The inclusion of an area in critical habitat may focus and contribute to conservation efforts by other parties by clearly delineating areas of high conservation values for certain species. However, we believe that this conservation benefit has largely been achieved for the bay checkerspot butterfly through listing of the species, the previous critical habitat designation, and the ongoing preparation of the Santa Clara County HCP.

Benefits of Exclusion

The benefits of excluding lands within HCPs from critical habitat designation include relieving landowners, communities, and counties of any additional regulatory burden that might be imposed by a critical habitat designation. Many HCPs, particularly large regional HCPs, take many years to develop and, upon completion, become regional conservation plans that are consistent with the recovery objectives for listed species that are covered within the plan area. In fact, designating critical habitat in areas covered by a pending HCP could result in the loss of species' benefits if participants abandon the voluntary HCP process, in part because of the strength of the perceived additional regulatory compliance that such designation would entail. The time and cost of regulatory compliance for a critical habitat designation do not have to be quantified for them to be perceived as additional Federal regulatory burden sufficient to discourage continued voluntary participation in plans targeting the conservation of listed species.

Furthermore, an HCP application must itself be consulted upon. Such a consultation would review the effects of all activities covered by the HCP that may adversely affect the species, including possibly significant habitat modification (see definition of ''harm'' at 50 CFR 17.3), even without the critical habitat designation. In addition, Federal actions not covered by the HCP in areas occupied by listed species would still require consultation under section 7 of the Act and would be reviewed for possibly significant habitat modification in accordance with the definition of harm referenced above. This standard also would apply to all consultation conducted in the interim period prior to finalization of an HCP, whether incidental take exemption is provided under section 7 or section 10 of the Act.

Benefits of Exclusion Outweigh Benefits of Inclusion

We have reviewed and evaluated the conservation measures identified in the SBMHCP. Based on this evaluation, we currently find that the benefits of exclusion of the lands essential to the conservation of the bay checkerspot butterfly in the planning area for the SBMHCP outweigh the benefits of including Unit 1 in our final critical habitat designation. Our final determination will be made after we receive public comment on this proposed revised critical habitat designation.

The exclusion of these lands from critical habitat will help preserve the partnerships that we have developed with local jurisdictions and project proponents in the development of the SBMHCP. The educational benefits of critical habitat, including informing the public of areas that are essential for the long-term conservation of the species, are still accomplished from material provided on our Web site and through public notice and comment procedures required to establish the Santa Clara County HCP. The public also has been informed through the public participation that occurs during the development of each amendment to the SBMHCP. For these reasons, we believe that designating critical habitat has little benefit in areas covered by the SBMHCP.

Exclusion Will Not Result in Extinction of the Species

We believe that exclusion of these lands would not result in the extinction of the bay checkerspot butterfly as:

(1) The area is not currently occupied;

(2) The lands Unit 1 are in are within the boundaries of the SBMHCP; and

(3) Ongoing and new conservation measures designed for the bay checkerspot butterfly and Callippe silverspot butterfly will enhance and protect the majority of habitat for the bay checkerspot butterfly on San Bruno Mountain.

Actions that may adversely affect the subspecies within Unit 1 are expected to be covered under the SBMHCP. In addition, if the bay checkerspot butterfly becomes established within Unit 1, it will be protected from take under section 9 of the Act. The exclusion leaves these protections unchanged from those that would exist if the excluded areas were to be designated as critical habitat.

Critical habitat is being proposed for the bay checkerspot butterfly in other areas that will be accorded the protection from adverse modification by Federal actions using the conservation standard based on the Ninth Circuit decision in *Gifford Pinchot.* Additionally, the subspecies occurs on lands protected and managed either explicitly for the subspecies or indirectly through more general objectives to protect natural values; this factor, in concert with the other protections provided under the Act for these lands absent designation of critical habitat and in concert with protections afforded the species by the other lands proposed for designation as critical habitat, leads us to find that exclusion of these lands would not result in extinction of the bay checkerspot butterfly. We do not believe that this exclusion would result in the extinction of the subspecies because the SBMHCP will: (1) Preserve approximately 3,500 ac (1,416 ha) of open space, which includes the vast majority of bay checkerspot butterfly habitat within the SBMHCP; (2) incorporate a range of habitat management and enhancement measures; and (3) include a monitoring program for several listed butterfly species including the bay checkerspot butterfly.

Economics

An analysis of the economic impacts of proposing revised critical habitat for the bay checkerspot butterfly is being prepared. We will announce the availability of the draft economic analysis as soon as it is completed, at which time we will seek public review and comment. When completed, copies of the draft economic analysis will be available for downloading from the Internet at *http://www.fws.gov/sacramento/,* or by contacting the Sacramento Fish and Wildlife Office directly (see **ADDRESSES**).

Peer Review

In accordance with our joint policy published in the **Federal Register** on July 1, 1994 (59 FR 34270), we are obtaining the expert opinions of at least three appropriate and independent specialists regarding this proposed rule. The purpose of peer review is to ensure that our proposed revised critical habitat designation is based on scientifically sound data, assumptions, and analyses. We will send copies of this proposed rule to these peer reviewers immediately following publication in the **Federal Register**. We will invite these peer reviewers to comment during the public comment period on the specific assumptions and conclusions regarding the proposed designation of revised critical habitat.

We will consider all comments and information received during the comment period on this proposed rule during preparation of a final rulemaking. Accordingly, the final decision may differ from this proposal.

Public Hearings

The Act provides for one or more public hearings on this proposal, if we receive any requests for hearings. We must receive your request for a public hearing within 45 days after the date of this publication in the **Federal Register**. Send your request to the person named in the **FOR FURTHER INFORMATION CONTACT** section. We will schedule public hearings on this proposal, if any are requested, and announce the dates, times, and places of those hearings in the **Federal Register** and local newspapers at least 15 days before the first hearing.

Clarity of the Rule

Executive Order 12866 (Regulatory Planning and Review) requires each agency to write regulations and notices that are easy to understand. We invite your comments on how to make this proposed rule easier to understand, including answers to questions such as the following: (1) Are the requirements in the proposed rule clearly stated? (2) Does the proposed rule contain technical jargon that interferes with the clarity? (3) Does the format of the proposed rule (grouping and order of the sections, use of headings, paragraphing, and so forth) aid or reduce its clarity? (4) Is the description of the notice in the **SUPPLEMENTARY INFORMATION** section of the preamble helpful in understanding the proposed rule? (5) What else could we do to make this proposed rule easier to understand?

Send a copy of any comments on how we could make this proposed rule easier

to understand to: Office of Regulatory Affairs, Department of the Interior, Room 7229, 1849 C Street, NW., Washington, DC 20240. You may e-mail your comments to this address: *Exsec@ios.doi.gov.*

Required Determinations

Regulatory Planning and Review

In accordance with Executive Order 12866, this document is a significant rule in that it may raise novel legal and policy issues, but it is not anticipated to have an annual effect on the economy of $100 million or more or affect the economy in a material way. Due to the tight timeline for publication in the **Federal Register,** the Office of Management and Budget (OMB) has not formally reviewed this rule. We are preparing a draft economic analysis of this proposed action, which will be available for public comment, to determine the economic consequences of designating the specific area as critical habitat. This economic analysis also will be used to determine compliance with Executive Order 12866, Regulatory Flexibility Act, Small Business Regulatory Enforcement Fairness Act, Executive Order 12630, Executive Order 13211, and Executive Order 12875.

Further, Executive Order 12866 directs Federal agencies promulgating regulations to evaluate regulatory alternatives (Office of Management and Budget, Circular A–4, September 17, 2003). Pursuant to Circular A–4, once it has been determined that the Federal regulatory action is appropriate, then the agency will need to consider alternative regulatory approaches. Since the determination of critical habitat is a statutory requirement under the Act, we must then evaluate alternative regulatory approaches, where feasible, when promulgating a designation of critical habitat.

In developing our designations of critical habitat, we consider economic impacts, impacts to national security, and other relevant impacts under section 4(b)(2) of the Act. Based on the discretion allowable under this provision, we may exclude any particular area from the designation of critical habitat providing that the benefits of such exclusion outweigh the benefits of specifying the area as critical habitat and that such exclusion would not result in the extinction of the subspecies. As such, we believe that the evaluation of the inclusion or exclusion of particular areas, or combination of both, constitutes our regulatory alternative analysis.

Within these areas, the types of Federal actions or authorized activities that we have identified as potential concerns are listed above in the section on Section 7 Consultation. The availability of the draft economic analysis will be announced in the **Federal Register** and in local newspapers so that it is available for public review and comments. At that time the draft economic analysis will be available from the Internet Web site at *http://www.fws.gov/sacramento/* or by contacting the Sacramento Fish and Wildlife Office directly (see **ADDRESSES**).

Regulatory Flexibility Act (5 U.S.C. 601 et seq.)

Under the Regulatory Flexibility Act (5 U.S.C. 601 et seq., as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996), whenever an agency is required to publish a notice of rulemaking for any proposed or final rule, it must prepare and make available for public comment a regulatory flexibility analysis that describes the effects of the rule on small entities (small businesses, small organizations, and small government jurisdictions). However, no regulatory flexibility analysis is required if the head of the agency certifies the rule will not have a significant economic impact on a substantial number of small entities. The SBREFA amended the Regulatory Flexibility Act (RFA) to require Federal agencies to provide a statement of the factual basis for certifying that the rule will not have a significant economic impact on a substantial number of small entities.

At this time, the Service lacks the available economic information necessary to provide an adequate factual basis for the required RFA finding. Therefore, the RFA finding is deferred until completion of the draft economic analysis prepared under section 4(b)(2) of the Act and Executive Order 12866. This draft economic analysis will provide the required factual basis for the RFA finding. Upon completion of the draft economic analysis, the Service will publish a notice of availability of the draft economic analysis of the proposed revised designation and reopen the public comment period for the proposed revised designation. The Service will include with the notice of availability, as appropriate, an initial regulatory flexibility analysis or a certification that the rule will not have a significant economic impact on a substantial number of small entities accompanied by the factual basis for that determination. The Service has concluded that deferring the RFA finding until completion of the draft economic analysis is necessary to meet the purposes and requirements of the RFA. Deferring the RFA finding in this manner will ensure that the Service makes a sufficiently informed determination based on adequate economic information and provides the necessary opportunity for public comment.

Unfunded Mandates Reform Act (2 U.S.C. 1501 et seq.)

In accordance with the Unfunded Mandates Reform Act (2 U.S.C. 1501), the Service makes the following findings:

(a) This rule will not produce a Federal mandate. In general, a Federal mandate is a provision in legislation, statute, or regulation that would impose an enforceable duty upon State, local, or Tribal governments, or the private sector and includes both ''Federal intergovernmental mandates'' and ''Federal private sector mandates.'' These terms are defined in 2 U.S.C. 658(5)–(7). ''Federal intergovernmental mandate'' includes a regulation that ''would impose an enforceable duty upon State, local, or tribal governments'' with two exceptions. It excludes ''a condition of Federal assistance.'' It also excludes ''a duty arising from participation in a voluntary Federal program,'' unless the regulation ''relates to a then-existing Federal program under which $500,000,000 or more is provided annually to State, local, and tribal governments under entitlement authority,'' if the provision would ''increase the stringency of conditions of assistance'' or ''place caps upon, or otherwise decrease, the Federal Government's responsibility to provide funding,'' and the State, local, or Tribal governments ''lack authority'' to adjust accordingly. At the time of enactment, these entitlement programs were: Medicaid; AFDC work programs; Child Nutrition; Food Stamps; Social Services Block Grants; Vocational Rehabilitation State Grants; Foster Care, Adoption Assistance, and Independent Living; Family Support Welfare Services; and Child Support Enforcement. ''Federal private sector mandate'' includes a regulation that ''would impose an enforceable duty upon the private sector, except (i) a condition of Federal assistance or (ii) a duty arising from participation in a voluntary Federal program.''

The designation of critical habitat does not impose a legally binding duty on non-Federal government entities or private parties. Under the Act, the only regulatory effect is that Federal agencies must ensure that their actions do not destroy or adversely modify critical

habitat under section 7. While non-Federal entities that receive Federal funding, assistance, or permits, or that otherwise require approval or authorization from a Federal agency for an action may be indirectly impacted by the designation of critical habitat, the legally binding duty to avoid destruction or adverse modification of critical habitat rests squarely on the Federal agency. Furthermore, to the extent that non-Federal entities are indirectly impacted because they receive Federal assistance or participate in a voluntary Federal aid program, the Unfunded Mandates Reform Act would not apply, nor would critical habitat shift the costs of the large entitlement programs listed above on to State governments.

(b) Due to current public knowledge of the species' protection, the prohibition against take of the species both within and outside of the designated areas, the fact that the majority of the areas are already designated as critical habitat, and the fact that critical habitat provides no incremental restrictions, we do not anticipate that this rule will significantly or uniquely affect small governments. As such, Small Government Agency Plan is not required. However, we will further evaluate this issue as we conduct our economic analysis and revise this assessment if appropriate.

Executive Order 13211

On May 18, 2001, the President issued an Executive Order (E.O. 13211; Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use) on regulations that significantly affect energy supply, distribution, and use. Executive Order 13211 requires agencies to prepare Statements of Energy Effects when undertaking certain actions. While this proposed rule to designate revised critical habitat for the bay checkerspot butterfly is a significant regulatory action under Executive Order 12866 in that it may raise novel legal and policy issues, it is not expected to significantly affect energy supplies, distribution, or use. Therefore, this action is not a significant energy action, and no Statement of Energy Effects is required. However, we will, further evaluate this issue as we conduct our economic analysis and review and revise this assessment as warranted.

Takings

In accordance with Executive Order 12630 (''Government Actions and Interference with Constitutionally Protected Private Property Rights''), we have analyzed the potential takings implications of designating revised critical habitat for the bay checkerspot butterfly in a takings implications assessment. The takings implications assessment concludes that this proposed revised designation of critical habitat for the bay checkerspot butterfly does not pose significant takings implications. However, we will, further evaluate this issue as we conduct our economic analysis and review and revise this assessment as warranted.

Federalism

In accordance with Executive Order 13132 (Federalism), this rule does not have significant Federalism effects. A Federalism assessment is not required. In keeping with Department of the Interior and Department of Commerce policy, we requested information from, and coordinated development of, this proposed revised critical habitat designation with appropriate State resource agencies in California. The designation of critical habitat in areas currently occupied by the bay checkerspot butterfly imposes no additional restrictions to those currently in place and, therefore, has little incremental impact on State and local governments and their activities. The designation may have some benefit to these governments in that the areas that contain the features essential to the conservation of the species are more clearly defined, and the PCEs of the habitat necessary to the conservation of the species are specifically identified. While making this definition and identification does not alter where and what federally sponsored activities may occur, it may assist these local governments in long-range planning (rather than having the government wait for case-by-case section 7 consultations to occur).

Civil Justice Reform

In accordance with Executive Order 12988 (Civil Justice Reform), the Office of the Solicitor has determined that this rule does not unduly burden the judicial system and meets the requirements of sections 3(a) and 3(b)(2) of the Order. We have proposed revised critical habitat in accordance with the provisions of the Act. This proposed rule uses standard property descriptions and identifies the PCEs within the designated areas to assist the public in understanding the habitat needs of the bay checkerspot butterfly.

Paperwork Reduction Act of 1995 (44 U.S.C. 3501 et seq.)

This rule does not contain any new collections of information that require approval by OMB under the Paperwork Reduction Act. This rule will not impose recordkeeping or reporting requirements on State or local governments, individuals, businesses, or organizations. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

National Environmental Policy Act (NEPA) (42 U.S.C. 4321 et seq.)

It is our position that, outside the jurisdiction of the Tenth Federal Circuit, we do not need to prepare environmental analyses as defined by the NEPA in connection with designating critical habitat under the Act. We published a notice outlining our reasons for this determination in the **Federal Register** on October 25, 1983 (48 FR 49244). This assertion was upheld by the Ninth Circuit Court of Appeals (*Douglas County* v. *Babbitt,* 48 F.3d 1495 (9th Cir. Ore. 1995), cert. denied 116 S. Ct. 698 (1996)).

Government-to-Government Relationship With Tribes

In accordance with the President's memorandum of April 29, 1994, ''Government-to-Government Relations with Native American Tribal Governments'' (59 FR 22951), Executive Order 13175, and the Department of Interior's manual at 512 DM 2, we readily acknowledge our responsibility to communicate meaningfully with recognized Federal Tribes on a government-to-government basis. In accordance with Secretarial Order 3206 of June 5, 1997, ''American Indian Tribal Rights, Federal-Tribal Trust Responsibilities, and the Endangered Species Act,'' we readily acknowledge our responsibilities to work directly with tribes in developing programs for healthy ecosystems, to acknowledge that tribal lands are not subject to the same controls as Federal public lands, to remain sensitive to Indian culture, and to make information available to tribes. We have determined that there are no tribal lands occupied at the time of listing that contain the features essential for the conservation, and no Tribal lands that are unoccupied areas that are essential for the conservation, of the bay checkerspot butterfly. Therefore, revised critical habitat for the bay checkerspot butterfly has not been proposed on Tribal lands.

Proposed Regulation Promulgation

Accordingly, we propose to amend part 17, subchapter B of chapter I, title 50 of the Code of Federal Regulations, as set forth below:

PART 17—[AMENDED]

1. The authority citation for part 17 continues to read as follows:

Authority: 16 U.S.C. 1361–1407; 16 U.S.C. 1531–1544; 16 U.S.C. 4201–4245; Pub. L. 99–625, 100 Stat. 3500; unless otherwise noted.

2. In § 17.95(i), revise the entry for ''Bay checkerspot butterfly (*Euphydryas editha bayensis*)'' to read as follows:

§ 17.95 Critical habitat—wildlife.

* * * * *

(i) Insects.

* * * * *

Bay Checkerspot Butterfly (*Euphydryas editha bayensis*)

(1) Critical habitat units are depicted for San Mateo and Santa Clara Counties, California, on the maps below.

(2) The primary constituent elements of critical habitat for the bay checkerspot butterfly are the habitat components that provide:

(i) The presence of annual or perennial grasslands with little to no overstory that provide north/south and east/west slopes with a tilt of more than 7 degrees for larval host plant survival during periods of atypical weather (e.g., drought). Common grassland species include wild oats (*Avena fatua*), soft chess (*Bromus hordeaceus*), California oatgrass (*Danthonia californica*), purple needlegrass (*Nassella pulchra*), and Idaho fescue (*Festuca idahoensis*); less abundant in these grasslands are annual and perennial forbs such as filaree (*Erodium botrys*), true clovers (*Trifolium* sp.), dwarf plantain (*Plantago erecta*), and turkey mullein (*Croton setigerus*).

(ii) The presence of the primary larval host plant, dwarf plantain (*Plantago erecta*) and at least one of the secondary host plants, purple owl's-clover (*Castilleja densiflora*) or exserted paintbrush (*Castilleja exserta*), are required for reproduction, feeding, and larval development.

(iii) The presence of adult nectar sources for feeding. Common nectar sources include desertparsley (*Lomatium* spp.), California goldfields (*Lasthenia californica*), tidy-tips (*Layia platyglossa*), sea muilla (*Muilla maritima*), scytheleaf onion (*Allium falcifolium*), false babystars (*Linanthus androsaceus*), and intermediate fiddleneck (*Amsinckia intermedia*).

(iv) Aquatic features such as wetlands, springs, seeps, streams, lakes, and ponds and their associated banks, that provide moisture during periods of spring drought; these features can be ephemeral, seasonal, or permanent.

(v) Soils derived from serpentinite ultramafic rock (Montara, Climara, Henneke, Hentine, and Obispo soil series) or similar soils (Inks, Candlestick, Los Gatos, Fagan, and Barnabe soil series) that provide areas with fewer aggressive, nonnative plant species for larval host plant and adult nectar plant survival and reproduction.

(vi) The presence of stable holes and cracks in the soil, and surface rock outcrops that provide shelter for the larval stage of the bay checkerspot butterfly during summer diapause.

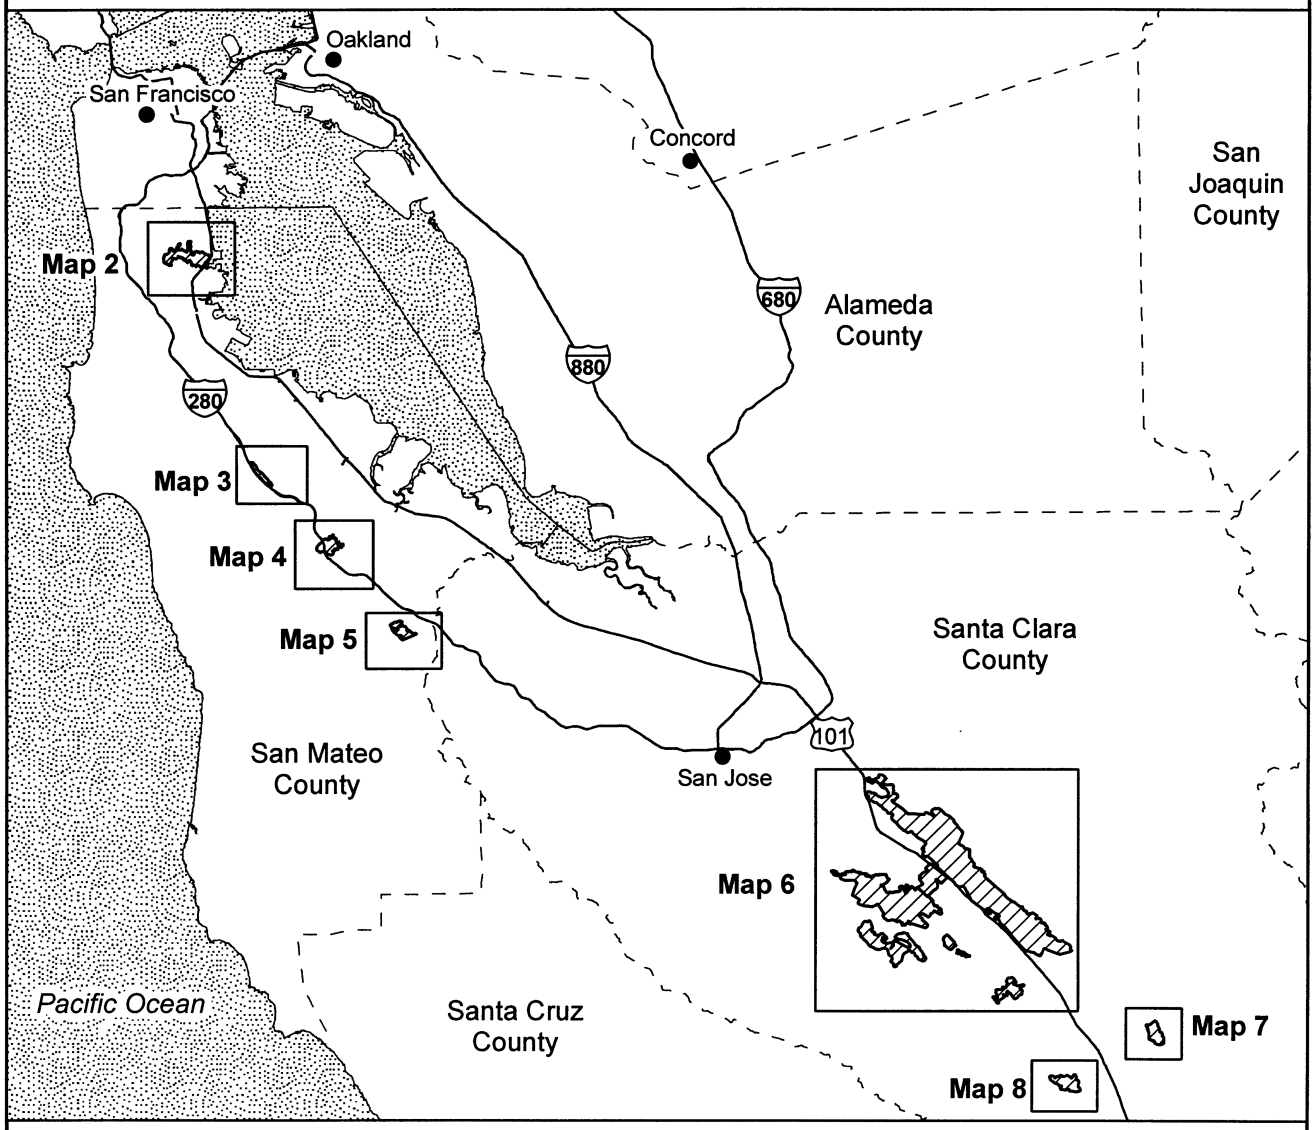
(3) Critical habitat does not include manmade structures (such as buildings, aqueducts, runways, roads, and other paved areas) and the land on which they are located existing on the effective date of this rule and not containing one or more of the primary constituent elements.

(4) Critical habitat map units. Data layers defining map units were created on a base of USGS 7.5′ quadrangles using USDA National Agricultural Imagery Program (NAIP) county-wide MrSID compressed mosaics of 1 meter resolution and natural color aerial photography from summer 2005. Critical habitat units were then mapped using Universal Transverse Mercator (UTM) zone 10, North American Datum (NAD) 1983 coordinates.

(5) Note: Index map for bay checkerspot butterfly critical habitat units (Map 1) follows:

BILLING CODE 4310–55–P

Map 1. Index Map of Critical Habitat for the Bay Checkerspot Butterfly



(6) Unit 1 for bay checkerspot butterfly: San Bruno Mountain, San Mateo County, California. From USGS 1:24,000 scale quadrangle San Francisco South.

(i) Unit 1: Land bounded by the following UTM zone 10, NAD 1983 coordinates (E,N):; 52853, 4170062; 52856, 4170038; 52862, 4170043; 52866, 4170045; 52889, 4170061; 52915, 4170074; 52940, 4170084; 52970, 4170091; REMINDERS

The items in this list were editorially compiled as an aid to Federal Register users. Inclusion or exclusion from this list has no legal significance.

RULES GOING INTO EFFECT AUGUST 22, 2007

AGRICULTURE DEPARTMENT
Animal and Plant Health Inspection Service
Exportation and importation of animals and animal products:
Cattle export; pre-export tuberculosis and brucellosis testing requirement; elimination; published 7-23-07

COMMERCE DEPARTMENT
National Oceanic and Atmospheric Administration
Fishery conservation and management:
Northeastern United States fisheries—
Summer flounder, scup, and black sea bass; published 7-23-07

ENVIRONMENTAL PROTECTION AGENCY
Pesticides; tolerances in food, animal feeds, and raw agricultural commodities:
Fipronil; published 8-22-07
Pyriproxyfen; published 8-22-07

FEDERAL COMMUNICATIONS COMMISSION
Common carrier services:
Federal-State Joint Board on Universal Service—
Rural high-cost universal service; Multi-Association Group plan; correction; published 8-22-07
Telecommunications Act of 1996; implementation—
Universal service policy; correction; published 8-22-07

HEALTH AND HUMAN SERVICES DEPARTMENT
Food and Drug Administration
Food additives:
Glycerol ester of tall oil rosin; published 8-22-07

TRANSPORTATION DEPARTMENT
Federal Aviation Administration
Airworthiness directives:
Airbus; published 7-18-07
British Aerospace Regional Aircraft; published 7-18-07

COMMENTS DUE NEXT WEEK

AGRICULTURE DEPARTMENT
Agricultural Marketing Service
Mango promotion, research, and information order:
Terms of office provision; amendment; comments due by 8-29-07; published 7-30-07 [FR E7-14612]
National Organic Program:
National List of Allowed and Prohibited Substances; amendments; comments due by 8-27-07; published 6-27-07 [FR 07-03142]

AGRICULTURE DEPARTMENT
Animal and Plant Health Inspection Service
Export certification:
Wood packaging material; comments due by 8-31-07; published 7-2-07 [FR E7-12770]
Phytosanitary treatments; cold treatment enclosures and requirements; comments due by 8-31-07; published 7-2-07 [FR E7-12768]

COMMERCE DEPARTMENT
National Oceanic and Atmospheric Administration
Marine mammals:
Commercial fishing authorizations—
Fisheries categorized according to frequency of incidental takes; 2008 list; comments due by 8-27-07; published 6-28-07 [FR E7-12556]

DEFENSE DEPARTMENT
Engineers Corps
Danger zones and restricted areas:
Kuluk Bay, Adak, AK; comments due by 8-29-07; published 7-30-07 [FR E7-14651]
Manchester Fuel Depot and Sinclair Inlet, WA; comments due by 8-30-07; published 7-31-07 [FR E7-14652]
Port Townsend, Indian Island, Walan Point, WA; comments due by 8-30-07; published 7-31-07 [FR E7-14650]

ENERGY DEPARTMENT
Federal Energy Regulatory Commission
Electric utilities (Federal Power Act):
Cross-subsidization restrictions on affiliate transactions; comments due by 8-30-07; published 7-31-07 [FR E7-14618]
Limited blanket authorizations; comments due by 8-30-07; published 7-31-07 [FR E7-14619]

ENVIRONMENTAL PROTECTION AGENCY
Air pollution; standards of performance for new stationary sources:
Petroleum refineries; comments due by 8-27-07; published 6-28-07 [FR E7-12584]
Air quality implementation plans; approval and promulgation; various States; air quality planning purposes; designation of areas:
Pennsylvania; comments due by 8-27-07; published 7-27-07 [FR E7-14589]
Air quality implementation plans; approval and promulgation; various States:
Arizona and Nevada; comments due by 8-30-07; published 7-31-07 [FR E7-14473]
California; comments due by 8-31-07; published 8-1-07 [FR E7-14586]
Indiana; comments due by 8-29-07; published 7-30-07 [FR E7-14476]
Air quality implementation plans; approval and promulgation; various States; air quality planning purposes; designation of areas:
Indiana; comments due by 8-30-07; published 7-31-07 [FR E7-14741]
Air quality implementation plans; approval and promulgation; various States:
Iowa; comments due by 8-31-07; published 8-1-07 [FR E7-14868]
Massachusetts; comments due by 8-31-07; published 8-1-07 [FR E7-14887]
Texas; comments due by 8-29-07; published 7-30-07 [FR E7-14485]
Wisconsin; comments due by 8-30-07; published 7-31-07 [FR E7-14465]
Pesticides; tolerances in food, animal feeds, and raw agricultural commodities:

LIST OF PUBLIC LAWS

This is a continuing list of public bills from the current session of Congress which have become Federal laws. It may be used in conjunction with ''PLUS'' (Public Laws Update Service) on 202–741–6043. This list is also available online at *http://www.archives.gov/federal-register/laws.html*.

The text of laws is not published in the **Federal Register** but may be ordered in ''slip law'' (individual pamphlet) form from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 (phone, 202–512–1808). The text will also be made available on the Internet from GPO Access at *http://www.gpoaccess.gov/plaws/index.html*. Some laws may not yet be available.

H.R. 2863/P.L. 110–75

To authorize the Coquille Indian Tribe of the State of Oregon to convey land and interests in land owned by the Tribe. (Aug. 13, 2007; 121 Stat. 724)

H.R. 2952/P.L. 110–76

To authorize the Saginaw Chippewa Tribe of Indians of the State of Michigan to convey land and interests in lands owned by the Tribe. (Aug. 13, 2007; 121 Stat. 725)

H.R. 3006/P.L. 110–77

To improve the use of a grant of a parcel of land to the State of Idaho for use as an agricultural college, and for other purposes. (Aug. 13, 2007; 121 Stat. 726)

S. 375/P.L. 110–78

To waive application of the Indian Self-Determination and Education Assistance Act to a specific parcel of real property transferred by the United States to 2 Indian tribes in the State of Oregon, and for other purposes. (Aug. 13, 2007; 121 Stat. 727)

S. 975/P.L. 110–79

Granting the consent and approval of the Congress to an interstate forest fire protection compact. (Aug. 13, 2007; 121 Stat. 730)

S. 1716/P.L. 110–80

To amend the U.S. Troop Readiness, Veterans' Care, Katrina Recovery, and Iraq Accountability Appropriations Act, 2007, to strike a requirement relating to forage producers. (Aug. 13, 2007; 121 Stat. 734)

Last List August 13, 2007

CORRECTION

In the last **List of Public Laws** printed in the *Federal Register* on August 13, 2007, H.R. 2025, Public Law 110-65, and H.R. 2078, Public Law 110-67, were printed incorrectly. They should read as follows:

H.R. 2025/P.L. 110–65

To designate the facility of the United States Postal Service located at 11033 South State Street in Chicago, Illinois, as the ''Willye B. White Post Office Building''. (Aug. 9, 2007; 121 Stat. 568)

H.R. 2078/P.L. 110–67

To designate the facility of the United States Postal Service located at 14536 State Route 136 in Cherry Fork, Ohio, as the ''Staff Sergeant Omer T. 'O.T.' Hawkins Post Office''. (Aug. 9, 2007; 121 Stat. 570)

Public Laws Electronic Notification Service (PENS)

PENS is a free electronic mail notification service of newly enacted public laws. To subscribe, go to *http://listserv.gsa.gov/archives/publaws-l.html*

Note: This service is strictly for E-mail notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
