

methamphetamine-related questions are included to identify risk and protective factors for methamphetamine. These questions identify demographic information which will be useful in categorizing results. Some program specific questions were suggested and agreed upon by the grantees in the review of the questionnaire.

All applicants must describe their evaluation plans in their applications, and funded grantees are required to conduct an evaluation of their projects. The evaluation should be designed to provide regular feedback in order to facilitate project improvements. The evaluation must include both process and outcome components which must measure change relating to project goals and objectives over time compared to baseline information. Control or comparison groups are not required. Applicants must consider their

evaluation plans when preparing the project budget. The grantees will collect data from program participants at three time periods: baseline, exit, and 6-month follow-up. Each methamphetamine grantee will collect program specific questions in addition to NOM questions. Similar to the submission process for the Government Performance and Results Act (GPRA), grantees will submit their NOM-Meth data to their respective program Project Officers as well as to the Center for Substance Abuse Prevention's (CSAP) Data Coordination and Consolidation Center (DCCC) two times per year. The OMB approved NOMs incorporate the GPRA measures for reporting and are approved for all PRNS. DCCC will be responsible for data collection and analysis across grantee sites, while individual grantees will be responsible for their own analyses.

The burden is greatly reduced by the fact that the data collection process can be conducted by submitting electronic files. In many cases, some programs can collect all data online. The SAMHSA Prevention Platform has publicly available online data collection and reporting tools such as the database builder, which can be used to meet these reporting requirements. Other tools are under development. CSAP is currently developing a web-based data entry tool that will assist grantees in submitting their data electronically. This data entry tool will reduce the burden on those grantees that do not yet have the capacity to submit large batch files. The DCCC will use this data for secondary analysis that will aid CSAP in responding to GPRA, Office of National Drug Control Policy as well as other federal reporting requirements.
