

nonsampling error. If these tests provide successful results, current procedures may be revised and incorporated into the main study (e.g., questionnaire changes). Particular attention will be given to minimizing the impact of design changes so that survey data continue to remain comparable over time.

Field test activities are expected to include improving response rates among persons residing in controlled access communities (locked apartment

buildings, gated communities, college dormitories, etc.), and conducting a nonresponse follow-up study. Cognitive laboratory testing will be conducted prior to the implementation of significant questionnaire modifications. These questionnaire modifications will also be pre-tested and the feasibility of text-to-speech software determined. To understand the effectiveness of current monetary incentive, a new incentive study will be conducted with varying incentive amounts. The relationship

between incentives and veracity of reporting will also be examined. Tests will also be designed to determine the feasibility of alternative sample designs and modes of data collection. Lastly, a customer satisfaction survey of NSDUH data users will be conducted to improve the utility of the NSDUH data. Some of the above studies may be combined to introduce survey efficiencies.

The average annual burden associated with these activities over a three-year period is summarized below:

Activity	Number of responses	Responses per respondent	Average burden per response (hr.)	Total burden (hrs.)
a. Improving participation among controlled access and other hard-to-reach populations	417	1	1.0	417
b. Nonresponse follow-up	2000	1	1.0	2000
c. Incentive Study	2000	1	1.0	2000
d. Validity study (including testing methods for biological data specimens)	2500	1	1.0	2500
e. Cognitive laboratory testing	90	1	1.0	90
f. Annual questionnaire pre-test	670	1	1.0	670
