

self coding. Companies that operate in more than one but less than nine industries will receive an ACE-1(M) form. Companies that operate in nine or more industries will receive an ACE-1(L) form.

All ACE-1 forms request sales and receipts information to calculate industry investment to sales ratios and to assist in verifying that consolidated company data are being reported. Asset and depreciation information, also collected, assists in measuring changes in the Nation's capital stock estimates.

Capital expenditures data are also collected annually from a small sample of nonemployer enterprises using Form ACE-2. This collection is intended to better represent the total capital expenditures activity of all firms.

The ACES is an integral part of the Federal Government's effort to improve the quality and usefulness of National economic statistics. Federal agencies, including the Census Bureau, use these data to improve and supplement ongoing statistical programs.

The Census Bureau uses the data to improve the quality of monthly economic indicators of investment. The Bureau's Value of New Construction Put in Place survey currently uses the ACES data to benchmark its industrial buildings data. The Bureau of Economic Analysis (BEA) uses the data in refining and evaluating annual estimates of investment in structures and equipment in the national income and product accounts, compiling annual input-output tables, and computing gross domestic product by industry. The Federal Reserve Board uses the data to improve estimates of investment indicators for monetary policy. The Bureau of Labor Statistics uses the data to improve estimates of capital stocks for productivity analysis. In addition, industry analysts use the data for market analysis, economic forecasting, product development, and business planning.
