Proposed Project

Follow-up Survey of Chronic Fatigue Syndrome in Georgia—New—Coordinating Center for Infectious Diseases (CCID), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

CDC is planning a follow-up study of chronic fatigue syndrome (CFS) in metropolitan, urban and rural communities in Georgia. This is in response to Congressional recommendations that the Centers for Disease Control and Prevention (CDC) utilize advanced surveillance

methodologies for CFS to examine its natural history and identify risk factors and biomarkers.

In 2004, OMB approved the information collection, Survey of Chronic Fatigue Syndrome and Chronic Unwellness in Georgia, under OMB Number 0920–0638, which provided baseline information on prolonged fatiguing illness in metropolitan, urban, and rural regions in Georgia. Data from the proposed Follow-up Study of Chronic Fatigue Syndrome in Georgia will be used to describe the clinical course of CFS and evaluate behavioral and biochemical factors associated with outcome. This follow-up study will also determine access to and utilization of health care by persons with CFS and

measure direct and indirect economic burden due to the illness. As part of a control strategy, the information from this follow up study will be used in national and pilot regional provider education programs.

The proposed study continues the Georgia survey using similar methodology and data collection instruments. This follow-up study begins with a detailed telephone interview to obtain additional data on participant health status during the last twelve month period. Eligible subjects will be asked to participate in clinical evaluations. There will be no cost to respondents other than their time. The estimated total annualized burden hours are 861.

ESTIMATED ANNUALIZED BURDEN HOURS

Respondents	Number of respondents	Number of responses per respondent	Average burden/response (in hours)
Follow-up Study Detailed Interview	2,870	1	18/60

Dated: November 15, 2007.

Proposed Project

Use of a Reader Response Postcard for Workers Notified of Results of Epidemiologic Studies Conducted by the National Institute for Occupational Safety and Health (NIOSH)—

Reinstatement—The National Institute for Occupational Safety and Health (NIOSH), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

NIOSH, under Section 20(a)(1), (a)(4), (a)(7)(c), and Section 22 (d), (e)(5)(7) of the Occupational Safety and Health Act (29 U.S.C. 669), has the responsibility to “conduct (directly or by grants or contracts) research, experiments, and demonstrations relating to occupational safety and health, including studies of psychological factors involved, and relating to innovative methods, techniques, and approaches for dealing with occupational safety and health problems.” NIOSH also has the responsibility to “conduct special research, experiments, and demonstrations relating to occupational safety and health as are necessary to explore new problems, including those created by new technology in occupational safety and health [e.g., worker notification], which may require ameliorative action beyond that which is otherwise provided for in the operating provisions of the Act.”

Since 1977, the National Institute for Occupational Safety and Health (NIOSH) has been developing methods and materials for the notification of subjects of its epidemiological studies. NIOSH involvement in notifying workers of past exposures relates primarily to informing surviving cohort members of the findings of retrospective

cohort studies conducted by NIOSH. Current policy within NIOSH is to notify subjects of the results of its epidemiologic studies. The extent of the notification effort depends upon the level of excess mortality or the extent of the disease or illness found in the cohort. Current notification efforts range from posting results at the facilities studied to mailing individual letter notifications to surviving cohort members and other stakeholders. The Industry-wide Studies Branch (IWSB) of NIOSH, Division of Surveillance, Hazard Evaluation, and Field Studies (DSHEFS), usually conducts about two or three notifications per year, which typically require individual letters mailed to cohorts ranging in size from 200–20,000 workers each. In order to assess the effectiveness of the notification materials received by the recipients and to improve future communication of risk information, the evaluation instrument proposed was developed.

The NIOSH Institute-wide Worker Notification Program routinely notifies subjects about the results of epidemiologic studies and the implications of the results. The overall purpose of the proposed project is to gain insight into the effectiveness of NIOSH worker notification in order to improve the quality and usefulness of the Institute’s worker notification activities.
