Response: As noted previously, we have revised the number of required outpatient hospital measure information by reducing the required measure set from 10 to 7 measures for initial implementation. For the reporting of quality measures for HOPD affecting CY 2009 payments, data will be required only for the five ED-AMI measures and the two perioperative care measures (PQRI #20 Perioperative Care: Timing of Antibiotic Prophylaxis and PQRI #21 Perioperative Care: Selective of Prophylactic Antibiotic). For reasons discussed above related to hospital burden and refinement of measures for the outpatient setting, data collection on PQRI #5 Heart Failure: Angiotensin Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) for Left Ventricular Systolic Dysfunction (LSVD), PQRI #59: Empiric Antibiotic for Community-Acquired Pneumonia, and PQRI #1: Hemoglobin A1c Poor Control in Type I or II Diabetes Mellitus will not be required in the initial HOP QDRP measure set.

With regard to commenters' requests that we delay the deadline for initial data submission, we agree. Due to the importance of the HOP QDRP and the need for accurate and timely submission of required data, we are revising our proposed submission period and deadline. Rather than requiring initial submission for services furnished on or after January 1, 2008, we are requiring initial submission for services furnished on or after April 1, 2008. The data submission deadline for April to June 2008 discharges is November 1, 2008, 4 months from the last day of the calendar quarter. As proposed, thereafter, participating hospitals would be required to submit quarterly data on finalized measures 4 months from the last day of the calendar quarter for as long as the hospitals participate in the HOP QDRP. As noted, we are statutorily required to establish a program under which hospitals will report data on the quality of hospital outpatient care using standardized measures of care in order to receive the full annual OPPS update effective for payments beginning in CY 2009. In balancing the commenters' concerns and the statutory requirements, we have delayed the initial data submission as much as we believe is possible while still meeting statutory deadline. For the subsequent data submissions for CY 2008 services the submission deadlines will be February 1, 2009 for July to September 2008 services and May 1, 2009 for October to December 2008 services.

Comment: One commenter asked if the quarterly data submission was due November 1, 2009, as stated in the

proposed rule, or if this date should be November 1, 2008.

Response: As stated above, the deadline for submitting data for the initial quarterly data submission of April–June 2008 services will be November 1, 2008.

Comment: One commenter noted that the OPPS appeared to have 1st of the month data submission deadlines, whereas, the inpatient measures have a 15th of the month submission deadline and asked for alignment of the submission deadlines for both.

Response: We understand that there is an interest in alignment to reduce confusion and data submission errors. However, the dates were deliberately chosen and spaced accordingly to avoid issues with concurrent submission of large amounts of data.

Comment: Due to the large volume of outpatient services potentially involved for quality measure reporting, several commenters suggested the use of sampling of cases.

Response: We agree with the idea of sampling of cases for reporting under the HOP QDRP and it is our intent to devise a methodology for determining sample size requirements based on hospital volume as is done for inpatient quality measure reporting.

We are finalizing the proposed data collection and submission requirements with modifications. The initial submission will be for services furnished on or after April 1, 2008. The final submission date for the initial quarterly data for April–June 2008 services is November 1, 2008.

3. HOP QDRP Validation Requirements

In the CY 2008 OPPS/ASC proposed rule, we proposed that data submitted under this program meet validation requirements. The proposed validation requirements were similar to the FY 2006 IPPS RHQDAPU program validation requirement (the initial year validation requirement was added to the IPPS RHQDAPU program) and included independent re-abstraction of medical record data elements by a clinical data abstraction center (CDAC). The CMS contractor would randomly select 5 medical records from all January 2008 discharge cases successfully submitted to the OPPS Clinical Warehouse. The CDAC would mail requests to the hospitals to send the selected medical records to the CDAC within 30 calendar days. The CDAC would independently re-abtract the medical record data elements. We proposed to provide abstraction feedback to all hospitals on abstracted data elements.

We also proposed the following chart audit validation requirements for full CY 2009 payment updates:

- Apply to January 2008 discharges only.
- Require submission of 5 charts sampled from each hospital.
- Establish a passing threshold of 80 percent reliability reflecting the accuracy of submitted data elements used to calculate quality measures.
- Use an upper bound of 95 percent confidence interval to measure accuracy.
- Incorporate clustering of variability at the chart level into the confidence interval.

Validation is intended to provide some assurance of the accuracy of the hospital abstracted data. We have specifically chosen these validation requirements and thresholds to allow this assurance, provide sufficient time to fully process validation data, and minimize the burden on hospitals.

To receive the full OPPS payment rate update in CY 2009, CMS proposed that the hospital must pass our validation requirement of a minimum of 80 percent reliability, based upon our chart-audit validation process, for the January 2008 discharges. The 80-percent reliability threshold is consistent with the IPPS RHQDAPU program validation reliability threshold. Based on our previous IPPS RHQDAPU program experience, we believe that this threshold is reasonable and attainable by the vast majority of hospitals. Several of the measures used in the OPPS HOP QDRP are similar in construction to inpatient measures used in the current IPPS RHQDAPU program. Based on the similar nature of the inpatient and outpatient measure sets, we believe that the 80-percent reliability threshold is applicable in the OPPS HOP QDRP.

We proposed that the data for the first reporting period would be due to the CMS designated contractor by May 31, 2008. We would use confidence intervals, as discussed below, to determine if a hospital has achieved an 80-percent reliability. The use of confidence intervals would allow us to establish an appropriate range below the 80-percent reliability threshold that would demonstrate a sufficient level of reliability to allow the data to still be considered validated. We note that, for both timing and burden reasons, we proposed to apply the validation requirements only to January 2008 discharges for purposes of determining eligibility for the full CY 2009 OPPS payment rate update. However, hospitals would still be required to submit data for subsequent time periods.

We proposed to use January 2008 discharges to estimate the hospitals' validation score for the CY 2009 validation proposed requirement. The timeframe for data collection, abstraction, and validation tasks total about nine to ten months between patient discharges to completion of validation appeals. We believe that using later discharges for the CY 2009 annual payment update would adversely impact CMS' ability to complete these tasks and apply the results to the CY 2009 annual payment update.

Based on our proposed methodology, the confidence interval would be slightly wider than is currently utilized for the IPPS RHQDAPU program due to the smaller sample size. However, given this is the first year of the HOP QDRP, we believe this would be appropriate. We would estimate the percent reliability based upon a review of five charts and then calculate the upper 95 percent confidence limit for that estimate. If this upper limit is above the required 80 percent reliability threshold, the hospital data would be considered validated. We proposed to use the design specific estimate of the variance for the confidence interval calculation, which, in this case, is a single stage cluster sample, with unequal cluster sizes. (For reference, see Cochran, William G. (1977) Sampling Techniques, John Wiley & Sons, New York, chapter 3, section 3.12.) Each sampled medical record is considered as a cluster for variance estimation purposes, as documentation and abstraction errors are believed to be clustered within specific medical records.

Comment: Many commenters asked that validation not be used in determining payment decisions; that is, that receipt of full OPPS payment update be attached only to the submission of quality data, especially for the first year of the program. Commenters urged that for the CY 2009 HOP QDRP, data validation should be conducted only as a learning tool for hospitals.

Response: In response to the many comments received on the validation requirement, acknowledging this is a new data collection effort, and consistent with the initial implementation of the IPPS RHQDAPU program, we have decided not to use the HOP QDRP validation requirement for purposes of the CY 2009 payment update. Thus, there will be no validation requirement for April–June 2008 services for the CY 2009 payment update. However, it is our intent to use

validation requirements for determining the CY 2010 payment update.

Comment: Several commenters addressed the reliability threshold set for validation. Some commenters suggested that reliability thresholds should start at lower levels and gradually be raised to 80 percent.

Response: We understand that there may be difficulties with validation levels due to this being a new data collection effort. As discussed in this final rule with comment period, validation will not be required for payment decisions affecting the CY 2009 payment update. We continue to believe that a reliability threshold of 80 percent for data validation purposes for future years is appropriate, and we intend to use it beginning with the CY 2010 payment update.

Comment: Several commenters expressed concern about validating data from a single month for determining payment. Several commenters stated that at least 6 months of reporting should be required for any measure before any data validation is done or any decisions regarding payment are made.

Response: As noted previously, in response to comments on data volume for determining payment and validation concerns, for purposes of the CY 2009 payment update, we will consider data reported for the second calendar quarter of 2008, April to June 2008 without any validation requirement. It is our intent to use at least 6 months of reported data for the HOP QDRP for purposes of the CY 2010 payment update and for subsequent calendar years. Thus, we intend to begin validation efforts on data submitted from July–September 2008 services forward.

We are revising our validation requirements from our proposal and not requiring validation for purposes of the CY 2009 payment update. We intend to use validation for purposes of the CY 2010 HOP QDRP, beginning with July–September 2008 services and for subsequent services.

In summary, after consideration of the public comments received and as discussed in the above responses to those comments, we are requiring hospitals to meet the below outlined administrative, data collection, and submission requirements under the HOP QDRP for payment determinations affecting the CY 2009 payment update.

1. Administrative Requirements

- Identify a QualityNet Exchange administrator who follows the registration process and submits the information through the CMS-designated contractor. The same person

may be the QualityNet Exchange administrator for both the IPPS RHQDAPU program and the HOP QDRP. This designation must be kept current and must be done, regardless of whether the hospital submits data directly to the CMS designated contractor or uses a vendor for transmission of data.

- Register with the QualityNet Exchange, regardless of the method used for data submission.

- Complete the Notice of Participation form. All hospitals must send the form to a CMS-designated contractor no later than January 31, 2008 for the CY 2009 HOP QDRP. At this time, the participation form for the HOP QDRP is separate from the IPPS RHQDAPU program, and completing a submission form for each program is required. Agreeing to participate includes acknowledging that the data submitted to the CMS-designated contractor will be submitted to CMS and may be shared with a CMS contractor or contractors supporting the implementation of this program.

Hospitals not wishing to participate must submit a Notice of Participation form indicating non-participation in the HOP QDRP. Hospitals that have completed a notice of participation form and subsequently wish to stop participating must submit a withdrawal form. Hospitals not participating in the HOP QDRP program or that withdraw from the program will not receive the full OPPS payment rate update. Instead, in accordance with the law, those hospitals would receive a reduction of 2.0 percentage points in their updates for the affected payment year.

To reduce the burden on hospitals, once a hospital has indicated its intent to participate or not participate, we will consider the hospital to be in that status (either a participant or nonparticipant) until the hospital indicates a change in status by submitting a notice of participation or a withdrawal form.

2. Data Collection and Submission Requirements

- Collect data required for the finalized set of 7 measures outlined below, beginning with the specifications of the finalized set of measures identified in this final rule for payment updates for CY 2009 services and that will be published and maintained in a specifications manual to be found on the Web site at: <http://www.cms.hhs.gov>.

Participating hospitals must collect data on the 7 required measures listed below if they have cases meeting the data collection specifications. Hospitals will be allowed to sample cases and this

sampling scheme will be provided in advance of required data collection.

- ED-AMI-1—Aspirin at Arrival.
- ED-AMI-2—Median Time to Fibrinolysis.

• ED-AMI-3—Fibrinolytic Therapy Received Within 30 Minutes of Arrival.

• ED-AMI-4—Median Time to Electrocardiogram (ECG).

• ED-AMI-5—Median Time to Transfer for Primary PCI.

• PQRI #20 Perioperative Care: Timing of Antibiotic Prophylaxis.

• PQRI #21 Perioperative Care: Selection of Prophylactic Antibiotic.

Providers must collect data for the required finalized set of measures identified in this final rule to receive the full payment update for CY 2009 OPPS services. The measure specifications will be published and maintained in a specifications manual to be found on the CMS Web site at: <http://www.cms.hhs.gov>.

• Submit the data according to a data submission schedule that will be available on the QualityNet Exchange Web site. HOP data will be submitted through the QualityNet Exchange secure Web site (<https://www.qnetexchange.org>). This Web site meets or exceeds all current Health Insurance Portability and Accountability Act requirements. Data for the 7 quality measures finalized in this rule from services occurring during second calendar quarter of 2008 (April–June 2008) are to be collected. The submission deadline for April–June 2008 service data will be November 1, 2008. All submission deadlines will be 4 months after the last day of the calendar quarter. Data must be submitted to the CMS designated contractor using either the CMS Abstraction and Reporting Tool for Outpatient Department measures (CART-OPD) or another third-party vendor that has a tool which has met the measure specification requirements for data transmission to the QualityNet Exchange.

Hospitals must submit quality data through the CMS contractor's secure Web site. Detailed information about the Web site for submitting quality measure data under the HOP QDRP is not available as of the publication of this final rule with comment period. We anticipate awarding the contract to design and manage the OPPS Clinical Warehouse in the near future. We expect the CMS contractor's Web site to meet or exceed all current Health Insurance Portability and Accountability Act requirements for security of personal health information.

The OPPS Clinical Warehouse will submit the data to CMS on behalf of the

hospitals. It is possible that the information in the OPPS Clinical Warehouse may be considered QIO information. If so, it may be subject to the stringent QIO confidentiality regulations in 42 CFR part 480.

Hospitals are expected to submit data under the HOP QDRP on outpatient episodes of care to which the required measures apply. For the purposes of the HOP QDRP, an outpatient episode of care is defined as care provided to a patient who has not been admitted as an inpatient but who is registered on the hospital's medical records as an outpatient and receives services (rather than supplies alone) directly from the hospital. Every effort will be made to assure that data elements common to both inpatient and outpatient settings are defined consistently (such as "time of arrival"). However, HOP QDRP quality data, not quality data required to be submitted for a patient treated under the IPPS RHQDAPU program, would be submitted under the HOP QDRP.

To be accepted by the CMS designated contractor, submissions must be, at a minimum, accurate, timely, and complete. Data are considered to have been "accepted" by the CMS designated contractor, for purposes of determining eligibility for the full payment rate update, only when data are submitted prior to the reporting deadline and after they have passed all CMS designated contractor edits.

In addition to collecting and submitting data as noted above, to be eligible for the full OPPS payment update in CY 2009 and subsequent years, hospitals must also:

- Submit complete and accurate data. A "complete" submission is determined based on sampling criteria that will be published and maintained in a specifications manual to be found on the Web site at <http://www.qualitynet.org>, and must correspond to both the aggregate number of cases submitted by a hospital and the number of Medicare claims it submits for payment. To be considered "accurate," submissions must pass validation. As stated previously in this section, we are revising our validation requirement from the proposed rule for purposes of the CY 2009 payment update. Thus, there is no validation requirement for the initial reporting period (April to June 2008) affecting the CY 2009 payment update. It is our intention that there will be validation requirements under the HOP QDRP as outlined in this section for reporting periods beginning July–September 2008 services forward that will be considered for payment decisions beginning with the CY 2010 payment update.

- Submit the aggregate numbers of outpatient episodes of care which were eligible for submission under the HOP QDRP beginning with the first reporting period (April–June 2008) forward. These numbers would indicate the number of outpatient episodes of care in the universe to which sampling criteria are applied.

New hospitals are expected to begin reporting data as soon as possible, but no later than beginning with services provided the first day of the calendar quarter immediately following a hospital's receipt of its Medicare provider number and the hospital's timely completion of the administrative requirements for participating in the HOP QDRP.

Hospitals must submit data under the HOP QDRP on outpatient episodes of care to which the required measures apply. Data submission deadlines for the submission of this data will be the same as for submission of quality measure data, will begin with the submission of April–June 2008 services forward, and will be due 4 months from the last day of the calendar quarter. For the purposes of the HOP QDRP, an outpatient episode of care is defined as care provided to a patient who has not been admitted as an inpatient but who is registered on the hospital's medical records as an outpatient and receives services (rather than supplies alone) directly from the hospital.

3. HOP QDRP Validation Requirements

As discussed above, we are not implementing a data validation requirement for data submitted for the April–June 2008 time period for the purposes of the CY 2009 annual payment update. It is our intention that there will be validation requirements as discussed previously and outlined below for data submitted for July 2008 services forward to affect payment determinations for CY 2010 and subsequent calendar years. The validation requirements include independent reabstraction of medical data elements by a clinical data abstraction center (CDAC). The CMS contractor will randomly select 5 cases from all cases successfully submitted to the OPPS Clinical Warehouse for any relevant time period. The CDAC will mail requests to the hospitals to send the selected medical records or other supporting documentation to the CDAC within 30 calendar days. The CDAC will independently reabstract the medical record data elements. Abstraction feedback will be provided to all hospitals on abstracted data elements.

At this time, the following audit validation requirements are intended to

apply for full CY 2010 payment updates forward:

- A time period of services after the initial April to June 2008 time period will be determined. At this time, we intend to use data from July 2008 services forward for the HOP QDRP for the CY 2010 payment update.
- Submission of supporting documentation for 5 selected cases sampled from each hospital is required.
- A passing threshold of 80 percent reliability reflecting the accuracy of submitted data elements is set to calculate quality measures.
- An upper bound of 95 percent confidence interval to measure accuracy is set.
- Clustering of variability at the chart level will be incorporated into the confidence interval.

To receive the full OPPS payment rate update, the hospital must pass our validation requirement of a minimum of 80 percent reliability, based upon our audit validation process, for the designated time periods.

The methodology to be used for calculating the confidence intervals under the HOP QDRP is that currently utilized for the IPPS RHQDAPU program. Due to the small sample sizes during CY 2010 (as noted above, data from only 5 cases will be used), we anticipate that the calculated confidence intervals will be larger. However, as CY 2010 is only the second year of the HOP QDRP, we view this as appropriate. We anticipate estimating the percent reliability based upon a review of 5 documentation audits and then calculating the upper 95 percent confidence limit for that estimate. If that upper limit is above the required 80 percent reliability threshold, we anticipate considering the hospital's data valid for payment update purposes for CY 2010 forward. As proposed, we intend to use the design specific estimate of the variance for the confidence interval calculation, which, in this case, is a single stage cluster sample, with unequal cluster sizes. (For reference, see Cochran, William G. (1977) Sampling Techniques, John Wiley & Sons, New York, chapter 3, section 3.12.) Each sampled medical record is considered as a cluster for variance estimation purposes, as documentation and abstraction errors are believed to be clustered within specific medical records.

F. Publication of HOP QDRP Data Collected

New section 1833(t)(17)(E) of the Act requires that the Secretary establish procedures to make data collected under this program available to the public and

to report the quality measures on the CMS Web site. Our intent is to make this information public in CY 2009 by posting it on the CMS Web site. Participating hospitals will be granted the opportunity to preview this information prior to its public posting as we have recorded it.

Comment: Several commenters provided thoughts on the publication of quality data collected. The commenters believed that consumers should be able to access quality data and cost information electronically that is organized to allow comparison of information that is correct, current, and clear. They suggested that the information be presented on all available sites of service so consumers can compare a hospital outpatient department with an ASC for a procedure that can be performed in both settings. They also suggested that there be a provider narrative section to address information regarding reliability or accuracy, and provider-specific information such as accreditation status.

Response: We thank the commenters for their support of providing public access to hospital outpatient quality data. We strive to present information contained on Web sites in as complete and clear manner possible. We also thank the commenters for their thoughts on additional information that could be included that would aid consumers in assessing a provider's quality measure data.

After consideration of the public comments received and as discussed in the above responses to those comments, we intend that information collected under the HOP QDRP will be made public in CY 2009 by posting it on the CMS Web site. Information from non-validated data, including the initial reporting period (April–June 2008) will not be posted. Participating hospitals will be granted the opportunity to preview this information prior to its public posting as we have recorded it.

G. Attestation Requirement for Future Payment Years

CMS also solicited comments on whether to implement an HOP QDRP attestation requirement in CY 2010 and subsequent payment years similar to the proposed attestation requirement in the IPPS RHQDAPU program set out in the FY 2008 IPPS proposed rule (72 FR 24808). Hospitals would be required to submit a written form to a CMS contractor indicating that they formally attest to the accuracy and completeness of their data, including the volume of data submitted to the OPPS Data Warehouse. We anticipated that the attestation form submission deadlines

would parallel the HOP QDRP periodic data submission deadlines.

Comment: One commenter stated that an attestation statement would be acceptable as long as providers have sufficient time to review and verify that data were submitted accurately. No comments against the requirement of an attestation statement were received.

Response: Under any attestation procedure we implement, providers would have time to review and verify that data were submitted accurately.

In light of the public comments received we intend that an attestation procedure similar to the attestation requirement utilized in the IPPS RHQDAPU program will be included in the HOP QDRP for CY 2010 and subsequent payment years.

H. HOP QDRP Reconsiderations

When the IPPS RHQDAPU program was initially implemented, it did not include a reconsideration submission process for hospitals. Subsequently, we received many requests for reconsideration of those payment decisions, and as a result identified a process by which participating hospitals would submit requests for reconsideration. We anticipate similar concerns with the HOP QDRP and, therefore, in the CY 2008 OPPS/ASC proposed rule (72 FR 42805) we proposed to establish a reconsideration process for the HOP QDRP for those hospitals that fail to meet the CY 2009 HOP QDRP requirements with the procedural details of that process posted to the QualityNet Exchange Web site, <https://www.qnetexchange.org>. In the CY 2008 OPPS/ASC proposed rule (72 FR 42805), we sought public comment specifically on the need for a structured reconsideration process for CY 2009 and subsequent calendar years. We also requested comment on what such a process should entail. For example, such a process, if established, could include—

- A limited time, such as 30 days from the public release of the decision, for requesting a reconsideration;
- Specific individuals or functions in a hospital organization that can request such a reconsideration and that would be notified of its outcome;
- The specific factors that CMS will consider in such a reconsideration, such as an inability to submit data timely due to CMS systems failures;
- Specific requirements for submitting a reconsideration request, such as a written request for reconsideration specifically stating all reasons and factors why the hospital believes it did meet the HOP QDRP program requirements;

- Suggestions regarding the type of entity that should conduct the reconsideration process; and
- The timeframe, such as 60 days, for CMS to provide its reconsideration decision to the hospital.

We also requested comments on the reasons for not establishing such a reconsideration process. We indicated that we planned to establish procedures that are as similar as possible to those used by the IPPS RHQDAPU program should we finalize our proposal to implement a reconsideration process for HOP QDRP.

Comment: While we did not receive any comments opposing a reconsideration process, two commenters suggested that the reconsideration process be straightforward, transparent, and timely. One commenter requested that clear guidance on how to submit appeals be provided, and that any appeals be expedited. One commenter stated that it was important to have a reconsideration process in the case of disputes regarding submitted data. One commenter supported having a reconsideration process similar to the one used under the inpatient quality measure reporting program.

Response: We thank the commenters for voicing their support for a reconsideration process. CMS always strives to implement processes that are straightforward, transparent, and timely and fully intend to provide guidance on any reconsideration process used for outpatient hospital data. It is our intent to model a reconsideration process for the HOP QDRP similar to the one used under the inpatient quality measure reporting program.

Comment: Several commenters stated there should be an expeditious mechanism for corrections or resolution of disagreements about any information posted for public presentation.

Response: We intend that any process put in place for corrections or resolution of disagreements about any information posted for public presentation will be as expeditious as possible.

After consideration of the public comments received and as discussed in the above responses to those comments, we intend that a reconsideration process modeled after that for reporting inpatient quality measures will be included in the HOP QDRP for CY 2009 and subsequent calendar years.

I. Reporting of ASC Quality Data

As discussed in section XVII.A.2. of this final rule with comment period, section 109(b) of the MIEA-TRHCA (Pub. L. 109-432) amended section 1833(i) of the Act by redesignating

clause (iv) as clause (v), adding new section 1833(i)(2)(D)(iv), and adding new section 1833(i)(7) to the Act. These amendments authorize the Secretary to require ASCs to submit data on quality measures and to reduce the annual increase in a year by 2.0 percentage points for ASCs that fail to do so. These provisions permit, but do not require, the Secretary to require ASCs to submit such data and to reduce any annual increase for non-compliant ASCs.

In the CY 2008 OPPS/ASC proposed rule, we did not propose to introduce quality measures for reporting in ASCs for CY 2008 as we did for the OPPS as described in sections XVII.B. through H. of the proposed rule. We believe that promoting high quality care in the ASC setting through quality reporting is highly desirable and fully in line with our efforts under other payment systems. However, we also believe that the transition to the revised ASC payment system in CY 2008 poses such a significant challenge to ASCs that it would be most appropriate to allow some experience with the revised payment system before introducing other new requirements.

Implementation of quality reporting at this time would require systems changes and other accommodations by ASCs, facilities which do not have prior experience with quality reporting as hospitals already have for inpatient quality measures, at a time when they are implementing a significantly revised payment system. We believe that our CY 2008 proposal to implement quality reporting for HOPDs prior to establishing quality reporting for ASCs would allow time for ASCs to adjust to the changes in payment and case-mix that are anticipated under the revised payment system. We would also gain experience with quality measurement in the ambulatory setting in order to identify the most appropriate measures for quality reporting in ASCs prior to the introduction of the requirement in ASCs. We intend to implement the provisions of section 109(b) of the MIEA-TRHCA, Pub. L. 109-432, in a future rulemaking.

Comment: Several commenters agreed with our decisions to delay implementation of quality measures for ASCs. However, one commenter urged CMS to implement a quality reporting system for ASCs as soon as possible as all providers that perform the same services should be held to the same accountability standards with respect to the quality of the care they deliver. There were no other comments in disagreement with the planned delay.

Response: We appreciate these commenters' support for our decision to

delay implementation of collection of ASC quality measure data. We also recognize the necessity of equal accountability for providers of the same services and appreciate this reminder.

Comment: Several commenters stated that an administrative claims-based quality measure reporting system should be implemented for ASCs, similar to that in place for physician reporting. Commenters suggested that a claims-based system would reduce the financial and administrative burden for these smaller facilities that more resemble physician offices than hospitals, noting that ASCs will continue submitting Medicare claims using the CMS 1500 form as do physicians at least through 2008, providing ASCs the ability to report data in the same manner as physicians. One commenter suggested CMS work with ASC leaders to develop HCPCS level II G codes that would allow facility-level quality measures to be reported using an administrative claims-based approach.

Response: We thank the commenters for their suggestions for our consideration in implementing a quality measure program for ASCs.

Comment: Several commenters stated that CMS should consider the use of five ASC measures currently under development if the five were NQF-endorsed. These five measures focus on patient falls, patient burns, hospital transfer/admission, wrong site/patient/procedure/implant situations, and prophylactic antibiotic timing similar to PQRI #20 and #21.

Response: We thank the commenters for supplying this information for our consideration in developing quality measures for ASCs.

After consideration of the public comments received, and as discussed in the above responses to those comments, we are finalizing to our decision to delay implementation of ASC quality measure reporting. We expect to implement the provisions of section 109(b) of the MIEA-TRHCA, Pub. L. 109-432, in a future rulemaking.

J. FY 2009 IPPS Quality Measures Under the RHQDAPU Program

As stated in FY 2008 IPPS proposed rule (72 FR 24805), we proposed to add 1 outcome measure and 4 process measures to the existing 27 measure set to establish a new set of 32 quality measures to be used under the RHQDAPU program for the FY 2009 IPPS annual payment determination. We proposed to add the following five measures for the FY 2009 IPPS annual payment determination:

- PNE 30-day mortality measure (Medicare patients)

- SCIP Infection 4: Cardiac Surgery Patients With Controlled 6AM Postoperative Serum Glucose
- SCIP Infection 6: Surgery Patients With Appropriate Hair Removal
- SCIP Infection 7: Colorectal Patients With Immediate Postoperative Normothermia

- SCIP Cardiovascular 2: Surgery Patients on a Beta-Blocker Prior to Arrival Who Received a Beta-blocker During the Perioperative Period

We stated that we planned to formally adopt these measures a year in advance in order to provide time for hospitals to prepare for changes related to the RHQDAPU program. We also stated that we anticipated that the proposed measures would be endorsed by the NQF. Finally, we stated that any proposed measure that was not endorsed by the NQF by the time that we published the FY 2008 IPPS final

rule would not be finalized in that final rule.

At the time we published the FY 2008 IPPS final rule, only the PNE 30-day mortality measure had been endorsed by the NQF. Therefore, we finalized only that measure as part of the FY 2009 IPPS measure set and stated that we would further address adding additional measures in the CY 2008 OPPS final rule (that is, this CY 2008 OPPS/ASC final rule with comment period) and, if necessary, in the FY 2009 IPPS proposed and final rules. We also responded to comments we had received on the 5 proposed measures. (72 FR 47348 through 47351)

The NQF has endorsed the following additional process measures that we proposed to include in the FY 2009 RHQDAPU measure set:

- SCIP Infection 4: Cardiac Surgery Patients With Controlled 6AM Postoperative Serum Glucose

- SCIP Infection 6: Surgery Patients With Appropriate Hair Removal

As we stated in the FY 2008 IPPS proposed rule (72 FR 24805), these measures reflect our continuing commitment to quality improvement in both clinical care and quality, and they demonstrate our commitment to include in the RHQDAPU program only those quality measures that reflect consensus among affected parties and that have been reviewed by a consensus building process. Because these measures are now endorsed by the NQF, we are finalizing them for the FY 2009 measure set, bringing the total number of measures in that measure set to 30.

The measure set to be used for FY 2009 annual payment determination is as follows:

| Topic | Quality measure |
|--|---|
| Heart Attack (Acute Myocardial Infarction) | <ul style="list-style-type: none"> • Aspirin at arrival.* • Aspirin prescribed at discharge.* • ACE inhibitor (ACE-I) or Angiotensin Receptor Blocker (ARBs) for left ventricular systolic dysfunction.* • Beta blocker at arrival.* • Beta blocker prescribed at discharge.* • Fibrinolytic (thrombolytic) agent received within 30 minutes of hospital arrival.** • Primary Percutaneous Coronary Intervention (PCI) received within 120 minutes of hospital arrival.** • Adult smoking cessation advice/counseling.** |
| Heart Failure (HF) | <ul style="list-style-type: none"> • Left ventricular function assessment.* • ACE inhibitor (ACE-I) or Angiotensin Receptor Blocker (ARBs) for left ventricular systolic dysfunction.* • Discharge instructions.** • Adult smoking cessation advice/counseling.** |
| Pneumonia (PNE) | <ul style="list-style-type: none"> • Initial antibiotic received within 4 hours of hospital arrival.* • Oxygenation assessment.* • Pneumococcal vaccination status.* • Blood culture performed before first antibiotic received in hospital.** • Adult smoking cessation advice/counseling.** • Appropriate initial antibiotic selection.** • Influenza vaccination status.** |
| Surgical Care Improvement Project (SCIP) named SIP for discharges prior to July 2006 (3Q06). | <ul style="list-style-type: none"> • Prophylactic antibiotic received within 1 hour prior to surgical incision.** • Prophylactic antibiotics discontinued within 24 hours after surgery end time.** • SCIP-VTE 1: Venous thromboembolism (VTE) prophylaxis ordered for surgery patients.*** • SCIP-VTE 2: VTE prophylaxis within 24 hours pre/post surgery.*** • SCIP-Infection 2: Prophylactic antibiotic selection for surgical patients.*** • SCIP-Infection 4: Cardiac Surgery Patients with Controlled 6AM Postoperative Serum Glucose.***** • SCIP-Infection 6: Surgery Patients with Appropriate Hair Removal.***** |
| Mortality Measures (Medicare patients) | <ul style="list-style-type: none"> • Acute Myocardial Infarction 30-day mortality Medicare patients.*** • Heart Failure 30-day mortality Medicare patients.*** • Pneumonia 30-day mortality Medicare patients.**** |
| Patients' Experience of Care | <ul style="list-style-type: none"> • HCAHPS patient survey.*** |

* Measure included in 10 measure starter set.

** Measure included in 21 measure expanded set.

*** Measure added in CY 2007 OPPS final rule.

**** Measure added in FY 2008 IPPS final rule.

***** Measure added in CY 2008 OPPS final rule.

We also stated in the FY 2008 final rule that the RHQDAPU participation requirements for the FY 2009 program would apply to additional measures we adopt for that year's program (72 FR 47361).

Therefore, hospitals must start submitting data for SCIP Infection 4 and SCIP Infection 6 starting with first quarter calendar year 2008 discharges and subsequent quarters until further notice, and hospitals must submit their aggregate population and sample size counts for Medicare and non-Medicare patients. These requirements are consistent with the requirements for the other 24 AMI, HF, PN, and SCIP process measures included in the FY 2009 measure set. The complete list of procedures for participating in the RHQDAPU program for FY 2009 is provided in the FY 2008 final rule (72 FR 47359–47361).

We plan to propose in the FY 2009 IPPS proposed rule that we will add these two measures to the current 24 process measures included in the RHQDAPU chart audit validation requirement starting with first quarter 2008 calendar year discharges. These validation results would be included as part of a RHQDAPU FY 2010 chart validation requirement if they are finalized in the FY 2009 IPPS final rule. We are announcing our intention to make this proposal to provide hospitals with sufficient advance notice when abstracting and submitting these measures to CMS.

Since SCIP Cardiovascular 2 is not currently endorsed by the NQF, CMS will not adopt this measure as part of the official FY 2009 IPPS measure set for annual payment determination at this time. In addition, as stated in the FY 2008 IPPS final rule, CMS is not adopting the SCIP Infection 7 measure as part of the FY 2009 IPPS measure set for annual payment determination at this time.

XVIII. Changes Affecting Critical Access Hospitals (CAHs) and Hospital Conditions of Participation (CoPs)

A. Changes Affecting CAHs

1. Background

CAHs are subject to different participation requirements than are hospitals. Among other requirements, a CAH must be located in a rural area (or an area treated as rural) and, under section 1820(c)(2)(B)(i)(I) of the Act and § 485.610(c) of our regulations, must meet an additional distance-related location requirement. Under this requirement, a CAH must be located at least 35-miles (or, in the case of mountainous terrain or in areas with

only secondary roads, 15-miles) from the nearest hospital or other CAH. In addition, CAHs receive payment for services furnished to Medicare beneficiaries differently. CAHs receive cost-based payment for 101 percent of their reasonable costs.

Prior to January 1, 2006, the CAH minimum distance eligibility requirement was not applicable to entities States had certified as necessary provider CAHs. Approximately 850 current CAHs have been designated by their States as necessary providers. The criteria used to qualify a CAH as a necessary provider were established by each State in its Medicare Rural Hospital Flexibility Program (MRHFP). The State's MRHFP rural health care plan contains the necessary assurances that the plan was developed to further the goals of the statute and regulations to ensure access to essential health care services for rural residents. States, in consultation with their hospital associations and Offices of Rural Health, have defined those CAHs that provide necessary services to a particular patient community in the event that the facility did not meet the required 35-mile (or, in the case of mountainous terrain or in areas with only secondary roads, 15-mile) distance requirement from the nearest hospital or CAH. Each State's criteria are different, but the criteria share certain similarities and all define a necessary provider related to the facility location.

However, section 405(h)(1) of Public Law 108–173 amended section 1820(c)(2)(B)(i)(II) of the Act by adding language that ended States' authority to certify a CAH as a necessary provider, effective January 1, 2006. In addition, section 405(h)(2) of Public Law 108–173 amended section 1820(h) of the Act to include a grandfathering provision for CAHs that were certified as necessary providers prior to January 1, 2006. We incorporated these amendments in § 485.610(c) of our regulations in the FY 2005 IPPS final rule (69 FR 49220). Because those regulations did not address the situation where the grandfathered CAH is no longer the same facility due to relocation, in the FY 2006 IPPS final rule (70 FR 47490), we amended § 485.610 of our regulations to add a new § 485.610(d) that addressed the relocation criteria a necessary provider CAH has to meet to retain its necessary provider designation.

Additional circumstances concerning CAHs with existing necessary provider designations have come to our attention that we believe also need to be addressed. Specifically, we have learned that some CAHs with grandfathered

necessary provider designations are co-located with other hospitals, which typically are PPS-excluded inpatient psychiatric facilities or inpatient rehabilitation facilities. We are also aware that there is interest in the creation or acquisition by CAHs with necessary provider designation of off-campus facilities that they do not believe would be subject to CAH location requirements.

For the reasons noted below, in the CY 2008 OPPI/ASC proposed rule (72 FR 42806), we took a proactive approach by proposing a change in the regulation to be consistent with our belief that the intent of the CAH program is to maintain hospital level services in rural communities while ensuring access to care. We believe that this proposed change to the regulations will help to maintain the integrity of the MRHFP within the statutory requirements.

2. Co-location of Necessary Provider CAHs

Some necessary provider CAHs are co-located with other hospitals, particularly specialty psychiatric and/or rehabilitation hospitals. Prior to the enactment of section 405(g) of Public Law 108–173, it is understandable that a State MRHFP might have allowed co-location of a CAH with a necessary provider designation with the specialized services of a psychiatric and/or an inpatient rehabilitation hospital. The State may have believed that beneficiary access to care would be enhanced through the provision of both CAH and these specialized services at the same location, and the CAH itself might have had difficulty in providing such services within its permitted bed limits. However, section 405 of Public Law 108–173 included several provisions that permit CAHs themselves to address such access to care issues.

Specifically, section 405(e) of Public Law 108–173 amended sections 1820(c)(2)(B)(iii) and 1820(f) of the Act to increase the permitted number of CAH inpatient beds from 15 to 25. In addition, section 405(g) of Public Law 108–173 added section 1820(c)(2)(E) to the Act, which permits a CAH to operate distinct part inpatient psychiatric and/or rehabilitation units, each subject to a 10-bed limit that is not included as part of the CAH's 25-bed limit. Therefore, a CAH can operate a 45-bed facility addressing a wide range of needs in the rural community it serves. We believe that CAHs seeking to provide access to specialized services should avail themselves of the statutory provisions governing distinct part units in CAHs rather than making arrangements with

other hospital providers to share space at the CAH location.

In light of these changes to the statute, we proposed to no longer allow a necessary provider CAH to enter into co-location arrangements between CAHs and hospitals, unless such arrangements were in effect before January 1, 2008, and the type and scope of services offered by the facility co-located with the necessary provider CAH do not change.

Currently, co-location arrangements seem to involve psychiatric or rehabilitation hospitals. However, we are concerned that, without this change, there may be situations where more necessary provider CAHs will co-locate with PPS hospitals. We also cannot rule out a scenario where two necessary provider CAHs could co-locate after relocation. We believe the co location of a necessary provider CAH with another hospital or necessary provider CAH is not consistent with the CAH statutory framework that establishes requirements for a CAH to be a certain minimum distance from other hospitals or CAHs. We believe that the elimination of States' authority to designate necessary provider CAHs and the new authority for CAHs to operate psychiatric and rehabilitation units in addition to their expanded ceiling for inpatient beds should provide sufficient flexibility for necessary provider CAHs to operate within the statutory framework without engaging in additional arrangements.

We also proposed to clarify that, under certain circumstances, a change of ownership of any of the facilities (either the CAH or the existing co-located facility) with a co-location arrangement that was in effect before January 1, 2008, will not be considered to be a new co-location arrangement. If a change of ownership should occur in a CAH with a grandfathered co-location arrangement on or after January 1, 2008, the provider agreement will be assigned to the new owner unless the new owner rejects assignment of the provider agreement. Grandfathered necessary provider CAH status, including grandfathered co-location arrangements, would not transfer to a new CAH owner who does not assume the provider agreement from the previous owner. To obtain CAH designation, the new provider would have to comply with all the CAH designation requirements, including the location requirements relative to other providers, that is, more than a 35-mile drive (or 15 miles in areas of mountainous terrain or secondary roads).

3. CAH Provider-Based Facilities

We have consistently taken the position that the intent of the CAH program is to keep hospital-level services in rural communities, thereby ensuring access to care (FY 2006 IPPS final rule (70 FR 47469)). A CAH is permitted to create or acquire an off-campus location, including a distinct part unit that satisfies the location criteria for a CAH and operates under the CAH's provider agreement under the provider-based regulations at 42 CFR 413.65. We note that, under section 1820(c)(2)(B)(i)(II) of the Act, a CAH does not have to meet the distance requirements relative to other hospitals or CAHs if it was certified as a necessary provider by the State prior to January 1, 2006. We stated in the FY 2006 IPPS final rule (70 FR 47472), when addressing the relocation criteria for a necessary provider CAH, that the "necessary provider" designation is specific to the physical location(s) of the CAH in existence at the time of the designation. We believe the necessary provider CAH designation cannot be considered to extend to any new facilities not in existence when the CAH received its original necessary provider designation. Accordingly, we believe the creation of any new location that would cause any part of the CAH to be situated at a location not in compliance with the distance requirements at 42 CFR 485.610 would cause the entire CAH to violate the distance requirements.

Of the approximately 1,300 CAHs, 453 CAHs have health clinics, 81 have psychiatric units, and 20 have rehabilitation units. We do not know how many of the existing clinics and distinct part units are at off-site locations. However, we are concerned with CAHs creating or acquiring off-campus locations, including distinct part psychiatric and rehabilitation units, that do not comply with the CAH location requirement relative to other facilities. Therefore, when such off-campus facilities are created by a CAH with a necessary provider designation, there is no reason to assume that the distance exemption given to the CAH should be extended without qualification to any location for that CAH's off-campus facilities. Accordingly, any CAH off-campus locations must satisfy the current statutory CAH distance requirements, without exception, regardless of whether the main provider CAH is a necessary provider CAH.

Therefore, in the CY 2008 OPPTS/ASC proposed rule (72 FR 42807), we proposed to clarify that if a necessary

provider CAH, or a CAH that does not have a necessary provider designation, operates a provider-based facility as defined in § 413.65(a)(2), or a psychiatric or rehabilitation distinct part unit as defined in § 485.647 that was created or acquired on or after January 1, 2008, it must comply with the distance requirement of a 35-mile drive to the nearest hospital or CAH (or 15 miles in the case of mountainous terrain or in areas with only secondary roads). (In the proposed § 485.610(e)(2), we inadvertently used the phrase "after January 1, 2008" instead of "on or after January 1, 2008." We have corrected this language in this final rule with comment period. We also included the words "off-campus" before the words "provider-based locations" in the same regulation to conform to the references in the section for off campus location.)

4. Termination of Provider Agreement

In the event that a CAH with a necessary provider designation enters into a co location arrangement on or after January 1, 2008, or acquires or creates an off-campus facility on or after January 1, 2008, that does not satisfy the CAH distance requirements in § 485.610(c), we proposed that we would terminate that CAH's provider agreement, in accordance with the provisions of § 489.53(a)(3). (In proposed § 485.610(e)(3), we inadvertently used the phrase "after January 1, 2008" instead of "on or after January 1, 2008." We have corrected this language in this final rule with comment period.) The necessary provider CAH could avoid termination by converting to a hospital that is paid under the IPPS, assuming that the facility satisfies all requirements for participation as a hospital in the Medicare program under the provisions in 42 CFR Part 482. We also noted that if the necessary provider CAH corrects the situation that led to the noncompliance, a termination action will not be triggered. A CAH that is not a necessary provider CAH could not have a co-location situation due to the distance requirements it is required to meet at § 485.610(c).

5. Regulation Changes

In the CY 2008 OPPTS/ASC proposed rule (72 FR 42807), we proposed to amend § 485.610 by adding a new paragraph (e) to address situations under our proposal relating to off-campus and co-location requirements for all CAHs (including CAHs with necessary provider designations).

Comment: Several commenters stated that while it is a good policy to eliminate future co-location

arrangements between CAHs and acute care hospitals, they do not believe it is a good policy to eliminate relationships between CAHs and other hospitals in opening psychiatric or rehabilitation services. They indicated that such a policy change would only limit access to care without providing cost savings or improving efficiency. The commenters stated that co-locating with other providers would lead to cost-effective high quality delivery of health care services to Medicare beneficiaries and others who need the services. Another commenter stated that CMS provided no basis for this proposal in the background material to the proposed rule.

Response: We disagree with the comment that we did not provide a basis for the proposed requirements. Additionally, we are not seeking to eliminate Medicare beneficiary access to inpatient psychiatric and rehabilitation services specifically, or access to any type of care in general. As we explained in the preamble to the proposed rule, we proposed the revisions to § 485.610 in light of recent changes to the statute. These statutory changes allow for: (1) An increase in the number of CAH inpatient beds from 15 to 25; and (2) a CAH to operate distinct part inpatient psychiatric and/or rehabilitation units, each with a 10-bed limit that is not included as part of the CAH's 25-bed limit. By allowing a CAH to operate a 45-bed facility, these amendments to the statute permit CAHs themselves to address the access to care issues mentioned by the commenters.

These statutory provisions clearly provide an opportunity for the CAH to directly meet the wide range of needs in the rural community it serves. However, co-location arrangements between CAHs and hospitals that were in effect before January 1, 2008 would still be permitted, provided that there is no change in the type and scope of services offered by the facility co-located with the necessary provider CAH.

Comment: One commenter expressed complete support for the proposal, and saw it as a clarification of existing policy. The commenter stated that a CAH provider-based clinic was built across the street from its outpatient clinic to increase market share as its population was dwindling. The commenter stated that CAHs were financed and designed to serve the needs of the underserved, not to compete in the market against not-for-profit hospitals that are not subsidized like CAHs. The commenter also stated that since the regulation is a clarification and is not new, the existing

provider-based clinics should not be grandfathered.

Another commenter stated that it valued the cost-based financial support that CMS extends to CAHs. The commenter supported CMS' proposed rule and viewed the proposed policy changes as a step towards restoring the "intended spirit" of the CAH designation.

Response: We appreciate the commenters' support. However, we disagree with the comment that existing provider-based clinics should not be grandfathered. The current regulations did not explicitly address the issue of necessary provider CAHs from acquiring or creating off-campus facilities that do not meet the minimum distance requirements. However, our policy has been that CAHs are required to meet the distance requirement, including any off-campus facilities. In light of the statutory change to the designations for necessary provider CAHs, we believe that it is necessary to grandfather existing provider-based clinics.

Comment: Numerous commenters requested that rural health clinics (RHCs) be excluded from the category of provider-based entities that must comply with the proposed change. Some commenters stated that operating an RHC is the only way to provide healthcare to the medically underserved population in their service area. One commenter stated that if CMS does not exempt RHCs from the proposed policy, CMS should allow grandfathered CAH/provider-based RHCs to move the location of the RHC without jeopardizing the CAH status of the parent provider.

Response: To be certified as an RHC, the clinic must be located in an area designated, either by population or geographic area or location, as a Medically Underserved Area (MUA) or Health Professional Shortage Area (HPSA). In addition, State governors are allowed to designate areas with a shortage of professional health services through the use of statewide shortage designation plans approved by HRSA's Bureau of Health Professions. Because RHCs have their own location requirements and because, unlike other provider-based clinics, a provider-based RHC is a separate entity which undergoes a separate certification process and has a unique provider identification number from the base provider, we believe that our concerns leading to our provider based proposal do not apply to CAH provider-based RHCs. Accordingly, in this final rule with comment period, we are excluding RHCs from the list of provider-based

facilities at § 413.65(a)(2) that must comply with this requirement.

Comment: One commenter stated that for any CAH that is landlocked against future growth, this proposed change would severely restrict the CAH's ability to provide the quality services required by the community. At the very least, the commenter urged that CMS increase the current on-campus yards from 250 yards to 500 or 750 yards. Another commenter stated that it is reasonable that CAHs are prohibited from creating new services that are close to competing organizations, but believed that limiting all off-campus services to only those in place by the end of the year, would freeze the CAH into an increasingly out-of-date delivery modality.

Response: We acknowledge the CAH's constraints of having to locate a provider-based clinic on its campus. However, this rule will not restrict a CAH from building or obtaining an off-site provider-based clinic on or after January 1, 2008. The CAH can have a provider-based clinic that complies with the provider-based rules in § 413.65. In addition, the off-site clinic must be located more than a 35-mile (or 15-mile) drive from another CAH or hospital. For example, the CAH could have a provider-based clinic located 2 miles or 10 miles from the provider CAH, providing the clinic complies with the distance requirements and is 35 (or 15) miles away from another CAH or hospital. The regional offices will evaluate these issues on a case-by-case basis, consistent with all existing regulations. Also, as discussed above, because we are now excluding RHCs from these CAH provider-based requirements, a CAH would have even more flexibility in choosing the location of its provider-based RHC.

Comment: Several commenters stated that they have started plans (and, in some cases, construction) for a new provider-based facility that will not be completed by January 1, 2008. They have requested an exemption to be able to move forward with their plans that were initiated prior to the publication of the proposed rule.

Response: We recognize that a number of CAHs have plans underway to build or acquire provider-based facilities that will not be completed before January 1, 2008. For those CAHs that demonstrate that they have begun such planning and/or construction, our regional offices will evaluate those issues on a case-by-case basis. A demonstration that construction plans were "under development" prior to January 1, 2008 could include supporting documentation such as the drafting of architectural specifications,

the letting of bids for construction, the purchase of land and building supplies, documented efforts to secure financing for construction, expenditure of funds for construction, and compliance with State requirements for construction such as zoning requirements, application for a certificate of need, and architectural review. However, we recognize that it may not have been feasible for a CAH to have completed all of these activities noted above as examples prior to January 1, 2008. Thus, we expect the CMS Regional Offices to consider all of the factors involved in each CAH's plan and make case by case determinations of whether a CAH can continue its plans to acquire or construct an off-campus provider-based clinic. We note that we have also used the above documentation guidelines in Publication 100–20 for grandfathered specialty hospitals to determine if construction plans were “under development.”

Comment: Many commenters stated that CMS should not adopt the provisions in the proposed rule because limiting off-site clinics would impede the provision of health care in their surrounding communities due to the fact that it could not be provided without cost-based reimbursements. Also, the commenters suggested that as physicians cannot be paid competitively without cost-based reimbursement, this would further compound the difficulties in recruiting healthcare providers to work in rural areas. Other commenters stated that the only way to recruit and maintain physicians is for hospitals to offer the competitive salaries that are afforded through a provider-based arrangement. A few commenters stated that denying CAHs the opportunity to invest in physician offices in communities where physicians are desperately needed will disadvantage the patients living in those areas. One commenter requested that CMS not adopt the provisions of the proposed rule and enter into a dialogue with CAHs about an approach that would allow for the level of community-based access and collaboration being called for by the Institute of Medicine (IOM), the National Advisory Committee on Rural Health and Human Services, and other national bodies.

Response: We do not agree that CMS should not adopt the provisions in the proposed rule because, in addition to grandfathering the existing provider-based clinics, CAHs will still be able to provide needed services in their communities through existing and new provider-based clinics that meet the distance requirements and through on-campus facilities. In addition, and perhaps most importantly for those

CAHs concerned about access to primary care services in the communities that they serve, we have revised our initial proposal in order to permit CAHs to continue to operate provider-based RHCs. Additionally, physician offices, owned by CAHs, that are not provider-based (billed under the CAH's provider number) can continue to be operated by CAHs.

We agree with the IOM and other national bodies that contend that quality of care in rural areas can be maximized through collaboration. The IOM report entitled, “Quality through Collaboration: The Future of Rural Health”¹ states that some of the quality shortcomings in rural areas stem from the lack of access to “core health care services” such as primary care in the community, emergency medical services, and hospital care. We believe that CAH provider-based facilities that are located in the immediate communities of the CAH will help to ensure that the people in those communities have access to primary care. Also, CAHs will be able to utilize provider-based RHCs to provide primary care to Medicare beneficiaries.

Comment: By providing specific details and scenarios about their own CAHs, many commenters expressed other reasons for requesting that CMS not adopt this proposal. Overall, the commenters believed that the proposed requirements, if implemented, would have the unintended effect of limiting access to healthcare services for the residents of their communities. The reasons these commenters gave for requesting that CMS not adopt the proposal were as follows:

- Several commenters stated that the rule would have a devastating impact on many senior citizens who do not drive and who would therefore not have access to quality health care in their rural community. One commenter stated that the proposed change would take away their organization's opportunity to be cost reimbursed from Medicare and Medicaid. The commenters stated that this would be a roadblock to increased access to care for the elderly and low income.

- One commenter expressed concern about linking an off-campus or distinct part unit's compliance to the CAH distance requirements with the hospital's continued designation as a CAH and believed that such applications of the distance requirements could result in decreasing patients' access to surgical and other procedures that are provided in the

CAH. Other commenters were concerned that this proposed rule would ban necessary provider CAHs from operating an off-site facility.

- One commenter stated that its Medicare designation as a sole community hospital has geographic limitations, but that it should not be threatened with loss of its special reimbursement status if it meets community needs by developing provider-based or off-campus services. The commenter questioned why CMS is treating CAHs differently.

- Several commenters stated that access will be diminished in many rural communities because those areas are experiencing an increasing inability to recruit or retain physicians in non-provider-based practices due to perceived inadequate Medicare and Medicaid payment to free-standing RHCs, insufficient payment for physicians under the fee-schedule, and healthcare professional workforce shortages. One commenter stated that to continue to apply the “necessary provider” designation to off-site services will preserve one of the only methods that a CAH has to recruit physicians to rural service areas. The commenter stated that CMS should allow the necessary provider CAH to have a waiver provision for off-site services beyond January 1, 2008 if other hospitals within the radius have no objections to the services.

- One commenter stated that the proposed rule indicates CMS' interest in constraining CAHs. The commenter encouraged CMS to adopt a philosophy that limits unnecessary constraints and enables CAHs to serve their patients. The commenter urged CMS to remain supportive of the CAH program. Additionally, one commenter stated that CMS has already weighed in on the issues where cost-based reimbursement could be a major advantage and has eliminated cost-based reimbursement for certain lab services. The commenter noted that there may be situations where other services need to be considered, but that they should be dealt with on a case-by-case basis. If competitive advantage for CAHs is a concern for CMS, the commenter asked that examples be given of such arrangements and suggested that a more narrowly tailored rule should be designed to address such issues.

- Several commenters stated that the purpose of the CAH program is to provide financial stability for small rural hospitals to serve their communities. The commenters believed that this rule would eliminate the CAH's ability to provide care to rural seniors. Another commenter stated that the

¹ Institute of Medicine of the National Academies of Science; Report released on November 1, 2004.

regulation would be devastating to many provider-based clinics because they would be unable to provide the same level of care, services, and staffing as independent sites. Several commenters stated that by forcing CAHs to have services on-campus, CMS will be leaving some community members without access to services.

Response: We appreciate the varied comments. We first note that the proposed change will not eliminate the 101 percent reasonable cost reimbursement that CAHs currently receive. As stated earlier, we do not believe access to these needed services will be diminished as CAHs will still be able to increase access to care for the population of its community through a variety of means. Both the grandfathering provision of this rule, which allows for provider-based locations and off-campus distinct part psychiatric and rehabilitation units that were created or acquired before January 1, 2008, and the exclusion of provider-based RHCs from the rule provide CAHs with excellent opportunities to not only maintain access to care but to expand it as well. The role that RHCs play in providing rural communities with essential access to primary care services cannot be overemphasized.

From the inception of the CAH program, which started with the essential access community hospitals and rural primary care hospitals (EACH/RPCH) 7-State demonstration program, we have been sensitive to the special needs of, not only the CAH program, but of all rural and remote providers. This sensitivity has been demonstrated in regulations we recently adopted that provide flexibility in staffing requirements and physician oversight of nonphysician practitioners in CAHs.

Ultimately though, the distance-based requirement, as one of the requirements to become certified as a CAH, is provided for in the statute and in the regulation. We believe the distance requirement is a statutory requirement that reflects the intent of the CAH program to provide hospital-level services in essentially small rural communities. Our proposal reflects this understanding and the special status of CAHs (as opposed to other rural entities) and should not limit access to care. In addition, as the distance requirement is statutory, a waiver of the distance requirement for some CAHs, as one commenter requested, would not be allowed under the statute. However, CAHs (including necessary provider CAHs) will still be able to acquire and create new provider-based clinics as long as those provider-based clinics are either RHCs or entities that comply with

the distance requirements for a CAH that are allowed under the Act and under the requirements. In addition, all CAHs will be able to establish provider-based entities on their campus.

Comment: One commenter requested that CMS clarify provider-based location and indicate whether it includes on-campus.

Response: Provider-based status means the relationship between a main provider and a provider-based entity or a department of a provider (with all terms being defined in detail under § 413.65(a)(2)). Provider-based locations can be both on-campus and off-campus. This rule would not restrict CAHs from having a provider-based entity on campus.

Comment: One commenter stated that if CMS adopted the proposed change for CAHs it should apply to all providers, such as RHCs and Federally qualified health centers (FQHCs).

Response: We appreciate the commenter's opinion regarding treatment of all rural providers; however, we note that RHCs and FQHCs have different requirements for participating in the Medicare/Medicaid programs than those for CAHs. As we noted previously, we are excluding RHCs from the CAH provider-based requirement in light of the specific RHC certification requirements.

Comment: One commenter stated that the proposed change would limit CAH's ability to compete on a level playing field with PPS or other for-profit providers who have no restrictions on location of facilities. Another commenter stated that it is cheaper for the CAH or other hospitals to move offsite the care that does not need high cost hospital wing space, such as that provided in physical therapy. The commenters suggested that it would save CMS money on the cost-report to allow CAHs to open these offsite locations. A few commenters also stated that offsite locations may be secured much more reasonably to offer additional services than additional space which may be obtained through construction of new facilities on campus.

Response: As stated previously, there are statutory requirements that dictate the location of CAHs. These statutory location requirements support the original intent of the CAH program, that is, to ensure and extend access to healthcare services for rural and remote communities. The program was never intended to encourage competition between CAHs and PPS hospitals. However, it might be a reasonable course of action for a CAH to reevaluate whether the CAH program still meets

the needs of the immediate and surrounding communities. If the community's needs have changed, the facility may want to reconsider their CAH status and may elect to become a PPS acute care hospital without the location limitations that are imposed on CAHs and their provider-based locations.

Comment: A few commenters stated that since all of their CAHs are necessary provider CAHs, it would be geographically impossible to find a new off-campus location that would meet the 35-mile requirement and that this rule should not apply to necessary provider CAHs.

Response: We believe that there are other options for necessary provider CAHs that cannot meet the mileage requirements. Some examples that we have previously discussed are on-campus clinics, provider-based RHCs, or non-provider-based physician offices owned by CAHs.

Comment: One commenter stated that instead of a 35 (or 15)-mile restriction, a minimum mileage limitation (for example 10 miles) would be effective without the potential effect of reducing and/or limiting resources for rural citizens. Additionally, one commenter stated that it objected to CMS' classification of this new policy as a "clarification."

Response: As we have stated previously, the statute, at section 1820(c)(2)(B)(i)(I) of the Act, and the regulation, at 42 CFR § 485.610, both state that the criteria for designation as a CAH is that it must be located more than a 35-mile drive (or, in the case of mountainous terrain or in areas with only secondary roads available, a 15-mile drive) from a hospital, or another CAH. We note a provider-based clinic (other than an RHC) is considered part of the CAH and it is paid the same as the CAH, that is, 101 percent of reasonable cost. As stated above, CAHs by statute and regulation must comply with the distance requirements. As such, we view this rule as a clarification on the distance requirements of participation for CAHs and their provider-based locations and off-campus distinct part units in light of the change in statute concerning necessary provider designations.

Comment: One commenter objected to CMS proposing these changes in the hospital OPPIs proposed rule because they believed that many CAHs will not evaluate, pay attention to, or read the OPPIs proposed rule. The commenter believed that such proposed changes should be the subject of a separate proposed rule. They also believe that, as a result of CMS proposing these changes

in the OPPTS rule, CMS might not have all the information necessary to finish the rulemaking on the proposed requirements.

Response: On occasion, we have proposed changes to the CAH program in an OPPTS rulemaking. We point out that the subject of the CAH proposed changes was included in the title of the OPPTS rule. In addition, CMS has announced the proposed changes during its Open Door Forums. Having received comments from approximately 200 commenters (including various rural health and hospital associations), we are confident that we have received sufficient information, through the public comment process, necessary to complete the rulemaking process.

Comment: One commenter requested clarification on what CMS means in the termination discussion of the proposed rule and suggested that clarification was needed to explain how such a process would work in practice and how a CAH could avoid losing CAH status. In addition the commenter believed that the threat of closure is an unduly harsh punishment when payment for an offending facility could be withheld.

Response: Failure to substantially meet one or more conditions of participation is a cause for termination in the Medicare program, not closure of the CAH. A CAH with a necessary provider designation that enters into a co-location arrangement on or after January 1, 2008, or acquires or creates an off-campus facility on or after January 1, 2008, that does not satisfy the CAH distance requirements in § 485.610(c), will be placed on a 90-day termination track as outlined in section 3012 of the State Operations Manual. During this 90-day period, the CAH will be afforded every opportunity to come back into compliance and meet all conditions of participation. As we noted in the proposed rule, if the CAH corrects the situation that led to the non-compliance, the termination action against the CAH will cease.

Comment: Several commenters asked if current facilities would be allowed to relocate or be replaced and keep the current relationship under the grandfather provisions.

Response: We have addressed in greater detail the situation of a relocated CAH in the FY 2006 IPPS final rule (70 FR 47490). Generally, we believe that it would be reasonable for a CAH to be able to move its facility as long as the new facility can meet the relocation requirements contained under § 485.610(d), which specify the criteria a necessary provider CAH must satisfy upon relocation in order to retain its Medicare provider agreement as a CAH.

The requirements permit such CAHs to relocate as long as they remain essentially the same provider and continue to provide services to the same rural service area.

Comment: Several commenters requested that we state which types of entities to which this policy applies.

Response: While we do not provide a complete list of provider-based entities in this final rule with comment period, we define a provider-based entity at § 413.65(a)(2). Generally, with the exception of RHCs, this CAH provider-based rule will apply to an entity that is provider-based to a CAH that will bill Medicare under its provider number for services rendered.

After consideration of the public comments received, we are finalizing the requirements as proposed with the following revisions. For the reasons noted previously, in § 485.610(e)(2), we have revised the language of the regulation to exclude RHCs, as defined under § 405.2401(b), from the list of provider-based facilities that must comply with this requirement. We revised proposed § 485.610(e)(2) and § 485.610(e)(3) to correct the date references to “on or after January 1, 2008.” Finally, we also added the words “off-campus” before the words “provider-based locations” in § 485.610(e)(2) and § 485.610(e)(3) to conform these references to the preamble language.

B. Revisions to Hospital CoPs

1. Background

On November 27, 2006, we published a final rule in the **Federal Register** entitled “Medicare and Medicaid Programs; Hospital Conditions of Participation: Requirements for History and Physical Examinations; Authentication of Verbal Orders; Securing Medications; and Postanesthesia Evaluations” (71 FR 68672). In that final rule (also frequently referred to as the “Carve-out rule”), we finalized changes, which were based on timely public comments submitted on the proposed rule published in the March 25, 2005 **Federal Register** (70 FR 15266), to four of the requirements (or conditions of participation (CoPs)) that hospitals must meet to participate in the Medicare and Medicaid programs. Specifically, that final rule revised and updated our CoP requirements for: completion of the history and physical examination in the Medical staff and the Medical record services CoPs; authentication of verbal orders in the Nursing services and the Medical record services CoPs; securing medications in the Pharmaceutical services CoP; and,

completion of the postanesthesia evaluation in the Anesthesia services CoP. This action was initiated in response to broad criticism from the medical community that the then-current requirements governing these areas were burdensome and did not reflect current practice.

Since this final rule became effective on January 26, 2007, we have received a great number of comments and questions from providers about the timeframe requirements (for both the initial medical history and physical examination and its update) as well as about the postanesthesia evaluation requirements. In both areas, commenters have sought clarification on the application of these requirements for patients undergoing outpatient surgeries and procedures. While the new requirements contained in the Carve-out rule provide hospitals greater flexibility in ensuring the quality of *inpatient* care, the issues surrounding *outpatient* care in the hospital setting, particularly with regard to outpatient surgeries and procedures, are not clear. After conducting a thorough review of the hospital CoPs and the interpretive guidelines, we isolated the relevant issues regarding outpatient care and proposed revisions to the current regulations to address these concerns.

According to the most recent data, 30 million surgical procedures are performed each year in the United States with over 60 percent done as outpatient procedures and another 10 to 15 percent performed on a same-day admission basis. These figures combined translate to approximately 21 million surgical procedures performed each year in the U.S. on patients who are admitted to the hospital on the day of their procedure. A majority of these patients are also discharged from the hospital the same day that they are admitted. It is unclear whether these numbers also include other procedures, such as diagnostic ones, which also require anesthesia services, and which include all of the risks to patient safety inherent in such procedures. In either case, significant numbers of patients undergo surgeries and other procedures each year as either outpatients or same-day admission patients.

The current requirements for the completion of the medical history and physical examination are found in the regulations at § 482.22 (Medical staff CoP), § 482.24 (Medical record services CoP), and § 482.51 (Surgical services CoP). We believe that these requirements do not adequately address the patient who is admitted for outpatient or same-day surgery or a procedure requiring anesthesia services.

The standards at § 482.22(c), Medical staff bylaws, and § 482.24(c), Content of record, both contain requirements for a medical history and physical examination, and an update of the medical history and physical examination documenting any changes in a patient's condition if the medical history and physical examination was completed within 30 days before admission, to be completed and documented within 24 hours after admission. Under the Surgical services CoP at § 482.51(b)(1), there is a provision that requires a complete history and physical workup to be in the chart of every patient prior to surgery. However, there is currently no requirement for an updated examination of the patient, including any changes to the patient's condition, to be completed and documented after admission or registration, and prior to any surgery or procedure being performed. For patients who are admitted as inpatients for surgery to be performed in the next day or so, this does not pose a problem. These inpatients will be followed while in the hospital with both daily progress and nursing notes made in their medical record. In addition, as required under the current regulations, these patients will also have an updated examination for any changes in their condition within 24 hours after their admission.

As evidenced by the numbers of outpatient and same day admission inpatient procedures discussed above, procedures that were once done only on an inpatient basis are now routinely performed in outpatient settings. Therefore, the patient is not admitted or registered as an outpatient until the day of the procedure. Often this admission or registration is just hours before the procedure is performed. In addition, there are many patients who are admitted as inpatients on the same day that they are scheduled for more complex procedures, which will then require postoperative hospital stays. However, for patients admitted or registered for outpatient procedures as well as for those patients admitted on the same day as their surgery, there is currently no mechanism to ensure that these patients are examined for any changes in their condition prior to undergoing a procedure. Paragraph (b)(1) of § 482.51 currently requires that every patient have a complete medical history and physical examination documented in the chart prior to surgery, except in emergencies. However, the timeframe requirements for this medical history and physical examination contained under both § 482.22(c)(5) and § 482.24(c)(2)(i)(A)

allow for a medical history and physical examination that may be as much as 30 days old. Without a requirement that an updated examination be completed after admission and prior to surgery or other procedure, any changes in a patient's condition would most likely be missed by hospital staff. Failing to identify changes in a patient's condition prior to surgery may adversely impact not only the procedure but also consequently, and perhaps more significantly, the outcome of the procedure for the patient.

In the CY 2008 OPPI/ASC proposed rule (72 FR 42808), we proposed revisions to §§ 482.22, 482.24, and 482.51 that would require an updated examination, including any changes in a patient's condition, to be completed and documented for each patient after admission or registration and prior to surgery or to a procedure requiring anesthesia services. These revisions would ensure that any changes in the patient's condition are discovered before a procedure is performed. With the most up-to-date information regarding a patient's condition readily available to hospital staff prior to a procedure, the risks to patient safety should be minimized and a poor outcome for the patient would be avoided. However, under these proposed requirements, it is not our intent to include those minor procedures that only require the administration of local anesthetics, as might be the case for procedures such as biopsies of skin lesions or suturing of noncomplex lacerations.

Conversely, the current requirements at § 482.52, Anesthesia services, still distinguish between inpatients and outpatients with regard to postanesthesia evaluation, with the requirements for outpatient evaluation actually being less stringent than those for inpatients. When the current hospital regulations were originally written in 1986, these differences in regulatory oversight may have been entirely appropriate. At that time there were still very clear differences between inpatient and outpatient procedures, with inpatient procedures (and the anesthesia services required) considered much more serious and complex in nature. Since that time, there has been a gradual blurring of the distinctions between what were previously termed "inpatient" procedures and those that were classified as "outpatient" procedures. Procedures that were once done only on an inpatient basis are now routinely performed in outpatient settings. While advances in medical technology and surgical technique have allowed for this shift, the complexity

and seriousness of these procedures still remain as do the risks to patient health and safety. Along with the increased complexity and types of outpatient procedures being performed today, come the higher levels of sedation and anesthesia required for these procedures. Thus, distinctions between inpatients and outpatients in the requirements for postanesthesia evaluations are less relevant than ever.

In addition, the current language regarding the completion and documentation of an evaluation "within 48 hours after surgery" assumes that all patients receiving anesthesia services have undergone surgery. It also assumes that they have not been discharged from the hospital prior to the end of this 48-hour timeframe and that they are still available for evaluation. Many patients who have received anesthesia services (either general anesthesia or monitored anesthesia care) have undergone diagnostic or therapeutic procedures as opposed to surgical ones and are discharged within hours after such procedures. Diagnostic and therapeutic procedures that require anesthesia services (either general anesthesia or monitored anesthesia care) include esophagogastroduodenoscopy (EGD), colonoscopy, endoscopic retrograde cholangiopancreatography (ERCP), and electroconvulsive therapy (ECT). Furthermore, and as noted above, even those patients who have undergone inpatient surgical procedures are often discharged well before 48 hours after surgery.

Therefore, in the CY 2008 OPPI/ASC proposed rule (72 FR 42809), we proposed revisions to § 482.52(b) that would ensure that all patients who have received anesthesia services, regardless of inpatient or outpatient status, have a postanesthesia evaluation completed and documented by an individual qualified to administer anesthesia before they are discharged or transferred from the postanesthesia recovery area.

Finally, in our review of the CoPs, we discovered a cross-reference under § 482.23, Nursing services, that is no longer valid. We took the opportunity in the proposed rule to correct this error through a proposed technical amendment.

2. Provisions of the Final Regulations

a. Timeframes for Completion and Documentation of the Medical History and Physical Examination

The proposed revisions to § 482.22(c)(5) retained the requirement that the medical staff bylaws include a requirement that a medical history and physical examination be completed no

more than 30 days before or 24 hours after admission for each patient. We proposed to revise this provision to include the requirement that the completion and documentation of the medical history and physical examination (and the updated examination) would also be required prior to surgery or a procedure requiring anesthesia services.

We also proposed to retain the current provision that the medical staff bylaws contain a requirement for the completion and documentation of an updated examination within 24 hours after admission (when the medical history and physical examination has been completed within 30 days before admission). However, we proposed to delete the language regarding the placement of the medical history and physical examination and the updated examination in the medical record within 24 hours after admission because we believed that the proposed language requiring not only the completion, but also the documentation, of both the medical history and physical examination and the updated examination, would achieve this purpose. In addition, requirements for the physical placement of the medical history and physical examination and the updated examination in the patient's medical record are currently, and more appropriately, contained under the "Medical record services" CoP at § 482.24(c)(2), which we proposed to retain under the proposed rule.

Further, we proposed to separate the requirements for the medical history and physical examination and for the updated examination under two provisions at § 482.22(c)(5)(i) and § 482.22(c)(5)(ii), respectively. At § 482.22(c)(5)(i), we proposed to retain the current requirement that the medical history and physical examination be completed by a physician (as defined in section 1861(r) of the Act), an oromaxillofacial surgeon, or other qualified individual in accordance with State law and hospital policy. However, we proposed to add the words "and documented" after "be completed" as well as the word "licensed" after "qualified" to further clarify this requirement. In addition, we proposed to revise § 482.22(c)(5)(ii) to require that the updated examination of the patient must be completed and documented by the same individuals as proposed above. We also proposed to add the words "or registration" to follow "after admission" to reflect differences in terminology that may exist with the admission of patients for outpatient procedures. We proposed this revision here as well as in § 482.24 and § 482.51, where appropriate.

We proposed to revise the words "for any changes in the patient's condition" to "including any changes in the patient's condition" at both § 482.22(c)(5) and § 482.24(c)(2)(i)(B).

Under § 482.24(c), Content of record, we proposed to revise both § 482.24(c)(2)(i)(A) and § 482.24(c)(2)(i)(B) by adding the language "but prior to surgery or a procedure requiring anesthesia services" with regard to both the completion and the documentation of the medical history and physical examination and the updated examination.

We proposed to revise the Surgical services CoP at § 482.51(b)(1) by deleting the language regarding medical histories and physical examinations that have been dictated but which are not yet recorded in the patient's chart. Our overall intent in the proposed rule was to require that the most current information regarding a patient's condition be available to the hospital staff prior to surgery or a procedure requiring anesthesia services so that risks to patient safety can be minimized and potential adverse outcomes can be avoided.

We proposed to retain the language regarding the requirement for a medical history and physical examination prior to surgery, except in the case of emergencies, and proposed to extend this to a requirement for an updated examination. We proposed to divide the requirements for the medical history physical examination and the updated examination under two separate provisions at § 482.51(b)(1)(i) and § 482.51(b)(1)(ii) in the Surgical services CoP.

b. Requirements for Preanesthesia and Postanesthesia Evaluations

In the CY 2008 OPPS/ASC proposed rule (72 FR 42810), we proposed to revise the requirement at § 482.52(b)(1), under the "Delivery of services" standard of the "Anesthesia services" CoP for a preanesthesia evaluation to include the language "or a procedure requiring anesthesia services." We proposed this revision in order to include the range of procedures that require anesthesia services but that are not necessarily surgical in nature. We proposed to add this language under § 482.52(b)(3) for the postanesthesia evaluation requirement.

Further, we proposed to revise this standard by deleting both the words "with respect to inpatients" at § 482.52(b)(3) and the entire provision at § 482.52(b)(4), which are the current requirements for postanesthesia evaluations for patients. We proposed to

revise § 482.52(b)(3) by requiring that the postanesthesia evaluation be completed and documented before discharge or transfer from the postanesthesia recovery area. As discussed above, the intent of this section of the proposed rule was to eliminate the distinctions currently found in the regulations between inpatients and outpatients with regard to anesthesia services.

Comment: One commenter supported CMS's efforts to eliminate the distinctions, currently found in the hospital CoPs, between inpatients and outpatients with regard to history and physical examinations, examination updates, and anesthesia evaluations. They noted that the proposed changes would help to dispel misconceptions regarding documentation completion and timeframe requirements. Additionally, the commenter expressed the opinion that such revisions to the CoPs would not only ensure complete, accurate, and timely documentation, which is vital for the protection of patients and for the monitoring of the quality of care provided by clinical staff but would also ensure the efficient and effective coordination of care by case managers, discharge planners, and social services staff.

Response: We appreciate the commenter's support of the proposed changes and agree that the accurate and timely documentation of patient medical information is an essential component of quality across the spectrum of patient care.

Comment: One commenter stated that the proposed requirements for an updated examination of the patient to be completed and documented in the patient's medical record within 24 hours after admission or registration but prior to surgery or any procedure requiring anesthesia services, would be operationally and unnecessarily burdensome on hospitals. The commenter noted that the requirement would lead to surgical scheduling inefficiencies, since surgeons would need to stop procedures so that they could dictate a medical history and physical examination or an update. The commenter also expressed the opinion that it was operationally difficult, if not impossible, to ensure that documentation of a medical history and physical examination or an update was placed in the patient's medical record prior to the beginning of surgery. The commenter requested clarification on these proposed changes, particularly on which provider could complete the update and whether it would need to be dictated.

Response: The changes contained in the proposal are a clarification of the current medical history and physical examination requirements, which were contained in the Carve-out rule (71 FR 68672) published November 27, 2006, and which were discussed above. At the time of the publication of that final rule, we explained in the preamble that if the patient's medical history and physical examination was completed before admission to the hospital, the updated examination must be completed and documented within 24 hours after admission but before a surgical procedure. This original intention from the Carve-out rule has been clarified in this final rule with comment period.

Both the medical history and physical examination and the update can be completed and documented by a physician (as defined in section 1861(r) of the Act), an oromaxillofacial surgeon, or other qualified licensed individual in accordance with State law and hospital policy. The individual who completes the update does not have to be the same individual who did the medical history and physical examination. Both documents may be handwritten, dictated and transcribed, or completed electronically. Under these requirements, hospitals have the flexibility to establish their own policies for the format in which this essential patient information is documented in the medical record.

Comment: One commenter stated that they were opposed to the removal of the language in the current CoPs that requires that the medical history and physical examination be documented and placed "on the medical record" [sic] within 24 hours. The commenter expressed concerns about physicians who continue to believe that a dictated, but not yet transcribed, medical history and physical examination is adequate because it is "in the system," even though it is not yet physically in the patient's medical record. The commenter stated that the current JCAHO standards require that the medical history and physical examination be in the medical record. The commenter believed that this requirement should be reinforced in the Medicare hospital CoPs.

Response: As we stated in our discussion of the proposed change, we believe that the requirements for the physical placement of the medical history and physical examination, as well as those for its update, are more appropriately located where they currently are, that is, under the Medical record services CoP at § 482.24(c)(2), which we will retain under this rule. Furthermore, we appreciate the

commenter's concerns regarding medical histories and physical examinations that have been dictated but not yet transcribed, and, thus, are not physically present in the patient's medical record. Supporting the overall intent of this rule to require that the most current information regarding a patient's condition be *available* to hospital staff *prior* to surgery or a procedure requiring anesthesia services, we proposed to delete the language currently contained under the Surgical services CoP at § 482.51(b)(1) which allows for medical histories and physical examinations that have been dictated but which are not yet recorded in the chart. Additionally, the proposed revisions at §§ 482.22, 482.24, and 482.51 all require that the medical history and physical examination (and its update) be completed and documented in the patient's medical record within 24 hours after admission or registration but prior to surgery or a procedure requiring anesthesia services (and except in the case of emergencies as allowed for under § 482.51(b)(1)). We intend to finalize the proposed requirements without further revision. We believe that these requirements will address concerns regarding documentation and will emphasize the important role that the timely and complete documentation of patient information plays in reducing patient risk.

Comment: One commenter stated that the term "anesthesia services" should be defined in the requirements and that it should include standard terminology such as moderate sedation, deep sedation, and general anesthesia. The commenter also asked whether CMS intends to apply the same requirements regarding medical histories and physical examinations and postanesthesia evaluations to moderate sedation administered by a physician or surgeon and to general anesthesia administered by an anesthesiologist.

Response: We expect hospitals, which furnish anesthesia services, to follow the current standards of anesthesia care, along with the accepted definitions of such care, that have been established by nationally recognized bodies such as the American Society of Anesthesiologists (ASA) and the American Association of Nurse Anesthetists (AANA). We also expect that those established guidelines should be reflected in the hospital's policies and procedures regarding anesthesia services as appropriate to the scope of services offered.

The requirements for H&Ps and postanesthesia evaluations are not the same. As previously discussed, a medical history and physical

examination (and its update, if applicable) is required for each patient admitted or registered to the hospital. This requirement is not based on whether the patient is undergoing surgery or a procedure requiring anesthesia services. However, the medical history and physical examination (and its update) are required prior to surgery or a procedure requiring anesthesia services, except in the case of emergencies.

A postanesthesia evaluation would be required after surgery or a procedure requiring anesthesia services and must be completed and documented by an individual qualified to administer anesthesia. The list of individuals who are qualified to administer anesthesia is set out at § 482.52(a).

Comment: One commenter supported the proposed changes to the preanesthesia and postanesthesia evaluation requirements and believed that they reflected current standards of care. The commenter agreed with CMS' decision to remove the distinctions between inpatients and outpatients with regard to the postanesthesia evaluation. The commenter also agreed with the application of the standards to all patients receiving anesthesia services regardless of whether they were undergoing surgical or non-surgical procedures.

However, several commenters took exception to the proposed requirement that the postanesthesia evaluation be completed and documented before the patient is discharged or transferred from the postanesthesia recovery area. Several commenters stated that this part of the provision does not reflect current standards of postanesthesia care. One commenter noted that its State's regulations allow for the use of approved medical staff postanesthesia recovery area criteria, which means that qualified postanesthesia recovery area staff can discharge patients from the recovery area if they meet certain standards established by qualified anesthesia practitioners.

Another commenter pointed out that, as proposed, § 482.52(b)(3) would create a situation where patients who could be safely transferred to another unit of the hospital or discharged home would be held for hours in the recovery area. The commenter further stated that completing the postanesthesia evaluation in the recovery area is simply too soon to fully capture or address the patient's complete postanesthesia experience, including any anesthesia-related complications, which is more effectively done by anesthesia providers who make follow-up visits or phone

calls to patients either later that day or the next.

One commenter stressed that it is the surgeon or lead physician who determines when the patient is ready for discharge or transfer and that this decision is based on the monitoring and documentation of the patient by the recovery nurse. This commenter noted that though there may be some residual effects from anesthesia, this does not mean that it is inappropriate to discharge or transfer the patient from the recovery area. This commenter believed that with proper discharge instructions specific to that patient, a patient may be safely discharged home to rest following a procedure and that follow-up over the phone by the anesthesia provider would then complete the postanesthesia evaluation.

Two commenters also stated that the proposed requirement for the timing of the postanesthesia evaluation would place an undue burden on small rural hospitals where there are a limited number of anesthesia providers. They argued that such constraints would limit access to surgical services in these communities by significantly slowing down the number of cases each day. These commenters argued that such hospitals would have to hire an additional provider to comply with this requirement without yielding any benefits to patient safety or access to care.

Response: We appreciate the comments received. After consideration of the public comments and a further review of the current standards of anesthesia care, we agree that our proposed changes to the postanesthesia evaluation requirements may not truly reflect current and safe anesthesia practice, may in fact impose a burden on hospitals and anesthesia providers, and, as an unintended consequence, limit some patients' access to health care services. Therefore, we have revised the proposed requirements for the postanesthesia evaluation in this final rule with comment period to better reflect current standards of care. We are requiring that the postanesthesia evaluation must be completed and documented by an individual qualified to administer anesthesia no later than 48 hours after surgery or a procedure requiring anesthesia services, and that the postanesthesia evaluation for anesthesia recovery must be completed in accordance with State law and with hospital policies and procedures that have been approved by the medical staff and that reflect current standards of anesthesia care.

Comment: One commenter requested that CMS regularly update the online

Interpretive Guidelines to reflect changes in the hospital CoPs and that healthcare professionals and their professional associations be notified by CMS on a timely basis regarding such updates.

Response: This request is outside of the scope of this rule. However, we will forward this comment to the appropriate component within CMS responsible for the Interpretive Guidelines.

c. Technical Amendment to Nursing Services CoP

In the CY 2008 OPPTS/ASC proposed rule (72 FR 42810), we proposed to revise the cross-reference to § 405.1910(c) currently found under the nursing services CoP at § 482.23(b)(1), as this citation has been changed and is no longer valid. We proposed a technical amendment to this provision to correct the cross-reference to § 488.54(c).

We did not receive any public comments on this proposed change.

After consideration of the public comments received, we are finalizing the proposed changes without revision, with the exception of those under § 482.52(b)(3). We are revising the proposed revision to require that the postanesthesia evaluation must be completed and documented by an individual qualified to administer anesthesia no later than 48 hours after surgery or a procedure requiring anesthesia services, and that the postanesthesia evaluation for anesthesia recovery must be in accordance with State law and with hospital policies and procedures, which have been approved by the medical staff and which reflect current standards of anesthesia care. As finalized in this final rule with comment period, these requirements will provide hospitals greater flexibility while ensuring the quality and safety of care provided to patients.

XIX. Changes to the FY 2008 Hospital Inpatient Prospective Payment System (IPPS) Payment Rates

A. Background

On August 1, 2007, we issued a final rule with comment period to update the hospital inpatient prospective payment system (IPPS) for FY 2008. (This rule was printed in the August 22, 2007 **Federal Register** at 72 FR 47130 through 48175.) In that final rule with comment period, as part of the annual update of policies and payment rates under the IPPS, we adopted a new patient diagnosis classification system, the Medicare severity diagnosis-related group (MS-DRG) system, to replace the existing CMS-DRG system, effective October 1, 2007. To maintain budget

neutrality for the transition to the MS-DRG patient classification system, using the Secretary's authority under section 1886(d)(3)(A)(vi) of the Act to adjust the standardized amount to eliminate the effect of changes in coding or classification that do not reflect real change in case-mix, we also provided for a documentation and coding adjustment to the IPPS payment rates of –1.2 percent. On September 28, 2007, we issued a correction notice to the FY 2008 IPPS final rule with comment period that corrected an inadvertent technical calculation error made in the FY 2008 IPPS final rule with comment period that affected IPPS payment rates, factors, and thresholds. (This notice, which we will refer to as the “second FY 2008 IPPS correction notice,” was printed in the October 10, 2007 **Federal Register** at 72 FR 57634.)

On September 29, 2007, the TMA, Abstinence Education, and QI Programs Extension Act of 2007 (TMA), Public Law 110–90, was enacted. As discussed in more detail in section XIX.B. of this final rule, section 7 of Public Law 110–90 included a provision that reduces the –1.2 percent documentation and coding adjustment for the MS-DRG system that we adopted in the FY 2008 IPPS final rule to –0.6 percent. To comply with the provision of section 7 of Public Law 110–90, we are revising certain FY 2008 IPPS payment rate, thresholds, and factors that were included in the October 10, 2007 correction notice for the FY 2008 final rule with comment period.

In addition, in this final rule, we are making a policy change to the IPPS that was not part of Public Law 110–90. In the FY 2008 IPPS final rule, we established a policy of applying the documentation and coding adjustment to the hospital-specific rates for Medicare-dependent, small rural hospitals (MDHs) and sole community hospitals (SCHs) for FY 2008. We have determined that application of the documentation and coding adjustment to the hospital-specific rates is not consistent with the plain meaning of section 1886(d)(3)(A)(vi) of the Act. Therefore, we have decided to change this policy, effective October 1, 2007, as discussed in section XIX.B.2. of this final rule.

B. Revised IPPS Payment Rates

1. MS-DRG Documentation and Coding Adjustment

As stated earlier, we adopted the new MS-DRG patient classification system for the IPPS, effective October 1, 2007. The intent of the MS-DRG system is to better recognize severity of illness in

Medicare payment rates. Adoption of the MS-DRGs resulted in the expansion of the number of DRGs from 538 to 745. By increasing the number of DRGs and more fully taking into account severity of illness in Medicare payment rates, the MS-DRGs encourage hospitals to improve their documentation and coding of patient diagnoses. Because of the incentives that the MS-DRGs provide for improved documentation and coding of patient diagnoses, we indicated in the FY 2008 IPPS final rule that we believe the adoption of the MS-DRGs would lead to increases in aggregate payments due to improved documentation and coding without a corresponding increase in actual patient severity of illness. To maintain budget neutrality, using the Secretary's authority under section 1886(d)(3)(A)(vi) of the Act to adjust the standardized amount to eliminate the effect of changes in coding or classification that do not reflect real change in case-mix, we established a documentation and coding adjustment of -1.2 percent for FY 2008.

Section 7 of Public Law 110-90 included a provision concerning this documentation and coding adjustment for the MS-DRGs. Specifically, section 7 of Public Law 110-90 requires the Secretary to apply a prospective documentation and coding adjustment for discharges during FY 2008 of -0.6 percent rather than the -1.2 percent adjustment specified in the FY 2008 IPPS final rule. To comply with the provision of section 7 of Public Law 110-90, we are changing the IPPS documentation and coding adjustment for FY 2008 to -0.6 percent and recalculating the operating standardized amounts, capital standard Federal payment rates, the outlier threshold, the offset factors that are applied to the standardized amounts to account for projected outlier payments, and the thresholds that are used to evaluate applications for new technology add-on payments for FY 2008. All of these revised rates, factors, and thresholds are effective October 1, 2007. These revised rates, factors, and thresholds replace those rates, factors, and thresholds published in the FY 2008 IPPS final rule and in the second FY 2008 IPPS correction notice. We issued the second FY 2008 IPPS correction notice prior to enactment of Public Law 110-90 and, consequently, that correction notice did not reflect the change from the -1.2 percent to the -0.6 percent documentation and coding adjustment for FY 2008.

The revised standardized amounts are shown in Table 1A, 1B, 1C, and 1D. As expected, the standardized amounts

have increased by about 0.6 percent as a result of changes in the documentation and coding adjustment required under section 7 of Public Law 110-90.

We also have recalculated the outlier threshold based on the revised standardized amounts. As a result of the change made by section 7 of Public Law 110-90, the revised outlier threshold for FY 2008 is \$22,185. This represents a decrease of \$275 from the previously published FY 2008 outlier threshold. The revised outlier factors are: 0.948983 for operating national; 0.964060 for operating Puerto Rico; 0.952336 for capital national; and 0.959464 for capital Puerto Rico.

In addition, we have recalculated the thresholds that are being used to evaluate applications for new technology add-on payments for FY 2008 under the IPPS, as shown in Table 10 below. (We note that, for ease of reference, we have retained the original table numbering from the FY 2008 IPPS final rule and the second FY 2008 IPPS correction notice. As a result, table numbering in this section is not sequential because only certain tables from the FY 2008 IPPS final rule and the second FY 2008 IPPS correction notice require changes to comply with the provisions of section 7 of Public Law 110-90.) These thresholds, which are equal to the geometric mean standardized charges plus the lesser of 75 percent of the national adjusted operating standardized payment amount (increased to reflect the differences between costs and charges) or 75 percent of 1 standard deviation of mean charges by MS-DRG, were recalculated due to the change in the standardized operating amount resulting from the change made by section 7 of Public Law 110-90. Depending on the particular MS-DRG, the revised new technology thresholds are either the same as, or have increased slightly from, the previously published amounts.

Both the FY 2008 IPPS final rule and the second FY 2008 IPPS correction notice included a table entitled "Comparison of FY 2007 Standardized Amounts to the FY 2008 Single Standardized Amount with Full Update and Reduced Update." We are including an updated version of that table in this final rule, which reflects the payment rates, factors, and thresholds that have been revised to comply with section 7 of Public Law 110-90.

We note that section 7 of Public Law 110-90 includes provisions concerning documentation and coding adjustments to payment rates for years after FY 2008. We will address those provisions in future years' rulemaking for the IPPS.

2. Application of the Documentation and Coding Adjustment to the Hospital-Specific Rates

Under section 1886(d)(5)(D)(i) of the Act, SCHs are paid based on whichever of the following rates yields the greatest aggregate payment: the Federal national rate; the updated hospital-specific rate based on FY 1982 costs per discharge; the updated hospital-specific rate based on FY 1987 costs per discharge; or the updated hospital-specific rate based on FY 1996 costs per discharge. Under section 1886(d)(5)(G) of the Act, MDHs are paid based on the Federal national rate or, if higher, the Federal national rate plus 75 percent of the difference between the Federal national rate and the updated hospital-specific rate based on either the FY 1982, 1987, or 2002 costs per discharge. When we recalculated the FY 2008 IPPS rates to comply with the provision of section 7 of Public Law 110-90, we reviewed the policy we established in the FY 2008 IPPS final rule of applying the document and coding adjustment to the hospital-specific rates for MDHs and SCHs. In that final rule, we stated that we believe the hospital-specific rates for MDHs and SCHs should be subject to the documentation and coding adjustment that we were applying under section 1886(d)(3)(A)(vi) of the Act to maintain budget neutrality for the adoption of the MS-DRGs. That is, as these hospitals use the same DRG system as all other hospitals, we believe they should be equally subject to the budget neutrality adjustment that we were applying for adoption of the MS-DRGs to all other hospitals.

After further review of this issue, we have decided that the application of the documentation and coding adjustment to the hospital-specific rates is not consistent with the plain meaning of the statute. Section 1886(d)(3)(A)(vi) of the Act provides the Secretary with the authority to adjust "the average standardized amounts" so as to eliminate the effect of changes in coding or classification of discharges that do not reflect real changes in case-mix. However, section 1886(d)(3)(A)(vi) of the Act only provides authority to adjust the average standardized amounts, and does not refer to the hospital-specific rates. We continue to believe that it would be appropriate to apply the documentation and coding adjustment to the hospital-specific rates because we believe that aggregate IPPS payments will increase after implementation of the MS-DRGs due to incentives to improve coding and documentation. However, we believe that such an adjustment is not authorized under

section 1886(d)(3)(A)(vi) of the Act. As a result, we are establishing a policy of not applying the documentation and coding adjustment to the hospital-specific rates for FY 2008. Consequently, the revised DRG classification and recalibration factor of

0.995743, established in the October 10, 2007 correction notice for the FY 2008 IPPS final rule, which corrected the budget neutrality factor established in the FY 2008 IPPS final rule (72 FR 47416 and 47423), will be applied to the hospital-specific rates of MDHs and

SCHs for FY 2008 without application of a –1.2 percent or a –0.6 percent documentation and coding adjustment. This policy is effective October 1, 2007, for FY 2008.

XX. Medicare Graduate Medical Education Affiliation Provisions for Teaching Hospitals in Certain Emergency Situations

If you choose to comment on issues in this section, please include the caption "Medicare GME Affiliations" at the beginning of your comment.

A. Background

1. Legislative Authority

The stated purpose of section 1135 of the Act is to enable the Secretary to ensure, to the maximum extent feasible, in any emergency area and during an emergency period, that sufficient health care items and services are available to meet the needs of enrollees in Medicare, Medicaid, and the State Children's Health Insurance Program (SCHIP). Section 1135 of the Act authorizes the Secretary, to the extent necessary to accomplish the statutory purpose, to temporarily waive or modify the application of certain types of statutory and regulatory provisions (such as conditions of participation or other certification requirements, program participation or similar requirements, or preapproval requirements) with respect to health care items and services furnished by health care provider(s) in an emergency area during an emergency period.

The Secretary's authority under section 1135 of the Act arises in the

event there is an "emergency area" and continues during an "emergency period" as those terms are defined in the statute. Under section 1135(g) of the Act, an emergency area is a geographic area in which there exists an emergency or disaster that is declared by the President according to the National Emergencies Act or the Robert T. Stafford Disaster Relief and Emergency Assistance Act, and a public health emergency declared by the Secretary according to section 319 of the Public Health Service Act. (Section 319 of the Public Health Service Act authorizes the Secretary to declare a public health emergency and take the appropriate action to respond to the emergency, consistent with existing authorities.) Throughout the remainder of this discussion, we will refer to such emergency areas and emergency periods as "section 1135" emergency areas and emergency periods.

Under section 1886(h) of the Act, as amended by section 9202 of the Consolidated Omnibus Budget Reconciliation Act (COBRA) of 1985 (Public Law 99-272), the Secretary is authorized to make payments to hospitals for the direct costs of approved GME programs. Section 1886(d)(5)(B) of the Act provides for an additional payment per Medicare discharge for acute care hospitals paid under the inpatient prospective payment system (IPPS) that have

residents in an approved GME program. This additional payment is to reflect the higher patient care costs of teaching hospitals, that is, the indirect graduate medical education (IME) costs. Sections 1886(h)(4)(F) and 1886(d)(5)(B)(v) of the Act establish limits on the number of allopathic and osteopathic residents that hospitals may count for purposes of calculating direct GME payments and the IME adjustment, respectively, establishing hospital-specific direct GME and IME full-time equivalent (FTE) resident caps. Under the authority granted by section 1886(h)(4)(H)(ii) of the Act, the Secretary has issued rules to allow institutions that are members of the same affiliated group to apply their direct GME and IME FTE resident caps on an aggregate basis through a Medicare GME affiliation agreement. The Medicare regulations at §§ 413.75 and 413.79 permit hospitals, through a Medicare GME affiliation agreement, to adjust IME and direct GME FTE resident caps to reflect the rotation of residents among affiliated hospitals.

2. Existing Medicare Direct GME and Indirect GME Policies

The Medicare program makes payments to teaching hospitals to account for two types of costs, the direct costs (direct GME) and the indirect costs (IME) of a hospital's GME program. Direct GME payments represent the direct costs of training residents (for

example, resident salaries and fringe benefits, and teaching physician costs associated with an approved GME program) and generally are calculated by determining the product of the Medicare patient load (that is, the Medicare percentage of the hospital's inpatient days), the hospital's per resident payment amount, and the weighted number of FTE residents training at the hospital.

The IME adjustment is made to teaching hospitals for the additional indirect patient care costs attributable to teaching activities. For example, teaching hospitals typically offer more technologically advanced treatments to their patients, and therefore, patients who are sicker and need more sophisticated treatment are more likely to go to teaching hospitals. Furthermore, there are additional costs associated with teaching residents resulting from the additional tests or procedures ordered by residents and the demands put on physicians who supervise, and staff who support, the residents. IME payments are made as a percentage add-on adjustment to the per discharge IPPS payment, and are calculated based on the hospital's ratio of FTE residents to available beds as defined at

§ 412.105(b). The statutory formula for calculating the IME adjustment is: $c \times [(1 + r)^{405} - 1]$, where "r" represents the hospital's ratio of FTE residents to beds, and "c" represents an IME multiplier, which is set by the Congress.

The amount of IME payment a hospital receives for a particular discharge is dependent upon the number of FTE residents the hospital trains, the hospital's number of available beds, the current level of the statutory IME multiplier, and the otherwise payable per discharge IPPS payment. Sections 1886(d)(5)(B)(v) and 1886(h)(4)(F) of the Act established hospital-specific limits (that is, caps) on the number of allopathic and osteopathic FTE residents that hospitals may count for purposes of calculating indirect and direct GME payments, respectively.

3. Regulatory Changes Issued in 2006 To Address Certain Emergency Situations

As explained above, when Hurricane Katrina occurred on August 29, 2005, disrupting health care operations and medical residency training programs at teaching hospitals in New Orleans and the surrounding area, the conditions were met to establish an emergency area and emergency period under section 1135(g) of the Act. Shortly after Hurricane Katrina occurred, we were informed by hospitals in New Orleans that the training programs at many

teaching hospitals in the city were closed as a result of the disaster and that the displaced residents were being transferred to training programs at host hospitals in other parts of the country. For purposes of discussion in this rule, a host hospital is a hospital that trains residents displaced from a training program in a section 1135 emergency area. Also, a home hospital is one that meets all of the following: (1) Is located in a section 1135 emergency area (2) had its inpatient bed occupancy decreased by 20 percent or more due to the disaster so that it is unable to train the number of residents it originally intended to train in that academic year, and (3) needs to send the displaced residents to train at a host hospital.

Section 413.79(h) allows a hospital that closed, or that closed one or more of its residency training programs, to temporarily transfer FTE residents and part or all of its FTE resident caps to another hospital in order to allow the accepting hospital to count the displaced residents for direct GME and IME payment and to enable the displaced residents to complete their training despite closure of either the hospital or the residency training program in which they were originally training. In the aftermath of Hurricanes Katrina and Rita, the training programs at many teaching hospitals in New Orleans and surrounding areas were temporarily closed (or substantially reduced), and the displaced residents were even transferred to other hospitals in other parts of the country to continue their training programs. We initially suggested that hospitals whose GME programs were affected by Hurricanes Katrina and Rita could use these "closed hospital" and "closed program" regulations to address issues relating to displaced residents. (We refer readers to the CMS Q&A's Web site at: <http://questions.cms.hhs.gov>. The Web site link is located at ID 5696.)

While a number of the residents have since returned to the hurricane-affected hospitals, others remain displaced to other hospitals, including hospitals located in States outside of the section 1135 emergency area. In response to immediate concerns relating to displaced residents, CMS issued regulations on April 12, 2006 in an interim final rule with comment period published in the **Federal Register** (71 FR 18654). The regulatory changes in that rule allowed home and host hospitals under certain circumstances to form emergency Medicare GME affiliations. The purpose of these emergency Medicare GME affiliation rules was to permit Medicare GME support to be maintained while

displaced residents are training at various hospitals, even as the hurricane affected hospitals are rebuilding their training programs. The modifications to the regulations at § 413.75(b) and § 413.79(f) provided flexibility for home hospitals whose residency programs have been disrupted in an emergency area to enter into *emergency* Medicare GME affiliation agreements with host hospitals where the hospitals may not meet the regulatory requirements for regular Medicare GME affiliations. Due to the infrastructure damage and continued disruption of operations experienced by medical facilities, and the consequent disruption in residency training, caused by Hurricanes Katrina and Rita in 2005, there became an urgent need for these regulation changes to be applied retroactively.

Section 1871(e)(1)(A) of the Act, as amended by section 903(a)(1) of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Public Law 108-173), generally prohibits the Secretary from making retroactive substantive changes in policy unless retroactive application of the change is necessary to comply with statutory requirements, or failure to apply the change retroactively would be contrary to the public interest. Because existing regulations did not adequately address the issues faced by hospitals that are located in the emergency areas, or hospitals that assisted by training displaced residents from the emergency area, and because we believed hospitals affected by Hurricanes Katrina and Rita would otherwise have faced dramatic financial hardship and the recovery of graduate medical education programs in the emergency area would have been impeded, we found that failure to apply the regulatory changes in the April 12, 2006, interim final rule retroactively would be contrary to the public interest. Thus, the provisions of this interim final rule were made effective retroactively as of August 29, 2005.

To provide regulatory relief, especially in situations not addressed under existing regulations (for example, where hospitals had initially closed, but were in the process of gradually reopening their programs, or where hospitals had severely reduced but never completely closed their programs after Hurricanes Katrina and Rita), we established the emergency Medicare GME affiliation provisions in the April 12, 2006 interim final rule with comment period. In summary, the April 12, 2006 interim final rule with comment period made changes as follows:

- To provide hospitals with more flexibility to train displaced residents at various sites, and to allow host hospitals to count displaced residents for IME and direct GME payment purposes, home hospitals were permitted to enter into emergency Medicare GME affiliation agreements effective retroactive to the date of the first day of the section 1135 emergency period.

- Home hospitals were permitted to affiliate with host hospitals anywhere in the country. That is, a host hospital may be located in any State and may receive a temporary adjustment to its FTE caps to reflect displaced residents added or subtracted because the hospital is participating in an emergency Medicare GME affiliated group as defined at § 413.75(b).

- Emergency Medicare GME affiliation agreements were required to be submitted to CMS with a copy to the CMS fiscal intermediary or Medicare administrative contractor (MAC) by the later of 180 days after the section 1135 emergency period begins or by July 1 of the academic year in which the emergency Medicare GME affiliation agreement is effective. However, for hospitals affected by Hurricanes Katrina and Rita, the deadline was subsequently extended to October 9, 2006. (We refer readers to the final rule published in the **Federal Register** on July 6, 2006, for a detailed discussion (71 FR 38264 through 38266).)

- The effective period of the emergency Medicare GME affiliation agreement was permitted to begin on or after the first day of a section 1135 emergency period, and must terminate no later than at the conclusion of 2 academic years following the academic year during which the section 1135 emergency period began.

- During the effective period of the emergency Medicare GME affiliation agreement, hospitals in the emergency Medicare GME affiliated group were not required to participate in a shared rotational arrangement (as they would be under a regular Medicare GME affiliation agreement).

- Host hospitals were allowed an exception from the otherwise applicable rolling average resident count for FTE residents added as a result of an emergency Medicare GME affiliation agreement, but only during the period from August 29, 2005 to June 30, 2006.

For a detailed discussion on each of the above emergency Medicare GME affiliation provisions, we refer readers to the April 12, 2006 interim final rule with comment period. (71 FR 18654 through 18667).

In the April 12, 2006 interim final rule with comment period, we revised

the regulations at § 413.79(f) to provide for more flexibility than would have been possible under regular Medicare GME affiliations to allow home hospitals to efficiently find training sites for displaced residents. Under the flexibility provided by the emergency Medicare GME affiliated group provisions as specified at § 413.79(f)(6), decisions regarding the transfer of FTE resident cap slots, including how to distribute slots up to the home hospital's FTE resident caps in situations where the home hospital was training a number of residents in excess of its cap before the disaster, as well as the tracking of those FTE resident slots, was left to the home and host hospitals to work out among themselves.

However, the home and host hospitals were required to include much of this information in their emergency Medicare GME affiliation agreements submitted both to CMS and the CMS contractor, as specified under § 413.79(f)(6). Furthermore, since hospitals were permitted to amend their emergency Medicare GME affiliation agreements (on or before June 30 of the relevant academic year) to reflect the actual training situation among the hospitals participating in the emergency Medicare GME affiliated group, hospitals were provided with a great degree of flexibility to accommodate any changing residency training circumstances within the emergency Medicare GME affiliated group. We note that the emergency Medicare GME affiliation provisions are intended for the purpose of enabling the continued training of residents displaced from a section 1135 emergency area, and *not* to enable hospitals to take advantage of the increased flexibility in order to shift FTE resident cap slots to other hospitals in the country (for instance, in order to maximize Medicare IME and direct GME payments).

We stated in the April 12, 2006 interim final rule with comment period that, in developing a policy to provide hospitals increased flexibility in response to a disaster, we intended to address two priorities. First, we believe that in disaster situations, to the extent that the statute permits, the policy should facilitate the continuity of GME, minimizing the disruption of residency training. Second, the policy should take into account that the training programs in the section 1135 emergency area have been severely disrupted by a disaster and that the hospitals affected by the disaster will usually want to rebuild their GME programs as soon as possible.

B. Additional Changes in This Interim Final Rule With Comment Period

1. Summary of Regulatory Changes

Since the establishment of the emergency provisions in the April 12, 2006 interim final rule with comment period, we have been monitoring the application of the emergency Medicare GME affiliation agreement rules in order to assess whether those regulatory changes were adequate to address the needs of hospitals located in the section 1135 emergency area in the aftermath of Hurricanes Katrina and Rita. We understand that hospitals with GME programs in the section 1135 area continue to find it necessary to adjust the location of resident training both within and outside the emergency area, as affected hospitals continue to reopen beds at different rates, and as feedback from accreditation surveys warrants educational adjustments. Furthermore, stakeholders in Louisiana have informed CMS that they believe fluidity in GME programs will continue for several more years, and are not likely to stabilize until permanent replacement facilities are established and functioning in the emergency area. As a result, we believe the provisions first established in the April 12, 2006 interim final rule need to be further modified to meet the two priorities stated earlier. Therefore, through this interim final rule with comment period, we are modifying the regulations for emergency Medicare GME affiliated groups at § 413.79(f)(6) to provide continuing relief to home and host hospitals affected by disruptions in residency programs in the section 1135 emergency area declared after Hurricanes Katrina and Rita, as well as to provide relief for similar challenges in any future emergency situation. We note that we did receive a number of comments on the interim final rule with comment period issued on April 12, 2006. However, we believe it would be beneficial to provide the public with the opportunity to submit formal comments on these latest changes in the context of the current training situation in the area affected by Hurricanes Katrina and Rita. We intend to respond to comments submitted on both this interim final rule with comment period and the April 12, 2006 interim final rule with comment period in a future final rule.

Under existing regulations, the emergency Medicare GME affiliation agreement must be written, signed, and dated by responsible representatives of each participating hospital and must: (1) List each participating hospital and its provider number, and specify whether the hospital is a home or host hospital; (2) specify the effective period of the

emergency Medicare GME affiliation agreement (which must, in any event, terminate at the conclusion of two academic years following the academic year in which the section 1135 emergency period began); (3) list each participating hospital's IME and direct GME FTE caps in effect for the current academic year before the emergency Medicare GME affiliation (that is, if the hospital was already a member of a regular Medicare GME affiliated group before entering into the emergency Medicare GME affiliation, the emergency Medicare GME affiliation must be premised on the FTE caps of the hospital as adjusted per the regular Medicare GME affiliation agreement, and not include any slots gained under section 422 of the MMA); and (4) specify the total adjustment to each hospital's FTE caps in each year that the emergency Medicare GME affiliation agreement is in effect, for both direct GME and IME, that reflects a positive adjustment to the host hospital's direct and indirect FTE caps that is offset by a negative adjustment to the home hospital's (or hospitals') direct and indirect FTE caps of at least the same amount. The sum total of all the participating hospitals' FTE caps under the emergency Medicare GME affiliation agreement may not exceed the aggregate adjusted caps of the hospitals participating in the emergency Medicare GME affiliated group. A home hospital's IME and direct GME FTE cap reduction under an emergency Medicare GME affiliation agreement is limited to the home hospital's IME and direct GME FTE resident caps in effect for the academic year, in accordance with regulations at § 413.79(c) or § 413.79(f)(1) through (f)(5), that is, the hospital's base year FTE resident caps as adjusted by any and all existing affiliation agreements in effect as of the first day of the section 1135 period. Finally, as we stated in the April 12, 2006 interim final rule with comment period, amendments to the emergency Medicare GME affiliation agreement to adjust the distribution of the FTE resident caps specified in the original emergency Medicare GME affiliation among the hospitals that are part of the emergency Medicare GME affiliated group in order to reflect the actual placement of residents can be made through June 30 of the academic year for which it is effective. [71 FR 18662]

In this interim final rule with comment period, we are further modifying the regulations at § 413.75(b) and § 413.79(f) to allow hospitals to enter into emergency Medicare GME affiliation agreements with the

following increased flexibility. First, for emergency Medicare GME affiliation agreements involving a host hospital located in a different State from the home hospital (hereinafter, an "out-of-State host hospital"), the permissible effective period for such agreements is extended from up to 3 years (i.e., the year in which the section 1135 emergency period began plus two subsequent academic years) to up to 5 years (i.e., the year in which the section 1135 emergency period began plus four subsequent academic years). However, emergency Medicare GME affiliation agreements involving out of State host hospitals during these two additional periods may only apply with respect to the actual residents that were displaced from training in a hospital located in the section 1135 emergency area. By "actual residents that were displaced from training in a hospital located in the section 1135 area," we mean residents in an approved medical residency training program at a home hospital at the time of the disaster that were either actually training at the home hospital or were scheduled to rotate to the home hospital during the training program. For emergency Medicare GME affiliation agreements involving a host hospital located in the same State as the home hospital (hereinafter, an "in-State host hospital"), the permissible effective period for such agreements is extended from up to 3 years to up to 5 years for any resident (even those not displaced from training in a hospital located in the 1135 emergency area). Emergency Medicare GME affiliation agreements involving in-State host hospitals during these additional two academic years need not apply only with respect to the actual residents that were displaced immediately following the disaster. In other words, such agreements may apply with respect to residents that were actually displaced as a result of the disaster, as well as to new residents that were not training in the program at the time the disaster occurred. With the 2-year extension described above, the effective period of an emergency Medicare GME affiliation agreement may begin with the first day of a section 1135 emergency period, and must terminate no later than at the end of the fourth academic year following the academic year during which the section 1135 emergency period began (for Hurricanes Katrina and Rita, this would be June 30, 2010). As home hospitals recover the ability to train residents after a disaster, the effective period for emergency Medicare GME affiliation agreements is intended to allow home hospitals to balance their desire to

return residents to their original training sites, with their need to be given the opportunity to rebuild their programs incrementally. We believe extending the applicability of emergency affiliations for out of State host hospitals for 2 years (for a total of up to 5 years) only for the actual residents displaced from home hospitals allows such displaced residents to complete their training outside the affected area while providing an incentive for home hospitals to begin training new incoming residents locally (or closer to the home hospital), increasing the likelihood for the residents to stay and practice in the area after their training is completed. Affected hospitals in the New Orleans area have informed CMS that residents will tend to go into practice where they train. We believe this makes intuitive sense and the policy established in this interim final rule with comment period will provide additional impetus for residents to return to the State where their "home hospital" is located, increasing the odds that the physicians will stay and practice there, and encouraging regeneration of the health care system affected by the section 1135 emergency. We note that this is consistent with needs expressed by affected hospitals in the New Orleans area for more physicians to replace the large numbers that left immediately after the hurricane. Furthermore, after the expiration of the initial 3 years of the emergency Medicare GME affiliation agreement effective period, we believe it would be appropriate to begin bringing emergency Medicare GME affiliation rules into accord with regular Medicare GME affiliation rules which specify geographical limits. That is, regular Medicare GME affiliation rules limit hospitals geographically to affiliations with other hospitals that are located in the same urban or rural area (as those terms are defined under § 412.62(f)) or in a contiguous area.

In addition, home or host hospitals that have emergency Medicare GME affiliation agreements and are training displaced residents in nonhospital sites are permitted to submit written agreements with nonhospital sites, as described under § 413.78, that may be effective beginning with the first day of the section 1135 emergency period to cover the displaced residents training at nonhospital sites. We discuss the policy for training that occurs in the nonhospital setting and the requirements for written agreements in further detail in the following section. However, in brief, this interim final rule with comment period provides hospitals

that are participating in emergency Medicare GME affiliation agreements with increased flexibility in submitting written agreements relating to training that occurs in nonhospital sites. Home or host hospitals with valid emergency Medicare GME affiliation agreements training displaced residents in a nonhospital site may submit a copy of the written agreement, as specified under § 413.78(e)(iii) and (f)(iii) as applicable, to the CMS contractor servicing the hospital by 180 days after the first day the resident began training at the nonhospital site. We note that, as with the existing rules for written agreements specified at § 413.78(f), adjustments to the amounts specified (in other words, the total program costs and the portion of certain costs to be incurred by the hospital) in the written agreement can be made through June 30 of the academic year for which it is effective.

Furthermore, under current rules, hospitals that are training residents at nonhospital sites have two options as specified by the regulations at § 413.78(e). That is, hospitals must either have a written agreement in place before the training occurs or they must pay “all or substantially all” of the costs for the training program in the nonhospital setting attributable to training that occurs during a month by the end of the third month following the month in which the training in the nonhospital site occurred. We discuss this “concurrent payment” option in more detail in the following section. In this interim final rule with comment period, we are providing additional flexibility in the “concurrent payment” option for home or host hospitals that have emergency Medicare GME affiliation agreements and are training displaced residents in nonhospital sites by extending the time allowable for “concurrent payment” from 3 months to 6 months. That is, a home or host hospital with a valid emergency Medicare GME affiliation agreement is permitted to incur “all or substantially all” of the costs for the training program in the nonhospital setting attributable to training that occurs during a month by the end of the sixth month following the month in which the training in the nonhospital site occurred.

In the case of the section 1135 emergency resulting from Hurricanes Katrina and Rita, the time limit we are adopting to submit written agreements or to meet the “concurrent payment” requirement may have already passed. Therefore, as discussed in detail in the following section, we are providing that, for residents training in nonhospital sites during the period of August 29,

2005, to November 1, 2007, home or host hospitals with valid emergency Medicare GME affiliation agreements may submit written agreements or incur “all or substantially all” of the costs of the training program (that is, the “concurrent payment” option) to cover those specific residents by April 29, 2008.

Based on what we have learned about the impact of a disaster on teaching hospitals, we continue to believe it is necessary to provide hospitals with greater flexibility to distribute FTE resident caps within a group of home and host hospitals if there is an emergency at a home hospital resulting in the designation of a section 1135 emergency area. We believe that this modified emergency Medicare GME affiliation policy will allow affected hospitals an appropriate degree of flexibility following the disaster so that residents displaced by the disaster can continue their residency training at other hospitals, while the home hospitals can remain committed to reopening their programs.

Emergency Medicare GME affiliation agreements should be submitted to: Centers for Medicare & Medicaid Services, Division of Acute Care, Attention: Elizabeth Truong or Renate Rockwell, Mailstop C4-08-06, 7500 Security Boulevard, Baltimore, MD 21244.

“Emergency Medicare GME Affiliation Agreement” should be clearly labeled on the outside envelope.

2. Discussion of Training in Nonhospital Settings

Under the existing regulations at § 413.78(e) and (f), for portions of cost reporting periods occurring on or after October 1, 2004, the time residents spend in nonhospital settings such as freestanding clinics, nursing homes, and physicians’ offices in connection with approved programs may be included in determining the hospital’s number of FTE residents for purposes of calculating both direct GME and IME payments, if all of the following conditions are met:

(1) The resident spends his or her time in patient care activities.

(2) The hospital incurs “all or substantially all” of the costs for the training program in the nonhospital setting. In the May 11, 2007 final rule (72 FR 26948), we revised the definition of “all or substantially all of the costs for the training program in the nonhospital setting” to mean: (a) Effective on or after January 1, 1999 and for cost reporting periods beginning before July 1, 2007, the residents’ salaries and fringe benefits (including

travel and lodging where applicable) and the portion of the cost of teaching physicians’ salaries and fringe benefits attributable to direct graduate medical education (GME); and (b) effective for cost reporting periods beginning on or after July 1, 2007, at least 90 percent of the total of the costs of the residents’ salaries and fringe benefits (including travel and lodging where applicable) and the portion of the cost of teaching physicians’ salaries attributable to non-patient care direct GME activities.

(3) There is a written agreement between the hospital and the nonhospital site that indicates that the hospital will incur the costs of the resident’s salary and fringe benefits while the resident is training in the nonhospital site, and the hospital is providing reasonable compensation to the nonhospital site for supervisory teaching activities. The agreement must indicate the compensation the hospital is providing to the nonhospital site for supervisory teaching activities. In addition, in the same May 11, 2007 final rule cited above, we clarified the regulations at § 413.78(f)(3)(ii) to specify that the written agreement must be in place between the hospital and the nonhospital site before the training begins in that nonhospital site. We also specified that the written agreement must specify the total cost of the training program in the nonhospital site, the amount of the total cost that the hospital will incur (at least 90 percent of the total cost of the training program), and must indicate the portion of the amount the hospital will incur that reflects residents’ salaries and fringe benefits (and travel and lodging where applicable), and the portion of the amount the hospital will incur that reflects teaching physician compensation. Furthermore, we revised the regulations to indicate that the amounts specified in the written agreement may be modified by June 30 of the applicable academic year.

(4) Alternatively, for portions of cost reporting periods occurring on or after October 1, 2004, hospitals have two options as specified by the regulations at § 413.78(e). Hospitals must either have a written agreement in place before the training occurs or they must incur “all or substantially all” of the costs for the training program in the nonhospital setting attributable to training that occurs during a month by the end of the third month following the month in which the training in the nonhospital site occurred (the “concurrent payment” option).

For a more detailed discussion on the requirements a hospital must meet in order to count residents training in

nonhospital sites for IME and direct GME payment purposes, we refer readers to the May 11, 2007 final rule (72 FR 26948 through 26977).

Recently, it has come to our attention that in the wake of Hurricanes Katrina and Rita, host hospitals, many of which received large numbers of displaced residents, were hard-pressed to find training sites for these unanticipated residents. Many host hospitals called upon community physician practices, clinics, and other nonhospital settings to supplement existing training locations and accommodate the displaced residents. Some of the host hospitals that took in displaced residents had never before had any residency training programs, and were therefore new to Medicare rules regarding graduate medical education. In the haste and confusion surrounding this unprecedented displacement of residents, many host hospitals arranged for displaced residents to begin training in nonhospital sites without first establishing a written agreement, as specified in § 413.78(e), between the hospital and nonhospital site. Similarly, home hospitals that may have sent some of their residents away to train at host hospitals while continuing to train a reduced number of residents in the home hospital program, may find that the usual nonhospital sites for the residents in that program have also been negatively affected by the disaster. Consequently, home hospitals may have hastily arranged for displaced residents to begin training in nonhospital sites and due to the reduced administrative capability in the aftermath of the disaster, home hospitals may not have been able to establish a written agreement, as specified in § 413.78(e), with the nonhospital site before residents started training in the nonhospital site. Also, in the confusion and haste under which arrangements were made for displaced residents to train in nonhospital sites, many hospitals did not actually incur all or substantially all of the costs of the training program in the nonhospital site in accordance with our regulations at § 413.78(e)(3)(i) or (f)(3)(i).

In the April 12, 2006 interim final rule with comment period, we did not specifically mention the policies that pertain to training in nonhospital sites, although we did indicate that, to determine direct GME and IME payments under an emergency Medicare GME affiliation, all of the normal rules for counting FTEs as specified at § 413.78 apply. Based on what we have learned since the occurrence of Hurricanes Katrina and Rita, we believe it would be appropriate to provide home

hospitals that have been adversely affected by the disaster and host hospitals that accept residents pursuant to an emergency Medicare GME affiliation agreement greater flexibility in the timeframes for compliance with our nonhospital site policies. Consequently, we are providing additional flexibility in regards to the submission of written agreements by home and host hospitals by specifying in this interim final rule with comment period that home or host hospitals with a valid emergency Medicare GME affiliation agreement may submit the written agreement required under our regulations even after the residents have begun training at the nonhospital site. The submission deadline for written agreements after a disaster is subject to the following requirements: (1) A home or host hospital must be participating in a valid emergency Medicare GME affiliation and (2) a home or host hospital training displaced residents in a nonhospital site must submit a copy of the written agreement, subject to the requirements of a written agreement as specified under § 413.78 (e)(iii) or (f)(iii) as applicable, to the CMS fiscal intermediary or MAC servicing the hospital by 180 days after the first day the resident began training at the nonhospital site. We are also specifying that amendments to the written agreement can be made through June 30 of the academic year for which it is effective.

Furthermore, as we discussed above, under current rules hospitals that are training residents at nonhospital sites have the option of paying “all or substantially all” of the costs for the training program in the nonhospital setting attributable to training that occurs during a month by the end of the third month following the month in which the training in the nonhospital site occurred. For the same reasons cited above supporting our belief that it is appropriate to extend the deadline to submit written agreements after a disaster, we are also providing additional flexibility in the “concurrent payment” option for home or host hospitals that have emergency Medicare GME affiliation agreements and are training displaced residents in nonhospital sites by extending the time allowable for “concurrent payment” from 3 months to 6 months. That is, a home or host hospital with a valid emergency Medicare GME affiliation agreement is permitted to pay “all or substantially all” of the costs for the training program in the nonhospital setting attributable to training that occurs during a month by the end of the

sixth month following the month in which the training in the nonhospital site occurred.

In the case of Hurricanes Katrina and Rita, the time limits we are adopting regarding the submission of written agreements to cover residents training in nonhospital sites for home or host hospitals with a valid emergency Medicare GME affiliation agreement may have already passed. Therefore, we are providing that a home or host hospitals with valid emergency Medicare GME affiliation agreements may submit written agreements to cover residents training in nonhospital sites during the period of August 29, 2005, to November 1, 2007, by April 29, 2008. Similarly, for residents training in nonhospital sites during the period of August 29, 2005, to November 1, 2007, home or host hospitals with valid emergency Medicare GME affiliation agreements may pay “all or substantially all” of the costs of the training program (i.e., the “concurrent payment” option) to cover those specific residents by April 29, 2008.

C. Response to Comments on the April 12, 2006 Interim Final Rule With Comment Period and This Interim Final Rule With Comment Period

We note that we did receive a number of comments on the interim final rule with comment issued on April 12, 2006. We believe it would be beneficial to provide the public with the opportunity to submit formal comments on the latest changes in this interim final rule with comment period in the context of the current training situation in the area affected by Hurricanes Katrina and Rita. We intend to respond to comments submitted on both this interim final rule with comment period (to be submitted as specified in the **ADDRESSES** section of this document) and the April 12, 2006 interim final rule with comment period in a future final rule.

XXI. Files Available to the Public Via the Internet

A. Information in Addenda Related to the Revised CY 2008 Hospital OPPS

Addenda A and B to this final rule with comment period provide various data pertaining to the CY 2008 payment for items and services under the OPPS. Addendum A, which includes a complete list of all APCs payable under the OPPS, and Addendum B, which includes a complete list of all active HCPCS codes for CY 2008 and all currently active HCPCS codes that will be discontinued at the end of CY 2007 with assigned payment status and comment indicators, are available to the

public by clicking "Addendum A and Addendum B Updates" on the CMS Web site at: <http://www.cms.hhs.gov/HospitalOutpatientPPS/>.

For the convenience of the public, we are also including on the CMS Web site a table that displays the HCPCS data in Addendum B sorted by APC assignment, identified as Addendum C.

Addendum D1 defines payment status indicators that are used in Addenda A and B. Addendum D2 defines comment indicators that are used in Addendum B. Addendum E lists HCPCS codes that are only payable as inpatient procedures and are not payable under the OPPI. Addendum L contains the out-migration wage adjustment for CY 2008.

Addendum M lists the HCPCS codes that are members of a composite APC and identifies the composite APC to which they are assigned. This addendum also identifies the status indicator for the code and a comment indicator if there has been a change in the code's status with regard to its membership in the composite APC. Each of the HCPCS codes included in Addendum M has a single procedure payment APC, listed in Addendum B, to which it is assigned when the criteria for assignment to the composite APC are not met. When the criteria for payment of the code through the composite APC are met, one unit of the composite APC payment is paid, thereby providing packaged payment for all services that are assigned to the composite APC according to the specific Outpatient Code Editor (OCE) logic that applies to the APC. We refer readers to the discussion of composite APCs in section II.A.4.d of this final rule with comment period for a complete description of the composite APCs.

Those addenda and other supporting OPPI data files are available on the CMS Web site at: <http://www.cms.hhs.gov/HospitalOutpatientPPS/>.

B. Information in Addenda Related to the Revised CY 2008 ASC Payment System

Addenda AA, BB, DD1, and DD2 to this final rule with comment period provide various data pertaining to the ASC covered surgical procedures and the covered ancillary services for which ASCs may receive separate payment beginning in CY 2008 when the ancillary service provided in the ASC is integral to a covered surgical procedure and provided immediately before, during, or immediately following the covered surgical procedure. All relative payment weights and payment rates are final for CY 2008 as a result of applying the revised ASC payment system

methodology established in the final rule for the revised ASC payment system published in the **Federal Register** on August 2, 2007 (72 FR 42470) to the final CY 2008 OPPI and MPFS ratesetting information.

Addendum DD1 defines the payment indicators that are used in Addenda AA and BB to this final rule with comment period. Addenda AA and BB provide payment information regarding covered surgical procedures and covered ancillary services under the revised ASC payment system. Addendum DD2 defines the comment indicators that we are using to provide additional information about the status of ASC covered surgical procedures and covered ancillary services.

Addendum EE (available only on the Internet) lists the surgical procedures that are excluded from Medicare payment in ASCs. The excluded procedures listed in Addendum EE are surgical procedures that either are assigned to the OPPI inpatient list, are not covered by Medicare, are reported using a CPT unlisted code, or are determined to pose a significant safety risk or are expected to require an overnight stay when performed in ASCs.

Those addenda and other supporting ASC data files are included on the CMS Web site at: <http://www.cms.hhs.gov/ASCPayment/> in a format that can be easily downloaded and manipulated. The final ASC relative weights and payment rates for CY 2008 are published in this CY 2008 OPPI/ASC final rule with comment period, and related data files are included on the CMS Web site as noted above. MPFS data files are located at <http://www.cms.hhs.gov/PhysicianFeeSched/>.

The links to all of the FY 2008 IPPI wage index related tables (that are used for the CY 2008 OPPI) from the FY 2008 IPPI final rule with comment period (72 FR 47436 through 47539) as corrected in the October 10, 2007 **Federal Register** notice to the FY 2008 IPPI final rule with comment period (72 FR 57634 through 57738) are accessible on the CMS Web site at: <http://www.cms.hhs.gov/AcuteInpatientPPS/WIFN/list.asp#TopOfPage>.

For additional assistance, contact Chuck Braver, (410) 786-6719.

XXII. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995, we are required to provide 30-day notice in the **Federal Register** and solicit public comment when a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate

whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 (PRA) requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

In the CY 2008 OPPI/ASC proposed rule, we solicited public comment on each of these issues for the following sections included in the proposed rule that contain information collection requirements.

Section 419.43(h) Adjustment to national program payment and beneficiary copayment amounts: Applicable adjustments to conversion factor for CY 2009 and for subsequent calendar years

Section 419.43(h) requires hospitals, in order to qualify for the full annual update, to submit quality data to CMS, as specified by CMS. In the proposed rule, we proposed the specific requirements related to the data that must be submitted for the update for CY 2009. The burden associated with this section is the time and effort associated with collecting and submitting the data, completing participating forms and submitting charts. We estimate that there will be approximately 3,500 respondents per year.

For hospitals to collect and submit the information on the required measures, we estimate it will take 30 minutes per sampled case. Further, based on an estimated ten percent sample size and estimated populations of 2.5–5 million outpatient visits per measure, we estimate a total of 1,800,000 cases per year. In addition, we estimate that completing participation forms with require approximately 4 hours per hospital per year. We expect the burden for all of these hospitals to total 914,000 hours per year.

In this final rule with comment period, for CY 2009, we have delayed implementation of our validation process which will require participating hospitals to submit 5 charts. The burden associated with this requirement is the time and effort associated with collecting, copying, and submitting these charts. It will take approximately 2 hours per hospital to submit the 5 charts. There will be a total of approximately 17,500 charts (3,500

hospitals × 5 charts per hospital) submitted by the hospitals to CMS for a total burden of 7,000 hours. However, as noted above, this validation process will not apply for the CY 2009 update. Therefore, we expect the total burden for all hospitals for the CY 2009 updates to be 921,000 hours per year.

In section XVII.J. of this final rule with comment period, we are finalizing a provision from the FY 2008 IPPS final rule with comment period relating to the FY 2009 RHQDAPU quality measure set to include SCIP Infection 4: Cardiac Surgery Patients with Controlled 6AM Postoperative Serum Glucose and SCIP Infection 6: Surgery Patients with Appropriate Hair Removal, bringing the total number of measures in that measure set to 30.) The burden associated with the collection of these two measures was included in the burden estimates in the FY 2008 IPPS final rule with comment period (72 FR 47409 and 48169). There is no additional burden imposed in this final rule with comment period.

Section 482.22 Condition of participation: Medical staff

We proposed under § 482.22(c)(5)(i) to require that a medical history and physical examination be completed and documented no more than 30 days before or 24 hours after admission or registration, but prior to surgery or a procedure requiring anesthesia services, for each patient by a physician (as defined in section 1861(r) of the Act), an oromaxillofacial surgeon, or other qualified licensed individual in accordance with State law and hospital policy.

The burden associated with this requirement is the time and effort it would take for medical staff to document the patient's medical history and the results of a physical examination. While the burden associated with this proposed requirement is subject to the PRA, we believe the burden is exempt as defined in 5 CFR 1320.3(b)(2) because the time, effort, and financial resources necessary to comply with the requirement would be incurred by persons in the normal course of their activities.

We proposed under § 482.22(c)(5)(ii) to require that an updated examination of the patient, including any changes in the patient's condition, be completed and documented within 24 hours after admission or registration, but prior to surgery or a procedure requiring anesthesia services, when the medical history and physical examination are completed within 30 days before admission or registration. The updated examination must also be completed

and documented by the individuals as required under § 482.22(c)(5)(i).

The burden associated with this proposed requirement is the time and effort it would take for medical staff to document any changes in the patient's condition. While the burden associated with this proposed requirement is subject to the PRA, we believe the burden is exempt as defined in 5 CFR 1320.3(b)(2) because the time, effort, and financial resources necessary to comply with the requirement would be incurred by persons in the normal course of their activities.

Section 482.24 Condition of participation: Medical record services

We proposed under § 482.24(c)(2)(i) to require evidence of:

(A) A medical history and physical examination completed and documented no more than 30 days before or 24 hours after admission or registration, but prior to surgery or a procedure requiring anesthesia services. The medical history and physical examination must be placed in the patient's medical record within 24 hours after admission or registration, but prior to surgery or a procedure requiring anesthesia.

(B) An updated examination of the patient, including any changes in the patient's condition, when the medical history and physical examination are completed within 30 days before admission or registration. Documentation of the updated examination must be placed in the patient's medical record within 24 hours after admission or registration, but prior to surgery or a procedure requiring anesthesia services.

While the burden associated with these two proposed requirements is subject to the PRA, we believe the burden is exempt as defined in 5 CFR 1320.3(b)(2) because the time, effort, and financial resources necessary to comply with the requirement would be incurred by persons in the normal course of their activities.

Section 482.51 Condition of participation: Surgical services

We proposed under § 482.51(b)(1) to require medical staff, prior to surgery or a procedure requiring anesthesia services, and except in the case of emergencies, to document no more than 30 days before or 24 hours after admission or registration a patient's medical history, the results of the patient's physical examination, and any changes in the patient's condition.

While the burden associated with these requirements is subject to the PRA, we believe the burden is exempt as defined in 5 CFR 1320.3(b)(2) because the time, effort, and financial resources

necessary to comply with the requirement would be incurred by persons in the normal course of their activities.

Section 482.52 Condition of participation: Anesthesia services

We proposed under § 482.52(b)(1) to require a preanesthesia evaluation to be completed and documented by an individual qualified to administer anesthesia, performed within 48 hours prior to surgery or a procedure requiring anesthesia services. We proposed under § 482.52(b)(3) to require a postanesthesia evaluation to be completed and documented by an individual qualified to administer anesthesia, after surgery or a procedure requiring anesthesia services, but before discharge or transfer from the postanesthesia recovery area.

As discussed in section XVIII.B.2. of this final rule with comment period, in response to public comments, we have revised § 482.52(b)(3) to specify that a postanesthesia evaluation must be completed and documented no later than 48 hours after surgery or a procedure requiring anesthesia services. The postanesthesia evaluation must be completed in accordance with State law and with hospital policies and procedures that are approved by the medical staff and that reflect current standards of anesthesia care.

While the burden associated with these requirements is subject to the PRA, we believe the burden is exempt as defined in 5 CFR 1320.3(b)(2) because the time, effort, and financial resources necessary to comply with the requirement would be incurred by persons in the normal course of their activities.

In section XX. of this document, we are specifying the requirement for the submittal of emergency Medicare GME affiliation agreements under the provisions of § 413.79(f) of the regulations by hospitals in declared emergency areas. The burden associated with this requirement is the time and effort it would take for the GME affiliated hospital to develop and submit the emergency Medicare GME affiliation agreement. It is difficult for us to determine estimated annual burden because we do not know how many hospitals will be affected in any given disaster. It would depend on what resources are available to the affected hospitals after sustaining damage from the disaster. This could take a few hours per hospital or much longer depending on if they keep records available and current. Hospitals also have to coordinate with other hospitals to draw up an affiliation agreement which may

take more time if the hospitals have to negotiate.

We have submitted a copy of this final rule with comment period and this interim final rule with comment period to OMB for its review of the information collection requirements described above. These requirements are not effective until they have been approved by OMB.

If you comment on these information collection and recordkeeping requirements, please mail copies directly to the following:

Centers for Medicare & Medicaid Services, Office of Strategic Operations and Regulatory Affairs, Division of Regulations Development, Attn: Melissa Musotto, (CMS-1392-FC for OPPS/ASC matters, or CMS-1531-IFC2, for Medicare GME Affiliation Agreement matters) Room C4-26-05, 7500 Security Boulevard, Baltimore, MD 21244-1850; and Office of Information and Regulatory Affairs, Office of Management and Budget, Room 10235, New Executive Office Building, Washington, DC 20503, Attn: Carolyn Lovett, CMS Desk Officer, CMS-1392-FC for OPPS/ASC matters, or CMS-1531-IFC2, for Medicare GME Affiliation Agreement matters carolyn_lovett@omb.eop.gov. XXIII. Response to Comments

Because of the large number of public comments we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this final rule with comment period, and, when we proceed with a subsequent document(s), we will respond to those comments in the preamble to that document(s).

XXIV. Regulatory Impact Analysis

A. Overall Impact

We have examined the impacts of this final rule with comment period as required by Executive Order 12866 (September 1993, Regulatory Planning and Review), the Regulatory Flexibility Act (RFA) (September 19, 1980, Public Law 96-354), section 1102(b) of the Social Security Act, the Unfunded Mandates Reform Act of 1995 (Public Law 104-4), and Executive Order 13132.

1. Executive Order 12866

Executive Order 12866 (as amended by Executive Order 13258, which merely reassigns responsibility of duties) directs agencies to assess all costs and benefits of available regulatory

alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). A regulatory impact analysis (RIA) must be prepared for major rules with economically significant effects (\$100 million or more in any 1 year).

We estimate that the effects of the OPPS provisions that would be implemented by this final rule with comment period will result in expenditures exceeding \$100 million in any 1 year. We estimate the total increase (from changes in this final rule with comment period as well as enrollment, utilization, and case-mix changes) in expenditures under the OPPS for CY 2008 compared to CY 2007 to be approximately \$3.4 billion.

We estimate that implementing the revised ASC payment system in CY 2008 based on the August 2, 2007 final rule for the revised ASC payment system and the final policies in this CY 2008 OPPS/ASC final rule with comment period (such as adding 11 procedures to the ASC list of covered surgical procedures and designating 18 additional procedures as office-based) will have no net effect on Medicare expenditures in CY 2008 compared to the level of expenditures that would have occurred in CY 2008 in the absence of the revised payment system. A more detailed discussion of the effects of the changes to the ASC list of covered surgical procedures and the effects of the revisions to the ASC payment system in CY 2008 is provided in section XXIV.C. of this final rule with comment period.

While we estimate that there will be no net change in Medicare expenditures in CY 2008 as a result of implementing the revised ASC payment system and the ASC provisions of this final rule with comment period, we estimate that the revised system will result in savings of \$220 million over 5 years due to migration of new ASC covered surgical procedures from HOPDs and physicians' offices to ASCs over time. In addition, we note that there will be a total increase in Medicare payments to ASCs of approximately \$240 million for CY 2008 compared to Medicare expenditures that would have occurred in the absence of the revised payment system. These additional payments to ASCs of approximately \$240 million in CY 2008 will be fully offset by savings from reduced Medicare spending in HOPDs and physicians' offices on services that migrate from these settings to ASCs, as described in detail in

section XVI.L. of this final rule with comment period.

Our estimate in this final rule with comment period of 5-year savings as a result of the revised ASC payment system and our estimate of additional payments to ASCs in CY 2008 differ slightly from the estimates presented in the August 2, 2007 revised ASC payment system final rule. The ASC budget neutrality adjustment and the resulting savings estimates in the August 2, 2007 final rule are calculated using CY 2005 utilization data, the current CY 2007 OPPS relative weights with an estimated update factor for CY 2008, and the CY 2007 MPFS PE RVUs trended forward to CY 2008. The ASC budget neutrality adjustment and the resulting savings estimates in this final rule with comment period are calculated using the newly available CY 2006 utilization data, the CY 2008 OPPS relative payment weights finalized in this final rule with comment period, and the CY 2008 MPFS PE RVUs finalized in the CY 2008 MPFS final rule. As we indicated in the August 2, 2007 revised ASC payment system final rule, the estimates in that rule were meant to be illustrative of the final policies only, in large part because we used the existing CY 2007 OPPS relative payment weights and the existing CY 2007 MPFS PE RVUs to estimate the CY 2008 values. Because the savings estimates in this final rule with comment period are based on the final CY 2008 OPPS relative payment weights that have just become available in this final rule with comment period and the final CY 2008 MPFS PE RVUs that recently became available in the CY 2008 MPFS final rule with comment period, the estimates in this final rule with comment period based on that newly available information represent our best estimates at this time.

This final rule with comment period is an economically significant rule under Executive Order 12866, and a major rule under 5 U.S.C. 804(2).

2. Regulatory Flexibility Act (RFA)

The RFA requires agencies to determine whether a rule would have a significant economic impact on a substantial number of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Most hospitals and most other providers and suppliers are small entities, either by nonprofit status or by having average annual revenues of \$31 million or less.

For purposes of the RFA, we have determined that approximately 37 percent of hospitals and 73 percent of

ASCs would be considered small entities according to the Small Business Administration (SBA) size standards. (We refer readers to the standards at the Web site: http://www.sba.gov/idc/groups/public/documents/serv_sstd_tablepdf.pdf). Individuals and States are not included in the definition of a small entity.

Not-for-profit organizations are also considered to be small entities under the RFA. There are 2,141 voluntary hospitals that we consider to be not for-profit organizations to which this final rule with comment period applies.

3. Small Rural Hospitals

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. With the exception of hospitals located in certain New England counties, for purposes of section 1102(b) of the Act, we previously defined a small rural hospital as a hospital with fewer than 100 beds that is located outside of a Metropolitan Statistical Area (MSA) (or New England County Metropolitan Area (NECMA)). However, under the new labor market definitions that we adopted in the CY 2005 final rule with comment period (consistent with the FY 2005 IPPS final rule), we no longer employ NECMAs to define urban areas in New England. Therefore, we now define a small rural hospital as a hospital with fewer than 100 beds that is located outside of an MSA. Section 601(g) of the Social Security Amendments of 1983 (Public Law 98–21) designated hospitals in certain New England counties as belonging to the adjacent NECMA. Thus, for purposes of the OPSS, we classify these hospitals as urban hospitals. We believe that the changes to the OPSS in this final rule with comment period will affect both a substantial number of rural hospitals as well as other classes of hospitals and that the effects on some may be significant. The changes to the ASC payment system for CY 2008 will have no effect on small rural hospitals. Therefore, we conclude that this final rule with comment period will have a significant impact on a substantial number of small rural hospitals.

4. Unfunded Mandates

Section 202 of the Unfunded Mandates Reform Act of 1995 (Public Law 104–4) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of \$100

million in 1995 dollars, updated annually for inflation. That threshold level is currently approximately \$120 million. This final rule with comment period does not mandate any requirements for State, local, or tribal government, nor does it affect private sector costs.

5. Federalism

Executive Order 13132 establishes certain requirements that an agency must meet when it publishes any rule (proposed or final) that imposes substantial direct costs on State and local governments, preempts State law, or otherwise has Federalism implications.

We have examined this final rule with comment period in accordance with Executive Order 13132, Federalism, and have determined that it will not have an impact on the rights, roles, and responsibilities of State, local or tribal governments. As reflected in Table 61, we estimate that OPSS payments to governmental hospitals (including State and local governmental hospitals) will increase by 3.9 percent under this final rule with comment period. The provisions related to payments to ASCs in CY 2008 will not affect payments to government hospitals.

B. Effects of OPSS Changes in This Final Rule With Comment Period

We are making several changes to the OPSS that are required by the statute. We are required under section 1833(t)(3)(C)(ii) of the Act to update annually the conversion factor used to determine the APC payment rates. We are also required under section 1833(t)(9)(A) of the Act to revise, not less often than annually, the wage index and other adjustments. In addition, we must review the clinical integrity of payment groups and weights at least annually. Accordingly, in this final rule with comment period, we are updating the conversion factor and the wage index adjustment for hospital outpatient services furnished beginning January 1, 2008, as we discuss in sections II.C. and II.D., respectively, of this final rule with comment period. We also are revising the relative APC payment weights using claims data from January 1, 2006, through December 31, 2006, and updated cost report information. In response to a provision in Public Law 108–173 that we analyze the cost of outpatient services in rural hospitals relative to urban hospitals, we are continuing increased payments to rural SCHs, including EACHs. Section II.F. of this final rule with comment period provides greater detail on this rural adjustment. Finally, we are removing

one device category, HCPCS code C1820 (Generator, neurostimulator, (implantable), with rechargeable battery and charging system), from pass through payment status in CY 2008.

Under this final rule with comment period, the update change to the conversion factor as provided by statute will increase total OPSS payments by 3.3 percent in CY 2008. The one time wage reclassification under section 508 expired September 30, 2007, and therefore, is not contemplated in this final rule with comment period. The changes to the APC weights, including the changes that will result from the expansion of packaging, changes to the wage indices, and the continuation of a payment adjustment for rural SCHs and EACHs with extension to brachytherapy sources in CY 2008 will not increase OPSS payments because these changes to the OPSS are budget neutral. However, these updates do change the distribution of payments within the budget neutral system as shown in Table 61 and described in more detail in this section.

1. Alternatives Considered

Alternatives to the changes we are making and the reasons that we have chosen the options are discussed throughout this final rule with comment period. Some of the major issues discussed in this final rule with comment period and the options considered are discussed below.

a. Alternatives Considered for the Packaging Policies for CY 2008 OPSS

In section II.A.4.c. of this final rule with comment period, we are packaging payment for the following seven categories of ancillary and supportive services into payment for the independent service with which they are billed. We are also making payment for several composite APCs in which a single payment is made for multiple major services that are commonly performed on the same date. We discuss below each category of services that we are packaging and each set of services for which we are establishing a composite APC.

(1) Guidance Services

We are packaging payment for supportive guidance services into the payment for the independent procedure to which the guidance service is ancillary and supportive. In the case of one particular guidance procedure, which would usually be provided in conjunction with another independent procedure but may occasionally be provided without another independent service on the same date of service, we

will permit separate payment if the service is billed without an independent procedure on the same date of service. We refer readers to section II.A.4.c.(1) of this final rule with comment period for the complete discussion of this final policy. We considered several policy options for the payment of guidance services in CY 2008.

The first alternative we considered was to not make any changes to packaging for the CY 2008 OPPS. Under this alternative, codes that were packaged for CY 2007 would have remained packaged for CY 2008 and codes that were separately paid for CY 2007 would have remained separately paid for CY 2008. There are a number of CPT codes that describe independent surgical procedures for which the code descriptors indicate that guidance is included in the code reported for the surgical procedure if it is used and, therefore, for which the OPPS already makes packaged payment for the associated guidance service. With a number of guidance services already packaged, we did not select this option in part because we did not want to create financial incentives for hospitals to use one form of guidance instead of another or to use guidance all the time, even if a procedure could be safely provided without guidance. Furthermore, we believe this alternative would not provide additional incentives for hospitals to utilize the most cost-effective and clinically advantageous method of guidance that is appropriate in each situation.

The second alternative we considered was to package the costs of guidance services in all cases, without regard to the possibility of the service being furnished without an independent service on the same date of service. We did not select this alternative because we believe that in the case of one particular guidance procedure, the procedure may sometimes be appropriately furnished without other independent services on the same date and in these cases, we believe that there should be separate payment for the guidance service.

The third alternative we considered, and the alternative we selected, was to unconditionally package payment for most supportive guidance services, while allowing separate payment for one particular guidance service when that guidance service is furnished without an independent service. When guidance services are furnished as an ancillary and supportive adjunct to an independent procedure, we are packaging payment for all guidance procedures. When one specific guidance service (which is occasionally not

provided in conjunction with an independent procedure on the same date of service) is not provided on the same date as an independent procedure, we will pay separately for that service. We believe that this alternative will provide the most appropriate incentives to control volume and spending for these services, without discouraging the performance of the service in those infrequent cases when one particular guidance service is provided without an independent procedure.

(2) Image Processing

We are packaging payment for image processing services into the payment for the major independent service to which the image processing service is ancillary and supportive. We refer readers to section II.A.4.c.(2) of this final rule with comment period for the complete discussion of this final policy. We considered several policy options for the payment of image processing services in CY 2008.

The first alternative we considered was to make no changes to packaging for the CY 2008 OPPS. Under this alternative, codes that were packaged for CY 2007 would have remained packaged for CY 2008 and codes that were separately paid for CY 2007 would have remained separately paid for CY 2008. We did not select this alternative because we believe it would not provide additional incentives for hospitals to utilize the most cost-effective and clinically advantageous image processing services that are appropriate in each situation.

The second alternative we considered was to package the costs of image processing services in cases in which the image processing service is furnished on the same date as an independent service to which the image processing service is ancillary and supportive but to pay separately for the image processing service when it is furnished without an independent service on the same date of service. We did not select this alternative because it would not have provided substantial additional incentives for hospitals to utilize image processing in the most cost-effective and clinically advantageous manner.

The third alternative we considered, and ultimately selected, was to package payment for the costs of image processing services in all cases, without regard to the possibility of the service being furnished without an independent service on the same date of service. While an image processing service is not necessarily provided on the same date of service as the independent procedure to which it is ancillary and supportive,

providing separate payment for each imaging processing service whenever it is performed is not consistent with encouraging value-based purchasing under the OPPS. We believe it is important to package payment for supportive dependent services that accompany independent procedures but that may not need to be provided face-to-face with the patient in the same encounter as the independent service. Packaging encourages hospitals to establish protocols that ensure that services are furnished only when they are medically necessary and to carefully scrutinize the services ordered by practitioners to minimize unnecessary use of hospital resources. Therefore, we believe that this alternative will provide additional appropriate incentives to control volume and spending for these services, without discouraging the use of the service in those infrequent cases when it is provided with an independent procedure but on a different date of service.

(3) Intraoperative Services

We are packaging payment for intraoperative services into the payment for the independent procedure to which the intraoperative service is ancillary and supportive. In the case of two intraoperative services, which would usually be provided in conjunction with another independent procedure but may occasionally be provided without another independent service on the same date of service, we will permit separate payment if the services are billed without an independent procedure on the same date of service. We refer readers to section II.A.4.c.(3) of this final rule with comment period for the complete discussion of this final policy. We considered several policy options for the payment of intraoperative services in CY 2008.

The first alternative we considered was to make no changes to packaging for the CY 2008 OPPS. Under this alternative, codes that were packaged for CY 2007 would have remained packaged for CY 2008 and codes that were separately paid for CY 2007 would have remained separately paid for CY 2008. We did not select this alternative because we believe it would not provide additional incentives for hospitals to utilize the most cost-effective and clinically advantageous intraoperative services that are appropriate in each situation.

The second alternative we considered was to package payment for the costs of intraoperative services in all cases, without regard to the possibility of the service being furnished without an independent service on the same date of

service. We did not select this alternative because we believe that, in the case of two particular intraoperative procedures, those procedures may sometimes be appropriately furnished without other independent services on the same date and, in these cases, we believe that there should be separate payment for the intraoperative services.

The third alternative we considered, and ultimately selected, was to unconditionally package the costs of intraoperative services in all cases except two, to allow for the possibility of these two intraoperative services being furnished without an independent service on the same date of service. We believe that there is some possibility that these procedures could be appropriately performed without another independent procedure on the same date of service. We do not believe this to be true of the other intraoperative services that we proposed to unconditionally package. We selected this alternative because we believe it unlikely that intraoperative services other than the two particular services would ever be provided without an independent service. Packaging encourages hospitals to establish protocols that ensure that services are furnished only when they are medically necessary and to carefully scrutinize the services ordered by practitioners to minimize unnecessary use of hospital resources. We believe that this is the most appropriate alternative because, in general, it creates additional incentives for hospitals to provide intraoperative services only when both medically necessary and cost efficient for the individual patient. Therefore, we believe that this alternative will provide the most appropriate incentives to control volume and spending for these services.

(4) Imaging Supervision and Interpretation Services

We are unconditionally packaging payment for some imaging supervision and interpretation services into the payment for the independent service to which the imaging supervision and interpretation service is ancillary and supportive and conditionally packaging payment for other imaging supervision and interpretation services when the independent service has a status indicator of "T." For this latter subset of codes, we are permitting separate payment if there is no service with status indicator of "T" billed the same date of service. We refer readers to section II.A.4.c.(4) of this final rule with comment period for the complete discussion of this final policy. We considered several policy options for

the payment of imaging supervision and interpretation services in CY 2008.

The first alternative we considered was to make no changes to packaging for the CY 2008 OPPS. Under this alternative, codes that were packaged for CY 2007 would have remained packaged and codes that were separately paid for CY 2007 would have remained separately paid for CY 2008. We did not select this alternative because we believe it would not provide additional incentives for hospitals to utilize the most cost effective and clinically advantageous imaging supervision and interpretation services that are appropriate in each situation.

The second alternative we considered was to unconditionally package imaging supervision and interpretation procedures that we believe are always integral to and dependent upon an independent separately payable procedure, but to conditionally package payment for those imaging supervision and interpretation services that we believe are sometimes furnished without another separately payable service on the same date. We did not accept this alternative because commenters convinced us that to do this would sometimes result in packaging these services with services for which packaging of the imaging supervision and interpretation services was inappropriate (for example, visits and minor diagnostic tests).

The third alternative we considered, and the alternative we selected, was to unconditionally package imaging supervision and interpretation procedures that we believe are always integral to and dependent upon an independent separately payable procedure, but to conditionally package payment for certain imaging supervision and interpretation services only when they are provided on the same date of service as a service with a status indicator of "T." We believe that this alternative is the most appropriate choice because it creates additional incentives for hospitals to provide services only when medically necessary to an individual patient when the supervision and interpretation service is furnished as an ancillary and supportive adjunct to the independent procedural service and does not package the payment for the supervision and interpretation service with the payment for a visit or other service. We will pay separately for some imaging supervision and interpretation services in those cases where they are not furnished on the same date as a service with status indicator of "T." Therefore, we believe that this alternative will provide the most appropriate incentives to control

volume and spending for these services, without discouraging the performance of the services in those cases when they are furnished with a service with a status indicator other than "T."

(5) Diagnostic Radiopharmaceuticals

We are packaging payment for diagnostic radiopharmaceuticals into the payment for their associated nuclear medicine procedures. In response to comments, we are using only claims for nuclear medicine procedures that contain a Level II HCPCS code for a diagnostic radiopharmaceutical to set the median costs for the nuclear medicine services, and we are implementing claims processing edits that require that a nuclear medicine service must have a diagnostic radiopharmaceutical HCPCS code on the same claim to be accepted for processing. We refer readers to section II.A.4.c.(5) of this final rule with comment period for the complete discussion of this final policy. We considered several policy options for the payment of diagnostic radiopharmaceuticals in CY 2008.

The first alternative we considered was to make no changes to our packaging methodology for diagnostic radiopharmaceuticals in the CY 2008 OPPS. Under this alternative, diagnostic radiopharmaceuticals with a mean per-day cost of \$60 or less would be packaged into the payment for associated procedures present on the claim. Diagnostic radiopharmaceuticals with a per-day cost over \$60 would receive separate payment. We did not select this alternative because we believe it would not provide additional incentives for hospitals to utilize the most cost-effective and clinically advantageous diagnostic radiopharmaceuticals that are appropriate in each situation.

The second alternative we considered was to package the costs of diagnostic radiopharmaceuticals in cases in which the diagnostic radiopharmaceutical is furnished on the same date as an independent service to which the diagnostic radiopharmaceutical is ancillary and supportive, but to pay separately for the diagnostic radiopharmaceutical when it is furnished without an independent service on the same date of service. We did not select this alternative because diagnostic radiopharmaceuticals are always intended to be used with a diagnostic nuclear medicine procedure. Our claims data indicate that diagnostic radiopharmaceuticals are infrequently provided on a different date of service from a nuclear medicine procedure. Because our standard OPPS ratesetting

methodology packages costs across dates of service on “natural” single claims, we believe that our standard methodology adequately captures the costs of diagnostic radiopharmaceuticals associated with diagnostic nuclear medicine procedures that are not provided on the same date of service.

The third alternative we considered, and the alternative we selected, was to package the costs of diagnostic radiopharmaceuticals with their associated nuclear medicine procedures, to calculate the median costs of nuclear medicine procedures using only claims that contain a Level II HCPCS code for a diagnostic radiopharmaceutical, and to implement claims processing edits that require that a claim that reports a code for a nuclear medicine procedure must also contain a code for a diagnostic radiopharmaceutical to be accepted for processing. Packaging the costs of supportive items and services into the payment for the independent procedure or service with which they are associated encourages additional hospital efficiencies and enables hospitals to better manage their resources with maximum flexibility. Diagnostic radiopharmaceuticals are always intended to be used with a diagnostic nuclear medicine procedure, and are, therefore, particularly well suited for packaging under the OPPTS for the reasons identified in section II.A.4.c.(5) of this final rule with comment period. Moreover, calculating the median cost of nuclear medicine procedures using only claims that also contain at least one diagnostic radiopharmaceutical will ensure that the cost of the radiopharmaceuticals used in the procedure will be captured in the median cost. In addition, implementing a claims processing edit that will require that a claim that contains a code for a nuclear medicine procedure must also contain a code for a diagnostic radiopharmaceutical will ensure that in future years, all claims for nuclear medicine procedures will include the cost of the radiopharmaceuticals used to furnish the service.

(6) Contrast Media

We are packaging payment for contrast media into their associated independent diagnostic and therapeutic procedures. We refer readers to section II.A.4.c.(6) of this final rule with comment period for the complete discussion of this final policy. We considered several policy options for the payment of contrast media in CY 2008.

The first alternative we considered was to make no changes to our

packaging methodology for contrast media in the CY 2008 OPPTS. Under this alternative, contrast media with a mean per-day cost of \$60 or less would be packaged into the payment for associated procedures present on the claim. Contrast media with a per-day cost over \$60 would receive separate payment. We did not select this alternative because we believe it would not provide additional incentives for hospitals to utilize contrast media in the most cost-effective and clinically advantageous manner. With most contrast media already packaged based on our \$60 packaging threshold, this alternative would potentially maintain inconsistent payment incentives across similar products.

The second alternative we considered was to package the costs of contrast media in cases in which the contrast medium is furnished on the same date as an independent service but to pay separately for the contrast medium when it is furnished without an independent service on the same date of service. We did not select this alternative because we believe it is unlikely that contrast media would ever be provided without an independent service on the same date of service.

The third alternative we considered, and the alternative we selected, was to unconditionally package the costs of contrast media with their associated independent diagnostic and therapeutic procedures. The vast majority of contrast media will currently be packaged under the \$60 packaging threshold. Given that most contrast agents will already be packaged under the OPPTS in CY 2008, we believe it would be desirable to package payment for the remaining contrast agents, as this approach promotes additional efficiency and results in a more consistent payment policy across products that may be used in many of the same independent procedures. In the case of echocardiography procedures that are performed with contrast, we have established separate Level II HCPCS codes to report these services, so that we will pay for contrast and noncontrast studies through separate APC groups as section 1833(t)(2)(G) of the Act requires. The median cost of the APC for noncontrast echocardiography services was set based on those claims for the studies that also reported a contrast agent, to ensure that the procedure payment includes the cost of the necessary contrast agent.

(7) Observation Services

We are packaging payment for all observation care, reported under HCPCS code G0378 (Hospital observation

services, per hour) for CY 2008.

Payment for observation will be packaged as part of the payment for the separately payable services with which it is billed. In addition, we created two additional composite APCs for extended assessment and management, of which observation care is a component. We refer readers to section II.A.4.c.(7) of this final rule with comment period for the complete discussion of this final policy. We considered several policy options for the payment of observation services in CY 2008.

The first alternative we considered was to make no changes to payment of observation services for the CY 2008 OPPTS. Since January 1, 2006, hospitals have reported observation services based on an hourly unit of care using HCPCS code G0378. This code has a status indicator of “Q” under the CY 2007 OPPTS, meaning that the OPPTS claims processing logic determines whether the observation is packaged or separately payable. The OCE’s current logic determines whether observation care billed under G0378 is separately payable through APC 0339 (Observation), or whether payment for observation services will be packaged into the payment for other separately payable services provided by the hospital in the same encounter based on criteria discussed in more detail in section II.A.4.c.(7) of this final rule with comment period. For CY 2007, we continued to apply the criteria for separate payment for observation care and the coding and payment methodology for observation care that were implemented in CY 2006. We did not select this alternative because the current criteria for separate payment for observation services treat payment for observation care for various clinical conditions differently and may provide disincentives for efficiency. In addition, there has been substantial growth in program expenditures for hospital outpatient services under the OPPTS in recent years, a trend that is reflected in the rapidly increasing volume of claims for separately payable observation services. This alternative would not provide additional incentives for hospitals to utilize observation services in the most cost effective and clinically advantageous manner.

The second alternative we considered was to accept the APC Panel’s recommendations to add syncope and dehydration to the list of diagnoses eligible for separate payment or to consider other clinical conditions for separate payment for observation care. We believe that, in certain circumstances, observation could be appropriate for patients with a range of

diagnoses. Both the APC Panel and numerous commenters to prior OPPS proposed rules have confirmed their agreement with this perspective. However, as packaging payment provides additional desirable incentives for more efficient delivery of health care and provides hospitals with significant flexibility to manage their resources, we believe it is most appropriate to treat observation care for all diagnoses similarly by packaging its costs into payment for the separately payable procedures with which the observation is associated. Consequently, we did not select this alternative to expand separate observation payment to additional diagnoses.

The third alternative we considered was to package payment for all observation services reported with HCPCS code G0378 under the CY 2008 OPPS. We believe this is the most appropriate alternative within the context of our packaging approach because observation is always provided as a supportive service in conjunction with other independent separately payable hospital outpatient services such as an emergency department visit, surgical procedure, or another separately payable service, and thus its costs can be packaged into the OPPS payment for such services. We believe that packaging payment into larger payment bundles creates incentives for providers to furnish services in the most efficient way that meets the needs of the patient, encouraging long-term cost containment. With approximately 70 percent of the occurrences of observation care billed under the OPPS currently packaged, this alternative will extend the incentives for efficiency already present for the vast majority of observation care that is already packaged under the OPPS to the remaining 30 percent of observation care for which we currently make separate payment.

However, based on the public comments we received, while we are adopting our proposal to package payment for all observation services reported with HCPCS code G0378 under the CY 2008 OPPS, we will also create two additional composite APCs for extended assessment and management, of which observation care is a major component. This refinement of the third alternative responds to commenters who stated that observation care is sometimes a major component of a patient's visit. We continue to believe that observation services are usually ancillary and supportive to the other independent services that are provided to the patient on the same day. However, we believe that observation

care may sometimes rise to the level of a major component service, specifically, when it is provided for 8 hours or more in association with a high level clinic or emergency department visit, direct admission to observation, or critical care services and it is not provided in conjunction with a surgical procedure. Therefore, we have created two composite APCs that will provide payment to hospitals in certain circumstances when extended assessment and management of a patient occur. These composite APCs describe an extended encounter for care provided to a patient. Specifically, we are creating two new composite APCs for CY 2008, APC 8002 (Level I Extended Assessment and Management Composite) and APC 8003 (Level II Extended Assessment and Management Composite). The payment associated with APCs 8002 and 8003 is intended to pay the hospital for the costs associated with a single episode of care involving more intense extended assessment and management that includes a high level clinic or emergency department visit, direct admission to observation, or critical care services; 8 hours or more of observation services; and any associated packaged services.

In summary, for CY 2008, payment for observation services will remain packaged with a status indicator "N." We are creating two composite APCs for extended assessment and management, of which observation care is a major component service. When criteria for payment of one of the composite APCs are met, separate payment will be made to the hospital through the composite APC. This composite APC payment methodology will contribute to our goal of providing payment under the OPPS for a larger bundle of component services provided in a single hospital outpatient encounter, creating additional hospital incentives for efficiency and cost containment, while providing hospitals with the most flexibility to manage their resources.

(8) Composite APCs

We are establishing five composite APCs for the CY 2008 OPPS. In addition to the two composite APCs that we proposed for the CY 2008 OPPS and for which we discuss the alternatives considered in this section, we have also created two composite APCs for extended assessment and management (of which observation care is a part), and we identify APC 0034 (Mental Health Services Composite), the longstanding limit on per diem payment for mental health services, as a composite APC. We refer readers to the discussion of alternatives considered for

observation services, above, and to section II.A.4.c.(7) of this final rule with comment period for further discussion of the composite APCs of which observation is a part. We refer readers to section II.A.4.d. of this final rule with comment period for a discussion of APC 0034.

A composite APC is an APC that provides a single payment for several independent services when they are furnished on the same date of service. Composite APCs are intended to establish APC payment rates for combinations of services that are frequently furnished together so that the multiple procedure claims on which they are submitted may be used to set the payment rates for them and so that the payment for the services provides greater incentives for efficient use of hospital resources. Specifically, as proposed, we are establishing composite APC 8000 for low dose rate prostate brachytherapy (which will be paid when CPT codes 55875 (Transperineal placement of needles or catheters into prostate for interstitial radioelement application, with or without cystoscopy) and 77778 (Interstitial radiation source application; complex) are billed on the same date of service) and APC 8001 for cardiac electrophysiologic evaluation and ablation services (which will be paid when at least one designated cardiac electrophysiologic evaluation service is billed on the same date as at least one designated cardiac ablation service). We refer readers to sections II.A.4.d.(2) and II.A.4.d.(3) of this final rule with comment period for a detailed discussion of the policies for these APCs. We note that we will continue to pay individual services under their single procedure APCs as we have in the past, in those clinical circumstances in which the combinations of services proposed for payment through the composite APCs are not furnished on the same date. We considered two alternatives with regard to creating composite APCs.

The first alternative we considered was to make no change to how we pay for these services. If we were to make no change, we could continue to pay separately for each service. We did not select this alternative because the payment rates would continue to be based on single procedure claims, which we have been told by stakeholders do not represent the typical treatment scenario. Interested parties have repeatedly told us, and our examination of claims data supports, that these services are typically furnished in combination with one another and, therefore, this may suggest that the use of single procedure claims

to establish the median costs that form the basis for payment for these services may result in our using clinically unusual or incorrectly coded claims as the basis for payment.

The second alternative we considered, and the alternative we selected, is to create composite APCs for these services, which are commonly furnished in combination with one another, and to make a single payment for the multiple services specified in the composite APC at a prospectively established rate based on the total cost of the combination of services furnished. This alternative responds to public comments that multiple procedure claims for these services that we have heretofore been unable to use for ratesetting reflect the most common treatment scenarios. It also provides additional incentives for efficient provision of services by bundling payment for multiple services into a single payment. Composite APCs enable us to use more of our claims data and to use single procedure claims only to set payment rates for the uncommon circumstances in which a particular service is not furnished in combination with other related independent services. Therefore, we are establishing composite APCs 0034, 8000, 8001, 8002, and 8003 for the CY 2008 OPPIs.

b. Partial Device Credits

We are reducing payment by 50 percent of the device offset amount for specified APCs when hospitals report that they have received a credit for a replacement device of greater than or equal to 50 percent of the cost of the new replacement device being implanted, if the device is on a list of specified devices. We refer readers to section IV.A.3. of this final rule with comment period for a complete discussion of this final policy. This is an extension of the current policy that reduces the APC payment by the full device offset amount when the hospital receives a replacement device without cost or receives a credit for the full cost of the device being replaced. We considered several alternatives in developing this partial device credit policy for CY 2008.

The first alternative we considered was to make no change to the current policy. Under this alternative, Medicare and the beneficiary would continue to pay the full APC rate, which is calculated using only claims for which the full cost of a device is billed by the hospital, even if the hospital received a substantial credit towards the cost of the replacement device. We did not select this alternative because we believe that, as long as the APC payment amount is initially established to reflect the full

cost of the device when there is no credit, there should be a reduction in the Medicare payment amount when the hospital receives a substantial credit toward cost of the replacement device. Similarly, we believe that the beneficiary cost sharing should be based on an amount that also reflects the credit.

The second alternative we considered was to extend the current policy to cases of partial credit without change. This would reduce the payment in all cases in which the hospital received a credit by the full offset amount for the APC, that is, by 100 percent of the estimated device cost contained in the APC. We considered this alternative because, in our discussions with hospitals about partial credits for devices, they advised us that hospitals generally charge the same amount for a device regardless of whether they receive a significant amount in credit towards the cost of that device. Hence, in such a case the costs that are packaged into the APC payment for the applicable procedure contain the same amount of device cost as if the hospital incurred the full cost of the device. We did not select this alternative because we did not believe it was appropriate to reduce the payment to the hospital by the full cost of a device if the hospital only received a partial credit, and not a full credit, towards the cost of the device.

The third alternative we considered was to reduce the APC payment by 50 percent of the offset amount (that would be applied if the hospital received full credit) in cases in which the hospital receives a partial credit of 20 percent or more of the cost of the new replacement device being implanted. We would require hospitals to report a new modifier when the hospital receives a partial credit that is 20 percent or more of the cost of the device being replaced. We are not adopting this policy, which we proposed in the CY 2008 OPPI/ASC proposed rule, for several reasons. We note it would not be consistent with the FY 2008 IPPIs partial credit device policy, and we were concerned that 20 percent is a nominal portion of the cost of a device and would not justify the administrative and operational burden posed by the policy and, accordingly, the 50-percent payment reduction would be more than the partial credit received in some cases.

The fourth alternative, which we are adopting, is a modification of the third alternative described above. This alternative is to reduce the APC payment by 50 percent of the offset amount (that would be applied if the hospital received full credit) in cases in which the hospital receives a partial

credit of 50 percent or more of the cost of the new replacement device being implanted. We are requiring hospitals to report the "FC" modifier when the hospital receives a partial credit that is 50 percent or more of the cost of the device being replaced. We are adopting this alternative because we believe that this approach provides an appropriate and equitable payment to the hospital from Medicare and, depending on the service, may reduce the beneficiary's cost sharing for the service.

c. Brachytherapy Sources

Pursuant to sections 1833(t)(2)(H) and 1833(t)(16)(C) of the Act, we paid for brachytherapy sources furnished from January 1, 2004 through December 31, 2006, on a per source basis at an amount equal to the hospital's charge adjusted to cost by application of the hospital-specific overall CCR. Moreover, pursuant to section 107(a) of the MIEA-TRHCA, which amended section 1833(t)(16)(C) of the Act by extending the payment period for brachytherapy sources based on a hospital's charges adjusted to cost, we are paying for brachytherapy sources using the charges adjusted to cost methodology through December 31, 2007. Section 107(b)(1) of the MIEA-TRHCA amended section 1833(t)(2)(H) of the Act, by adding a requirement for the establishment of separate payment groups for "stranded and non-stranded" brachytherapy devices beginning July 1, 2007. In section VII.B. of this final rule with comment period, we are adopting prospective payment for all brachytherapy sources under the CY 2008 OPPIs, including separate payment for stranded and non-stranded versions of sources currently known to us, that is, iodine-125, palladium-103 and cesium-131. For each of the sources for which we have information that only non-stranded source versions are marketed, we are making payment based on the median cost per source based on our CY 2006 claims data. For sources for which we have information that both stranded and non-stranded versions are marketed and for which our CY 2006 billing codes do not differentiate stranded and non-stranded sources, we are basing payment for stranded and non-stranded brachytherapy sources on the 60th percentile and 40th percentile of our claims data, respectively, for CY 2008. We discuss each alternative we considered below.

The first alternative we considered was to pay for each source of brachytherapy based on our CY 2006 median costs, with the exception of the 3 sources for which we do not have separately reported cost data for their

stranded and non-stranded versions, that is, iodine-125, palladium-103, and cesium-131. Under this option, for these six stranded and non-stranded sources, we considered payment based on hospital charges reduced to cost for CY 2008. This approach would be a step toward prospective payment for brachytherapy sources, as the sources that only have non-stranded versions would receive prospective payment consistent with the overall OPPS methodology. However, payment for stranded and non-stranded iodine-125, palladium-103 and cesium-131 would deviate from the overall OPPS framework for prospective payment and from the prospective payment of the non-stranded only sources specifically. This approach would subject similar items that are essential to brachytherapy treatments to different payment methodologies and could potentially create financial incentives for the use of some products over others.

The second alternative we considered was to continue making payments for all sources based on hospital charges reduced to cost. Although hospitals are familiar with this payment methodology and this methodology would be consistent with the requirement that brachytherapy sources be paid separately, we believe that to continue to pay on this basis would be inconsistent with the general methodology of a prospective payment system and would provide no incentive for hospitals to provide brachytherapy treatments in the most cost-effective and clinically advantageous manner.

The third alternative we considered, and the alternative we selected, is to provide prospective payment for each brachytherapy source based on its median costs. For the sources which only have non-stranded versions, we are using our standard median cost methodology. For the 3 sources that have stranded and non-stranded versions and for which we do not yet have separately reported stranded and non-stranded claims data, we are calculating the median costs based on the assumption that the reportedly lower cost non-stranded sources would be unlikely to be in the top 20 percent of the cost distribution of our aggregate CY 2006 claims data for each respective source, and on the assumption that the reportedly higher cost stranded sources would be unlikely to be in the bottom 20 percent of the CY 2006 cost distribution for each source. This approach to calculating median costs for stranded and non-stranded iodine-125, palladium-103, and cesium-131 sources results in Medicare payment rates based on the 60th percentile of our aggregate

data for stranded sources and the 40th percentile of our aggregate data for non-stranded sources. This methodology provides for separate payment of all sources, including stranded and non-stranded sources, recognizes a cost differential between stranded and non-stranded sources, is consistent with our prospective payment methodology for setting payment rates for other services, and is consistent with the expiration of the requirement of the MIEA–TRHCA that payment for brachytherapy sources be made at charges reduced to cost through December 31, 2007.

2. Limitations of Our Analysis

The distributional impacts presented here are the projected effects of the policy changes on various hospital groups. We post our hospital-specific estimated payments for CY 2008 with the other supporting documentation for this final rule with comment period. To view the hospital-specific estimates, we refer readers to the Web site at: <http://www.cms.hhs.gov/HospitalOutpatientPPS/>. Select “regulations and notices” from the left side of the page and then select CMS–1392–FC from the list of regulations and notices. The hospital-specific file layout and the hospital-specific file are listed with the other supporting documentation for this final rule with comment period. We show hospital-specific data only for hospitals whose claims were used for modeling the impacts shown in Table 61. We do not show hospital-specific impacts for hospitals whose claims we were unable to use. We refer readers to Section II.A.2. of this final with comment period for a discussion of the hospitals whose claims we do not use for ratesetting and impact purposes.

We estimate the effects of individual policy changes by estimating payments per service, while holding all other payment policies constant. We use the best data available but do not attempt to predict behavioral responses to our policy changes. In addition, we do not make adjustments for future changes in variables such as service volume, service-mix, or number of encounters. As we have done in previous rules, we solicited comments and information about the anticipated effect of the changes on hospitals and our methodology for estimating them. We discuss below several specific limitations of our analysis.

One limitation of our analysis is our inability to estimate behavioral responses to our increase in packaging and our payment for multiple procedures based on one composite payment rate. Specifically, it is possible

that there could be a behavioral response to our final policy to package payment for guidance services, image processing services, intraoperative services, imaging supervision and interpretation services, diagnostic radiopharmaceuticals, contrast agents, and observation services, and to pay for certain services through composite APCs when the services are furnished in specified combinations. However, we are unable to estimate what the effect of possible behavioral responses may be on payment to hospitals. We refer readers to section II.A.4. of this final rule with comment period for further discussion of the packaging approach. The purpose of packaging these services and creating composite APCs is to remove financial incentives to furnish additional services and, instead, to provide greater incentives for hospitals to assess the most cost-effective and appropriate means to furnish necessary services. In addition, we expect that hospitals will negotiate for lower prices from suppliers to maximize the margin between their cost of providing services and the Medicare payment for the services. We recognize that it is also possible that hospitals could change behavior in a manner that seeks to overcome any reductions in total payments by ceasing to provide certain packaged services on the same date of service and instead requiring patients to receive those services on different dates of service or at different locations, so as to either receive separate additional payment for services that would otherwise be packaged or to not incur the additional costs of those services. However, we believe that this will be uncommon for several reasons. We anticipate that hospitals will continue to provide care that is aligned with the best interests of the patient. In the vast majority of cases for the services that are newly unconditionally packaged in CY 2008, the services need to be provided in the same facility and during the same encounter as the independent procedure they support. Furthermore, in the case of conditionally packaged services, we note that the supportive services that we have included in our packaging policies are typically services that are provided during or shortly preceding the independent procedure to which they are ancillary and supportive, and thus it is unlikely that the supportive service that is packaged and the independent procedure will be performed in different locations. However, we are unable to quantify the extent to which such behavioral change may impact Medicare payments to hospitals.

Secondly, we are not able to estimate the impact on hospitals of our policy to reduce payment when a hospital receives a partial credit for a medical device that fails while under warranty or otherwise. We do not currently require hospitals to notify us when they received a partial credit for a device for which they are billing. In addition, hospitals have informed us that hospitals generally do not currently reduce the charge for a device when they receive a partial credit toward the device for which they are billing Medicare. Therefore, we have no means of knowing the frequency with which this happens or the extent to which hospitals' costs for the devices being replaced are reduced as a result of the partial credits and cannot estimate the impact of the policy on hospital payments under the OPPTS in CY 2008.

Third, we are unable to estimate the extent to which hospitals will incur no cost for devices or will receive full or partial credits for devices being replaced as a result of the failure of the device. In CY 2006, hospitals reported the "FB" modifier on codes for devices that they received without cost or for which they received a full credit. However, we are unable to forecast the extent to which the frequency or the type of device for which this occurred in CY 2006 will recur for CY 2008. We believe that most of these occurrences were the result of specific activity that we have no reason to believe will occur in CY 2008 at the same frequency at which it occurred in CY 2006, and hence we have made no estimates of how such activity may impact payments to hospitals. Similarly, we have no estimate of the extent to which hospitals will receive partial credits for devices under warranty actions in CY 2008. Beginning January 1, 2008, hospitals will report cases in which they receive a partial credit for a device if the credit is 50 percent or more of the cost of the replacement device. However, these data will not be available until the development of the CY 2010 OPPTS, which will be based on CY 2008 claims.

Fourth, for purposes of this impact analysis, for those brachytherapy sources with new codes to distinguish between stranded and non-stranded version, we assume that half of the brachytherapy sources that hospitals will use in CY 2008 will be stranded sources and that half of them will be non-stranded sources. The statute requires us to pay for stranded and non-stranded sources through different APC groups, but given the lack of separately reported claims data for stranded and non-stranded sources, for the purposes of this impact analysis, we make this

assumption. In the CY 2008 OPPTS/ASC proposed rule, we welcomed data that would provide the expected CY 2008 ratio of stranded sources to non-stranded sources for purposes of this CY 2008 final rule impact analysis. We did not receive any information regarding the ratio of stranded to non-stranded sources in the public comments on the proposed rule.

The final limitation of our analysis is that we cannot predict the utilization of new CY 2007 and CY 2008 CPT codes that replace existing CY 2006 CPT codes for which we have cost data on which we base the CY 2008 OPPTS payment rates. In years past, we have estimated the impact of these code changes as if the deleted codes would continue to exist for the applicable year for which we were estimating impacts. For this final rule with comment period, we applied the AMA's estimates of new code utilization which are used for the MPFS final rule with comment period. However, we do not know whether these estimates of physician utilization are equally applicable to hospital outpatient services.

In the CY 2008 OPPTS/ASC proposed rule, we requested comments regarding whether it would be appropriate for us to use the AMA estimates of utilization for new codes in the estimation of the impact of the final CY 2008 payments for hospitals. We received no comments on this issue.

3. Estimated Impacts of This Final Rule With Comment Period on Hospitals and CMHCs

Table 61 below shows the estimated impacts of this final rule with comment period on hospitals. Historically, the first line of the impact table, which estimates the change in payments to all hospitals, has always included cancer and children's hospitals, which are held harmless to their pre-BBA payment to cost ratio. This year, for the first time, we are also including CMHCs in the first line that includes all providers because we included CMHCs in our weight scaler estimate. We are not showing the estimated impact of the changes on CMHCs alone because CMHCs bill only one service under the OPPTS, partial hospitalization, and each CMHC can easily estimate the impact of the changes by referencing payment for APC 0033 (Partial Hospitalization) in Addendum A to this final rule with comment period. As discussed in section II.B. of this final rule with comment period, the payment for APC 0033 (Partial Hospitalization) for CY 2008 will decline by 13 percent compared to the payment for APC 0033 for CY 2007.

The estimated increase in the total payments made under the OPPTS is limited by the increase to the conversion factor set under the methodology in the statute. The distributional impacts presented do not include assumptions about changes in volume and service-mix. The enactment of Public Law 108-173 on December 8, 2003, provided for the additional payment outside of the budget neutrality requirement for wage indices for specific hospitals reclassified under section 508. The amounts attributable to this reclassification are incorporated into the CY 2007 estimates but because section 508 expired for CY 2008 rates, no additional payments under section 508 are considered for CY 2008 in this impact analysis.

Table 61 shows the estimated redistribution of hospital and CMHC payments among providers as a result of APC reconfiguration and recalibration including the expansion of packaging; wage indices, and continuation of the adjustment for rural SCHs and EACHs with extension to brachytherapy sources in CY 2008; the estimated distribution of increased payments in CY 2008 resulting from the combined impact of the APC recalibration with the expansion of packaging, wage effects, the rural SCH and EACH adjustment, and the market basket update to the conversion factor; and, finally, estimated payments considering all payments for CY 2008 relative to all payments for CY 2007, including the impact of expiring wage provisions of section 508, changes in the outlier threshold, and changes to the pass-through estimate. Because updates to the conversion factor, including the update of the market basket and the addition of money not dedicated to pass-through payments, are applied uniformly, observed redistributions of payments in the impact table for hospitals largely depend on the mix of services furnished by a hospital (for example, how the APCs for the hospital's most frequently furnished services would change), the impact of the wage index changes on the hospital, and the impact of the payment adjustment for rural SCHs, including EACHs. However, total payments made under this system and the extent to which this final rule with comment period will redistribute money during implementation also would depend on changes in volume, practice patterns, and the mix of services billed between CY 2007 and CY 2008, which CMS cannot forecast.

Overall, the final OPPTS rates for CY 2008 will have a positive effect for providers paid under the OPPTS,

resulting in a 3.6 percent increase in Medicare payments. Removing cancer and children's hospitals because their payments are held harmless to the pre-BBA ratio between payment and cost, and CMHCs, suggests that changes will result in a 3.8 percent increase in Medicare payments to all other hospitals, exclusive of transitional pass-through payments.

To illustrate the impact of the final CY 2008 changes, our analysis begins with a baseline simulation model that uses the final CY 2007 weights, the FY 2007 final post-reclassification IPPS wage indices, and the final CY 2007 conversion factor. Column 2 in Table 61 shows the independent effect of changes resulting from the reclassification of services among APC groups, the recalibration of APC weights and the changes to packaging that we adopted for this final rule with comment period, based on 12 months of CY 2006 hospital OPPS claims data and more recent cost report data. We modeled the effect of APC recalibration and packaging changes for CY 2008 by varying only the weights (the final CY 2007 weights versus the estimated CY 2008 weights including expanded packaging in our baseline model) and calculating the percent difference in payments. Column 2 also reflects the effect of changes resulting from the APC reclassification and recalibration changes and changes in multiple procedure discount patterns that occur as a result of the changes to packaging. When services are packaged, the resulting median costs at the HCPCS code level often change, requiring migration of HCPCS codes to different APCs to address violations of the 2 times rule (that is, to ensure that the HCPCS codes within the APC remain homogeneous with regard to clinical and resource characteristics). The placement of the HCPCS code in a new APC as a result of the effect of the packaging approach often changes the APC median cost. Furthermore, changing the cost of a service subject to the multiple procedure discount policy, as well as packaging some services previously subject to the multiple procedure discount policy, changes the relative weight ranking of services on a claim subject to the multiple procedure discount policy, significantly changing discounting patterns in some cases.

Column 3 reflects the independent effects of updated wage indices, including the new occupational mix data described in the FY 2008 IPPS final rule, and the 7.1 percent rural adjustment for SCHs and EACHs with extension to brachytherapy sources. The OPPS wage index for CY 2008 includes the budget neutrality adjustment for the

rural floor, as discussed in section II.D. of this final rule with comment period. We modeled the independent effect of updating the wage index and the rural adjustment by varying only the wage index, using the CY 2008 scaled weights, and a CY 2007 conversion factor that included a budget neutrality adjustment for changes in wage effects and the rural adjustment between CY 2007 and CY 2008.

Column 4 demonstrates the combined "budget neutral" impact of APC recalibration with the packaging policy (that is, Column 2), the wage index update and the adjustment for rural SCHs and EACHs (that is, Column 3), as well as the impact of updating the conversion factor with the market basket update. We modeled the independent effect of the budget neutrality adjustments and the market basket update by using the weights and wage indices for each year, and using a CY 2007 conversion factor that included the market basket update and budget neutrality adjustments for differences in wages and the adjustment for rural SCHs and EACHs.

Finally, Column 5 depicts the full impact of the CY 2008 policy on each hospital group by including the effect of all the changes for CY 2008 (including the APC reconfiguration and recalibration with the packaging changes shown in Column 2) and comparing them to all estimated payments in CY 2007, including changes to the wage index under section 508 of Public Law 108 173. Column 5 shows the combined budget neutral effects of Columns 2 through 4, plus the impact of the change to the fixed outlier threshold from \$1,825 to \$1,575, expiring section 508 reclassification wage index increases, and the impact of reducing the percentage of total payments dedicated to transitional pass-through payments. We estimate that these cumulative changes increase payments by 3.6 percent. We modeled the independent effect of all changes in Column 5 using the final weights for CY 2007 and the final weights for CY 2008. We used the final conversion factor for CY 2007 of \$61.468 and the final CY 2008 conversion factor of \$63.694. Column 5 also contains simulated outlier payments for each year. We used the charge inflation factor used in the FY 2008 IPPS final rule of 6.2 percent (1.062) to increase individual costs on the CY 2006 claims to reflect CY 2007 dollars, and we used the most recent overall CCR in the July 2007 Outpatient Provider-Specific File. Using the CY 2006 claims and a 6.2 percent charge inflation factor, we currently estimate that outlier payments for CY 2007, using

a multiple threshold of 1.75 and a fixed-dollar threshold of \$1,825 would be approximately 0.73 percent of total payments. Outlier payments of 0.73 percent appear in the CY 2007 comparison in Column 5. We used the same set of claims and a charge inflation factor of 12.78 percent (1.1278) and the CCRs on the July 2007 Outpatient Provider-Specific File, with an adjustment of 1.0027 to reflect relative changes in cost and charge inflation between CY 2006 and CY 2008, to model the CY 2008 outliers at 1.0 percent of total payments using a multiple threshold of 1.75 and a fixed dollar threshold of \$1,575.

Column 1: Total Number of Hospitals

The first line in Column 1 in Table 61 shows the total number of providers (4,250), including cancer and children's hospitals and CMHCs for which we were able to use CY 2006 hospital outpatient claims to model CY 2007 and CY 2008 payments by classes of hospitals. We excluded all hospitals for which we could not accurately estimate CY 2007 or CY 2008 payment and entities that are not paid under the OPPS. The latter entities include CAHs, all-inclusive hospitals, and hospitals located in Guam, the U.S. Virgin Islands, Northern Mariana Islands, American Samoa, and the State of Maryland. This process is discussed in greater detail in section II.A. of this final rule with comment period. At this time, we are unable to calculate a disproportionate share (DSH) variable for hospitals not participating in the IPPS. Hospitals for which we do not have a DSH variable are grouped separately and generally include psychiatric hospitals, rehabilitation hospitals, and LTCHs. We show the total number (3,984) of OPPS hospitals, excluding the hold-harmless cancer and children's hospitals, and CMHCs, on the second line of the table. We excluded cancer and children's hospitals because section 1833(t)(7)(D) of the Act permanently holds harmless cancer hospitals and children's hospitals to a proportion of their pre-BBA payment relative to their pre-BBA costs and, therefore, we removed them from our impact analyses. We excluded CMHCs because they only bill one service under the OPPS, and thus they can easily determine the impact of the changes.

Column 2: APC Changes Due to Reassignment, Recalibration and Packaging

This column shows the combined effects of reconfiguration, recalibration, finalizing the packaging proposal and other policies (for example, changes to

payment for brachytherapy sources and therapeutic radiopharmaceuticals). In many cases, the redistribution created by the reduction in the partial hospitalization payment offsets other recalibration losses. Specifically, the reduction in partial hospitalization payment is redistributed to hospitals and reflected in the 0.2 percent increase for the 3,984 hospitals that remain after excluding hospitals held harmless and CMHCs. Overall, these changes will increase payments to urban hospitals by 0.3 percent. We estimate that large urban hospitals will see an increase of 0.1 percent and other urban hospitals will see a 0.4 percent increase in payments attributable to all recalibration.

Overall, rural hospitals will show a modest 0.2 percent decrease as a result of changes to the APC structure and the expansion of packaging. Rural hospitals of all bed sizes will experience no change or will experience decreases ranging from 0.1 to 0.6 percent. The declines for rural hospitals for this final rule with public comment period compared to the projected increases of 0.2 to 0.6 for rural hospitals in the proposed rule is attributable to the changes in packaging that we made as a result of public comments with regard to observation and imaging supervision and interpretation services. The proposed packaging of these services into payment for any service with a status indicator of "S," "T," "V," or "X" would have increased OPPS payments for visits and other services provided in rural hospitals. However, in response to public comments, we created composite APCs for extended assessment and management involving significant observation stays and we are packaging imaging supervision and interpretation services only into services with a status indicator of "T." The services for which the median costs are increased as a result of these final policies are performed more often in urban hospitals than in rural hospitals, and this utilization is reflected in the negative percents in Column 2.

Among teaching hospitals, the largest observed impacts resulting from APC recalibration and the expansion of packaging include an increase of 0.2 percent for major teaching hospitals and an increase of 0.4 percent for minor teaching hospitals.

Classifying hospitals by type of ownership suggests that proprietary hospitals will see an increase of 0.3 percent while governmental and voluntary hospitals will each see an increase of 0.2 percent.

We note also that both low volume urban and rural hospitals with less than

5,000 lines and hospitals for which DSH payments are not available will experience decreases of 3.7 to 5.5 percent as a result of the decline in payment for partial hospitalization from CY 2007 to CY 2008. These declines are somewhat moderated in Column 5 as a result of the increased outlier payments that result from the lower payment rates.

Column 3: New Wage Indices and the Effect of the Rural Adjustment

This column estimates the impact of applying the final IPPS FY 2008 wage indices for CY 2008, continuing the rural adjustment for CY 2008, and extending the rural adjustment to include brachytherapy sources. Overall, these changes will not change the payments to urban hospitals. Overall, rural hospitals show a decrease of 0.1 percent.

Among teaching hospitals, the largest observed impacts resulting from changes to the wage indices and the continuation of the rural adjustment include a decrease of 0.1 percent for major teaching hospitals and no change for minor teaching hospitals.

Classifying hospitals by type of ownership suggests that proprietary hospitals will gain 0.1 percent and that governmental hospitals and voluntary hospitals will each experience no change.

Column 4: All Budget Neutrality Changes and Market Basket Update

The addition of the market basket update of 3.3 percent alleviates any negative impacts on payments for CY 2008 created by the budget neutrality adjustments made in Columns 2 and 3, with the exception of urban and rural hospitals with the lowest volume of services and hospitals not paid under the IPPS, including psychiatric hospitals, rehabilitation hospitals, and long term care hospitals (DSH not available). In general, all hospitals see an increase of 3.5 percent, attributable to the 3.3 percent market basket increase and the 0.2 percent increase in payment weight created by the reduction in payment for partial hospitalization that is then redistributed to other services.

Overall, these changes will increase payments to urban hospitals by 3.6 percent. We estimate that large urban hospitals will see an increase of 3.5 percent and other urban hospitals will see a 3.7 percent increase. In contrast, small urban hospitals that bill fewer than 5,000 lines per year will experience a decrease in payment of 0.4 percent, largely as a result of the decrease in payment for partial

hospitalization and mental health services appearing in Column 2.

Overall, rural hospitals show a 3.0 percent increase as a result of the market basket update. Rural hospitals that bill less than 5,000 lines will see a 1.8 percent decrease, also as a result of decreases in payment for partial hospitalization appearing in Column 2. Rural hospitals that bill more than 5,000 lines will experience increases of 2.8 to 3.5 percent.

Among teaching hospitals, the observed impacts resulting from the market basket update include an increase of 3.6 percent for minor teaching hospitals and an increase of 3.3 percent for major teaching hospitals.

Classifying hospitals by type of ownership suggests that proprietary hospitals will increase 3.8 percent and governmental and voluntary hospitals will experience an increase of 3.5 percent.

Column 5: All Changes for CY 2008

Column 5 compares all changes for CY 2008 to final payment for CY 2007 and includes the expired section 508 reclassification wage indices, the change in the outlier threshold, and the difference in pass through estimates which are not included in the combined percentages shown in Column 4. Overall, we estimate that providers will see an increase of 3.6 percent under this final rule with comment period in CY 2008 relative to total spending in CY 2007. The 3.6 percent increase for all providers in Column 5, which is rounded from 3.56 percent, reflects the 3.3 percent market basket increase, plus 0.12 percent for the change in the pass-through estimate between CY 2007 and CY 2008, plus 0.27 percent for the difference in estimated outlier payments between CY 2007 (0.73 percent) and CY 2008 (1.0 percent), less 0.13 percent for the expired section 508 wage payments. When we exclude cancer and children's hospitals (which are held harmless to their pre-OPPS costs), and CMHCs, the gain becomes 3.8 percent.

The combined effect of all changes for CY 2008 will increase payments to urban hospitals by 3.9 percent. We estimate that large urban hospitals will see a 3.9 percent increase, while "other" urban hospitals will experience an increase of 3.8 percent. Urban hospitals that bill less than 5,000 lines will experience an increase of 0.8 percent, up from the 0.4 percent decrease in Column 4 due to increases in outlier payments for partial hospitalization.

Overall, rural hospitals will show a 3.1 percent increase as a result of the combined effects of all changes for CY 2008. Rural hospitals will experience a

lower increase than the 3.8 percent overall hospital increase as a result of the combined effects of the changes to the packaging policies that were made in response to public comments and the expiration of the section 508 reclassification wage indices. Rural hospitals that bill less than 5,000 lines experience a decrease of 1.5 percent, which is less than the 1.8 percent

decrease in Column 4 due to an increase in outlier payments for partial hospitalization. All rural hospitals that bill greater than 5,000 lines experience increases ranging from 2.9 percent to 3.7 percent.

Among teaching hospitals, the largest observed impacts resulting from the combined effects of all changes include an increase of 3.8 percent for major

teaching hospitals and minor teaching hospitals.

Classifying hospitals by type of ownership suggests that proprietary hospitals will gain 4.1 percent, governmental hospitals will experience an increase of 3.9 percent, and voluntary hospitals will experience an increase of 3.7 percent.

TABLE 61.—IMPACT OF CHANGES FOR CY 2008 HOSPITAL OUTPATIENT PROSPECTIVE PAYMENT SYSTEM

| | Number of hospitals | APC changes | New wage index and rural adjust- ment | Combined (cols 2,3) with market basket up- date | All changes |

| Government | 588 | 0.2 | 0.0 | 3.5 | 3.9 |

Column (1) shows total hospitals.

Column (2) shows the impact of changes resulting from the reclassification of HCPCS codes among APC groups and the recalibration of APC weights based on 2006 hospital claims data.

Column (3) shows the budget neutral impact of updating the wage index and rural adjustment by applying the FY 2008 hospital inpatient wage index and extended to rural adjustment to brachytherapy sources.

Column (4) shows the impact of all budget neutrality adjustments and the addition of the market basket update.

Column (5) shows the additional adjustments to the conversion factor resulting from a change in the pass-through estimate, and adds outlier payments. The change in outlier payments reflects a decrease in the fixed dollar threshold resulting from updated claim, CCR, and inflation estimates. This column also shows the impact of the expired section 508 wage reclassification, which ended on September 30, 2007.

* These 4,250 providers include children and cancer hospitals, which are held harmless to pre-BBA payments, and CMHCs.

** Complete DSH numbers are not available for providers that are not paid under IPPS, including rehabilitation, psychiatric, and long-term care hospitals.

*** Section 1833(t)(7)(D) of the Act specifies that rural hospitals with 100 or fewer beds (that are not also SCHs) receive additional payment for covered hospital outpatient services furnished during CY 2008 for which the prospective payment system amount is less than the pre-BBA amount. The amount of payment is increased by 85 percent of the difference for CY 2008.

4. Estimated Effect of This Final Rule With Comment Period on Beneficiaries

For services for which the beneficiary pays a copayment of 20 percent of the payment rate, the beneficiary share of payment will increase for services for which the OPPS payments will rise and will decrease for services for which the OPPS payments will fall. For example, for an electrocardiogram (APC 0099), the minimum unadjusted copayment in CY 2007 was \$4.66. In this final rule with comment period, the minimum unadjusted copayment for APC 0099 is \$4.96 because the OPPS payment for the service will increase under this final rule with comment period. In another example, for a service assigned to Level IV Needle Biopsy/Aspiration Except Bone Marrow (APC 0037) in the CY 2007 OPPS, the national unadjusted copayment was \$228.76, and the minimum unadjusted copayment was \$126.20. In this final rule with comment period, the national unadjusted copayment for APC 0037 is \$228.76, the same national unadjusted copayment in

effect for CY 2007. The minimum unadjusted copayment for APC 0037 is \$172.95, or 20 percent of the payment for APC 0037. The minimum unadjusted copayment will rise because the payment rate for APC 0037 will rise. In all cases, the statute limits beneficiary liability for copayment for a service to the inpatient hospital deductible for the applicable year. For CY 2008, the inpatient deductible is \$1,024.

In order to better understand the impact of changes in copayment on beneficiaries, we modeled the percent change in total copayment liability using CY 2006 claims. We estimate, using the claims of the 4,250 hospitals and CMHCs on which our modeling is based, that total beneficiary liability for copayments will decline as an overall percentage of total payments from 26.5 percent in CY 2007 to 25.1 percent in CY 2008. This estimated decline in beneficiary liability is a consequence of the APC recalibration and reconfiguration we are making for CY 2008.

With respect to partial hospitalization, the copayment in CY 2007 of \$46.95 will decline to \$41.03 under this final rule with comment period as a result of the decline in the per diem payment for partial hospitalization from \$234.73 in CY 2007 to \$205.16 for CY 2008.

5. Conclusion

The changes in this final rule with comment period will affect all classes of hospitals. Some classes of hospitals experience significant gains and others less significant gains, but almost all classes of hospitals will experience positive updates in OPPS payments in CY 2008. Table 61 demonstrates the estimated distributional impact of the OPPS budget neutrality requirements and an additional 3.6 percent increase in payments for CY 2008, after considering all changes to APC reconfiguration and recalibration, including those resulting from the expansion of packaging and the payment for brachytherapy sources on a prospective payment basis, as well as

the market basket increase, and the estimated cost of outliers and changes to the pass through estimate. The accompanying discussion, in combination with the rest of this final rule with comment period constitutes a regulatory impact analysis.

6. Accounting Statement

As required by OMB Circular A-4 (available at <http://www.whitehouse.gov/omb/circulars/a004/a-4.pdf>), in Table 62, we have prepared an accounting statement showing the CY 2008 estimated hospital

OPPS incurred benefit impact associated with the CY 2008 outpatient hospital market basket update shown in this final rule with comment period, based on the Mid-Session Review of the FY 2008 President's Budget baseline. All estimated impacts are classified as transfers.

TABLE 62.—ACCOUNTING STATEMENT: CY 2008 ESTIMATED HOSPITAL OPPS INCURRED BENEFIT IMPACT ASSOCIATED WITH THE CY 2008 HOSPITAL OUTPATIENT MARKET BASKET UPDATE
[In billions]

| Category | Transfers |
|--------------------------------------|---|
| Annualized Monetized Transfers | \$0.9. |
| From Whom To Whom? | Federal Government to outpatient hospitals and other providers who receive payment under the hospital OPPS. |

C. Effects of ASC Payment System Changes in This Final Rule With Comment Period

On August 2, 2007, we published in the **Federal Register** the final rule for the revised ASC payment system, effective January 1, 2008 (72 FR 42470). In that final rule for the revised ASC payment system, we adopted the methodologies we will use to set payment rates for ASC services furnished in association with covered surgical procedures and covered ancillary procedures beginning January 1, 2008, and established that the OPPS relative payment weights will be used as the basis for the payment of most covered surgical procedures and covered ancillary services under the revised ASC payment system.

In the August 2, 2007 revised ASC payment system final rule, we established that we will update the ASC payment system annually as part of the OPPS rulemaking cycle. As part of the annual OPPS rulemaking cycle, we indicated we will update the lists of ASC covered surgical procedures and covered ancillary services, as well as their payment rates. Such an update is very important because the OPPS relative payment weights will be used as the basis for the payment of most covered surgical procedures and covered ancillary services under the revised ASC payment system. This joint update process will ensure that the ASC updates occur in a regular, predictable, and timely manner, and that the ASC payment rates immediately reflect the updated OPPS relative payment weights.

In the CY 2008 OPPS/ASC proposed rule, we proposed to update the revised ASC payment system for CY 2008 to reflect the CY 2008 OPPS relative payment weights and rates, as well as update the lists of covered surgical and

covered ancillary services (72 FR 42778). We also proposed to revise the regulations to make practice expense payment to physicians who perform noncovered ASC procedures in ASCs based on the MPFS facility PE RVUs (72 FR 42791) and to exclude covered ancillary radiology services and covered ancillary drugs and biologicals from the categories of DHS that are subject to the physician self-referral prohibition (72 FR 42792). We are finalizing those proposals in this final rule with comment period.

The revised Medicare ASC payment system that we are implementing beginning January 1, 2008, could have a far-reaching effect on the provision of outpatient surgical services for a number of years to come for several reasons. First, the list of procedures that will be eligible for payment under the revised ASC payment system is greatly expanded from the list of surgical procedures eligible for payment under the ASC payment system in CY 2007 and earlier years. In addition, we are moving from a limited fee schedule based on nine disparate payment groups to a payment system incorporating relative payment weights for groups of procedures with similar clinical and resource characteristics, that is, the APC groups that are the unit of payment in the OPPS.

Implementation by January 1, 2008 of a revised ASC payment system designed to result in budget neutrality is mandated by section 626 of Public Law 108–173. To set ASC payment rates for CY 2008 under the revised payment system, we are multiplying ASC relative payment weights for surgical procedures by an ASC conversion factor that we calculated to result in the same amount of aggregate Medicare expenditures in CY 2008 as we estimate would have been made if the revised payment

system were not implemented (72 FR 42796).

The effects of the expanded number and types of procedures for which an ASC payment may be made and other policy changes that affect the revised payment system, combined with significant changes in payment rates for covered surgical procedures, will vary across ASCs, depending on whether or not the ASC limits its services to those in a particular surgical specialty area, the volume of specific services provided by the ASC, the extent to which ASCs will offer different services, and the percentage of its patients that are Medicare beneficiaries.

In the August 2, 2007 OPPS/ASC proposed rule (42 FR 42628), we estimated the CY 2008 ASC payment rates, budget neutrality adjustment factor, and impacts using the proposed CY 2008 OPPS relative payment weights and update factor for CY 2008, the proposed CY 2008 MPFS PE RVUs, and partial CY 2006 utilization data projected forward to CY 2008. In this final rule with comment period, we are establishing the final CY 2008 ASC payment rates and budget neutrality adjustment in accordance with the methodology for calculating budget neutrality established in the August 2, 2007 revised ASC payment system final rule and based on the final CY 2008 OPPS payment weights, the final CY 2008 MPFS PE RVUs, and updated CY 2006 utilization data projected forward to CY 2008.

Our final methodology for calculating the budget neutrality adjustment established in the August 2, 2007 revised ASC payment system final rule considered not only the effects of the new payment rates to be implemented under the revised ASC payment system, but also the estimated net effect of migration of new ASC procedures across ambulatory care settings. Both the

proposed budget neutrality adjustment presented in the August 2, 2007 OPPI/ASC proposed rule and the budget neutrality adjustment in this final rule with comment period are based on that methodology, which takes into account projected migration. In the final model, we assume that over the first 2 years of the revised payment system, approximately 25 percent of the HOPD volume of new ASC procedures will migrate from the HOPD service setting to ASCs, and that over the 4-year transition period, approximately 15 percent of the physicians' office volume of new ASC procedures will migrate to ASCs.

We estimate that the revised ASC payment system will result in neither savings nor costs to the Medicare program in CY 2008. That is, because it is designed to be budget neutral, in CY 2008, the revised ASC payment system will neither increase nor decrease expenditures under Part B of Medicare. We further estimate that beneficiaries will save approximately \$20 million under the revised ASC payment system in CY 2008, because ASC payment rates will, in most cases, be lower than OPPI payment rates for the same services and because, except for screening flexible sigmoidoscopy and screening colonoscopy procedures, beneficiary coinsurance for ASC services is 20 percent rather than 20 to 40 percent as is the case under the OPPI. (The only possible instance in which an ASC coinsurance amount could exceed the OPPI copayment amount will be when the coinsurance amount for a procedure under the revised ASC payment system exceeds the hospital inpatient deductible. Section 1833(t)(8)(C)(i) of the Act provides that the copayment amount for a procedure paid under the OPPI cannot exceed the inpatient deductible established for the year in which the procedure is performed, but there is no such requirement related to the ASC coinsurance amount.) Beneficiary coinsurance for services migrating from physicians' offices to ASCs may decrease or increase under the revised ASC payment system, depending on the particular service and whether the Medicare payment to the physician for providing that service in his or her office is higher or lower than the sum of the Medicare payment to the ASC for providing the facility portion of that service and the Medicare payment to the physician for providing that service in a facility (non-office) setting. As noted previously, the net effect of the revised ASC payment system on beneficiary coinsurance, taking into account the migration of services from

HOPDs and physicians' offices, is estimated to be \$20 million in beneficiary savings in CY 2008.

1. Alternatives Considered

Alternatives to the changes we are making and the reasons that we have chosen the options are discussed throughout this final rule with comment period. Some of the major issues discussed in this final rule with comment period and the options considered are discussed below.

a. Office-Based Procedures

According to our final policy for the revised ASC payment system, we designate as office-based those procedures that are added to the ASC list of covered surgical procedures in CY 2008 or later years and that we determine are predominantly performed in physicians' offices based on consideration of the most recent available volume and utilization data for each individual procedure code and/or, if appropriate, the clinical characteristics, utilization, and volume of related codes. We establish payment for procedures designated as office-based at the lesser of the MPFS nonfacility PE RVU amount or the ASC rate developed according to the standard methodology of the revised ASC payment system. In the August 2, 2007 OPPI/ASC proposed rule, we proposed to designate 19 additional procedures as office-based, based on our evaluation of the most recent available CY 2006 volume and utilization data for each individual procedure code and/or related codes. In developing this final rule with comment period, we reviewed the newly available CY 2006 utilization data for all the surgical procedures we proposed to designate as office-based. Based on that review, we are designating 18 additional procedures as office-based for CY 2008. We considered two alternatives in developing this policy.

The first alternative we considered was to make no change to the current policy for these 19 procedures. This would mean that we would continue to pay these procedures at the standard ASC payment rate developed according to the standard methodology of the revised ASC payment system. We did not select this alternative because our analysis of data for these services and related procedures indicated that 18 of the procedures we proposed to designate as office-based could be considered to be predominantly performed in physicians' offices. Consistent with our final policy adopted in the August 2, 2007 revised ASC payment system final rule (72 FR

42509), we were concerned that if these services were not designated as office-based, it could create financial incentives for the procedures to shift from physicians' offices to ASCs for reasons unrelated to the most appropriate setting for surgical care.

The second alternative we considered, and the alternative we selected, is to designate 18 additional procedures as office-based for CY 2008. We selected this alternative because our claims data indicate that these procedures could be considered to be predominantly performed in physicians' offices. We believe that designating these procedures as office-based, which results in the ASC payment rate for these procedures being capped at the physician's office rate (that is, the MPFS nonfacility practice PE RVU amount), if applicable, is an appropriate step to ensure that Medicare payment policy does not create financial incentives for such procedures to shift unnecessarily from physicians' offices to ASCs, consistent with our final policy adopted in the August 2, 2007 revised ASC payment system final rule.

b. Partial Device Credits

We are reducing the ASC payment by one half of the device offset amount for certain surgical procedures into which the device cost is packaged, when an ASC receives a partial credit toward replacement of specific implantable devices. This partial payment reduction will apply when the amount of the device credit is greater than or equal to 50 percent of the cost of the new replacement device being implanted. Under this policy, both the Medicare payment to the ASC and the beneficiary coinsurance liability will be reduced when an ASC receives a partial device credit. This policy is an extension of the policy established in the August 2, 2007 revised ASC payment system final rule, which reduces the ASC payment by the full device offset amount for certain devices when the ASC receives a replacement device without cost or receives a credit for the full cost of the device being replaced. The final partial device credit policy for ASCs mirrors the final partial device credit for the OPPI in this final rule with comment period. We considered several alternatives in developing this partial device credit policy for CY 2008.

The first alternative we considered was to make no change to the current policy. Under this alternative, Medicare and the beneficiary would continue to pay the ASC the full payment rate for the device implantation procedure even if the ASC received a substantial credit towards the cost of the replacement

device. The ASC payment for the device implantation procedure is based on the OPPS relative weight for the procedure, which is calculated using only OPPS claims for which the full cost of a device is billed. We did not select this alternative because we believe that, as long as the ASC payment amount is established based on an OPPS relative weight that is calculated using only claims that reflect the full cost of the device when there is no credit, there should be a reduction in the Medicare payment amount when the ASC receives a substantial credit toward the cost of the replacement device. Similarly, we believe that the beneficiary cost sharing should be based on an amount that also reflects the device credit.

The second alternative we considered was to extend the current no cost/full credit reduction policy to cases of partial credit, without change. This would reduce the payment in all cases in which the ASC received a credit by the full offset amount for the device implantation procedure, that is, by 100 percent of the estimated device cost included in the procedure payment rate. We did not select this alternative because we did not believe it was appropriate to reduce the payment to the ASC by the full cost of a device if the ASC only received a partial credit, and not a full credit, towards the cost of the device.

The third alternative, which we are adopting in this final rule with comment period, is to reduce the ASC procedure payment by 50 percent of the offset amount (that will be applied if the ASC received full credit) in cases in which the ASC receives a partial credit greater than or equal to 50 percent of the cost of the new replacement device being implanted. This is consistent with the final CY 2008 OPPS policy described in detail in section IV.A.3. of this final rule with comment period. We will reduce the ASC payment for the specific procedure to implant the device by one-half of the device offset that would be applied if a replacement device were provided at no cost or with full credit, if the credit is 50 percent or more of the new replacement device cost, rather than the proposed 20 percent. We believe that payment policies across the OPPS and the ASC payment system should align whenever possible and appropriate, as is true in this case. Moreover, we are requiring the ASC to report a new modifier when the ASC receives a partial credit that is greater than or equal to 50 percent of the cost of the device being replaced. We are selecting this alternative because we believe that this approach provides an appropriate and equitable payment to

the ASC from Medicare and will reduce the beneficiary's cost sharing for the service.

c. Payment to Physicians for Services Not on the ASC List of Covered Surgical Procedures

Under current policy, when physicians perform surgical procedures in ASCs that are included on the ASC list of covered surgical procedures, they are paid under the MPFS for the PE component using the facility PE RVUs. When physicians perform surgical procedures in ASCs that are not included on the ASC list of covered surgical procedures and for which Medicare does not allow facility payments to ASCs, physicians currently are paid for the PE component at the higher nonfacility rate (unless a nonfacility rate does not exist, in which case Medicare pays the facility rate). In this final rule with comment period, we are providing that regardless of whether a procedure is on the ASC list of covered surgical procedures, a physician performing that procedure in an ASC will receive payment based on the facility PE RVUs and excluding the technical component (TC) payment, if applicable. We considered two alternatives in developing this policy.

The first alternative we considered was to make no change to the current policy concerning physician payment for services performed in ASCs that are not on the ASC list of covered surgical procedures. Under current policy, the physician is paid the higher nonfacility PE amount for performing a service in an ASC that is not on the ASC list of covered surgical procedures (unless a nonfacility rate does not exist in which case Medicare pays the facility PE rate). We adopted a final policy to identify and exclude from ASC payment only those procedures that could pose a significant risk to beneficiary safety or would be expected to require an overnight stay. Because the excluded procedures have been specifically identified by CMS as procedures that are unsafe for Medicare beneficiaries in ASCs because they could pose a significant risk to beneficiary safety or would be expected to require an overnight stay, we do not believe it would be appropriate to provide payment based on the higher nonfacility PE RVUs to physicians who furnish them. Consequently, we did not select this alternative.

The second alternative that we considered, and that we selected, was to provide payment to physicians for performing procedures in ASCs based on the facility PE RVUs and excluding the TC payment, if applicable,

regardless of whether a procedure is on the ASC list of covered surgical procedures. We selected this alternative for several reasons. We believe ASCs are facilities that are similar, insofar as the delivery of surgical and related nonsurgical services, to HOPDs. Specifically, when services are provided in ASCs, the ASC, not the physician, bears responsibility for the facility costs associated with the service. This situation parallels the hospital facility resource responsibility for hospital outpatient services. Therefore, we believe it would be more appropriate for physicians to be paid for all services furnished in ASCs just as they would be paid for all services furnished in the hospital outpatient setting. In addition, because we have adopted a final policy for the revised ASC payment system that identifies and excludes from ASC payment only those procedures that could pose a significant risk to beneficiary safety or would be expected to require an overnight stay, we believe that it would be incongruous with the revised ASC payment system methodology to continue to pay the higher nonfacility rate to physicians who furnish excluded ASC procedures.

2. Limitations of Our Analysis

Presented here are the projected effects of the policy and statutory changes that will be effective for CY 2008 on aggregate ASC utilization and Medicare payments. One limitation is our lack of information on ASC resource use. ASCs are not required to file Medicare cost reports and, therefore, we do not have cost information to evaluate whether or not the payments for ASC services coincide with the resources required by ASCs to provide those services. A second limitation of our analysis is our inability to predict changes in service mix between CY 2006 and CY 2008 with precision. The aggregated impact tables below are based upon a methodology that assumes no changes in service mix with respect to the CY 2006 ASC data used for this final rule with comment period. We believe that the net effect on Medicare expenditures resulting from changes in service mix for current ASC covered surgical procedures will be negligible in the aggregate. Such changes may have differential effects across surgical specialties as ASCs adjust to payment rates. However, we are unable to accurately project such changes at a disaggregated level. Clearly, individual ASCs will experience changes in payment that differ from the aggregated estimated changes presented below.

3. Estimated Effects of This Final Rule With Comment Period on ASCs

a. Payment to ASCs

Some ASCs are multispecialty facilities that perform the gamut of surgical procedures, from excision of lesions to hernia repair to cataract extraction; others focus on a single specialty and perform only a limited range of surgical procedures, such as eye, digestive system, or orthopedic procedures. The combined effect on an individual ASC of the CY 2008 revised payment system and the expanded ASC list of covered surgical procedures will depend on a number of factors, including, but not limited to, the mix of services the ASC provides, the volume of specific services provided by the ASC, the percentage of its patients who are Medicare beneficiaries, and the extent to which an ASC will choose to provide different services. The following discussion presents tables that provide estimates of the impact of the revised ASC payment system on Medicare payments to ASCs for current ASC services, assuming the same mix of services as reflected in our CY 2006 claims data. Table 63 depicts the aggregate percent change in payment by surgical specialty group and Table 64 shows a comparison of payment for procedures that we estimate would receive the most Medicare payment in CY 2008 under the current payment system.

In section XVI.C.1.c.(5) of this final rule with comment period, we reiterate the transition of 4 years under the revised ASC payment system, where payments for most surgical procedures will be made using a blend of the rates based on the CY 2007 ASC payment rate and the revised ASC payment rate. In CY 2008, we will pay ASCs using a 75/25 blend, in which payment will be calculated by adding 75 percent of the CY 2007 ASC rate for a surgical procedure on the CY 2007 ASC list of covered surgical procedures and 25 percent of the CY 2008 revised ASC rate for the same procedure. For CYs 2009 and 2010, we will transition the blend

first to 50/50 and then to a 25/75 blend of the CY 2007 ASC rate and the revised ASC payment rate. Beginning in CY 2011, we will pay ASCs for covered surgical procedures on the CY 2007 ASC list at the fully implemented revised ASC payment rates. We will not transition payment for procedures that were not included on the ASC list of covered surgical procedures in CY 2007; we will pay for these procedures at the fully implemented ASC rate, beginning in CY 2008.

Table 63 shows the effects on aggregate Medicare payments under the revised ASC payment system by surgical specialty group. We have aggregated the surgical HCPCS codes by specialty group and estimated the effect on aggregated payment for surgical specialty groups, considering separately the CY 2008 transitional rate and the fully implemented revised ASC payment rate discussed above. The groups are sorted for display in descending order by estimated Medicare program payment to ASCs for CY 2008 in the absence of the revised ASC payment system. The following is an explanation of the information presented in Table 63.

- **Column 1—Surgical Specialty Group** indicates the surgical specialties into which ASC procedures are grouped. We used the CPT code range definitions and Level II HCPCS codes and Category III CPT codes, as appropriate, to account for all surgical procedures to which the Medicare program payments are attributed.

- **Column 2—Estimated CY 2008 ASC Payments** in the absence of the revised ASC payment system were calculated by multiplying the CY 2007 ASC payment rate by CY 2008 ASC utilization (which is based on CY 2006 ASC utilization multiplied by a factor of 1.176 to take into account expected volume growth with volume adjustment, as appropriate, for the multiple procedure discount). The resulting amount was then multiplied by 0.8 to estimate the Medicare program's share of the total payments to the ASC. The estimated CY

2008 payment amounts are expressed in millions of dollars.

- **Column 3—Estimated CY 2008 Percent Change with Transition (75/25 Blend)** is the aggregate percentage increase or decrease in Medicare program payment to ASCs for each surgical specialty group that is attributable to changes in the ASC payment rates for CY 2008 under the 75/25 blend of the CY 2007 ASC payment rate and the CY 2008 revised ASC payment rate.

- **Column 4—Estimated CY 2008 Percent Change without Transition (Fully Implemented)** is the aggregate percentage increase or decrease in Medicare program payment to ASCs for each surgical specialty group that is attributable to changes in the ASC payment rates for CY 2008 if there were no transition period to the revised payment rates. The percentages appearing in Column 4 are presented as comparisons to the percentage changes under the transition policy in column 3 and do not depict the impact of the fully implemented policy in 2011.

As seen in Table 63, for all but digestive system procedures, if an ASC offers the same mix of services in CY 2008 that is reflected in our national CY 2006 claims data, Medicare payments to the ASC for services in that surgical specialty group are expected to increase under the revised payment system. If the revised payment system was fully implemented in CY 2008, we expect all but digestive system procedures and nervous system procedures to receive greater Medicare payment. In addition to the effects on Medicare payments for current ASC procedures shown in Table 63, it is important to note that estimated CY 2008 payments to ASCs are estimated to increase by more than \$240 million in CY 2008 due to projected migration of new ASC services from HOPDs and physicians' offices to ASC. This increased spending in ASCs is projected to be fully offset by savings from reduced spending in HOPDs and physicians' offices due to service migration.

TABLE 63.—ESTIMATED CY 2008 IMPACT OF THE REVISED ASC PAYMENT SYSTEM ON ESTIMATED AGGREGATE CY 2008 MEDICARE PROGRAM PAYMENTS UNDER THE 75/25 TRANSITION BLEND AND WITHOUT A TRANSITION, BY SURGICAL SPECIALTY GROUP

| Surgical specialty group | Estimated CY 2008 ASC payments (in millions) | Estimated CY 2008 percent change with transition (75/25 Blend) | Estimated CY 2008 percent change without transition (fully implemented) |
|-----------------------------|--|--|---|
| (1) | (2) | (3) | (4) |
| Eye and ocular adnexa | \$1,247 | 2 | 3 |

TABLE 63.—ESTIMATED CY 2008 IMPACT OF THE REVISED ASC PAYMENT SYSTEM ON ESTIMATED AGGREGATE CY 2008 MEDICARE PROGRAM PAYMENTS UNDER THE 75/25 TRANSITION BLEND AND WITHOUT A TRANSITION, BY SURGICAL SPECIALTY GROUP—Continued

| Surgical specialty group | Estimated CY 2008 ASC payments (in millions) | Estimated CY 2008 percent change with transition (75/25 Blend) | Estimated CY 2008 percent change without transition (fully implemented) |
|-----------------------------------|--|--|---|
| (1) | (2) | (3) | (4) |
| Digestive system | 708 | -4 | -16 |
| Nervous system | 260 | 3 | -4 |
| Musculoskeletal system | 165 | 24 | 94 |
| Integumentary system | 75 | 8 | 32 |
| Genitourinary system | 74 | 11 | 43 |
| Respiratory system | 18 | 16 | 64 |
| Cardiovascular system | 8 | 24 | 94 |
| Auditory system | 4 | 23 | 80 |
| Hemic and lymphatic systems | 2 | 31 | 124 |
| Other systems | 0.1 | 27 | 108 |

Table 64 below shows the estimated impact of the revised payment system on aggregate ASC payments for selected procedures during the first year of implementation (CY 2008) with and without the transitional blended rate. The table displays 30 of the procedures receiving the most Medicare estimated CY 2008 ASC payments under the existing Medicare payment system. The HCPCS codes are sorted in descending order by estimated program payment.

- Column 1—*HCPCS code*
- Column 2—*Short Descriptor* of the HCPCS code
- Column 3—*Estimated CY 2008 ASC Payments* in the absence of the revised payment system were calculated by multiplying the CY 2007 ASC payment

rate by CY 2008 ASC utilization (which is based on CY 2006 ASC utilization multiplied by a factor of 1.176 to take into account expected volume growth with volume adjustment, as appropriate, for the multiple procedure discount). The resulting amount was then multiplied by 0.8 to estimate the Medicare program's share of the total payments to the ASC. The estimated CY 2008 payment amounts are expressed in millions of dollars.

- Column 4—*CY 2008 Percent Change with Transition (75/25 Blend)* reflects the percent differences between the estimated ASC payment rates for CY 2008 under the current system and the payment rates for CY 2008 under the revised system, incorporating a 75/25

blend of the estimated ASC payment using the CY 2007 ASC payment rate and the CY 2008 revised ASC payment rate.

- Column 5—*CY 2008 Percent Change without Transition (Fully Implemented)* reflects the percent differences between the estimated ASC payment rates for CY 2008 under the current system and the estimated payment rates for CY 2008 under the revised payment system if there were no transition period to the revised payment rates. The percentages appearing in Column 5 are presented as a comparison to the percentage changes under the transition policy in Column 4 and do not depict the impact of the fully implemented policy in 2011.

TABLE 64.—ESTIMATED CY 2008 IMPACT OF REVISED ASC PAYMENT SYSTEM ON AGGREGATE PAYMENTS FOR PROCEDURES WITH THE MOST MEDICARE ESTIMATED CY 2008 PAYMENTS UNDER THE CURRENT SYSTEM

| HCPCS code | Short descriptor | Estimated CY 2008 ASC payments (in millions) | Estimated CY 2008 percent change (75/25 blend) | Estimated CY 2008 percent changes without transition (fully implemented) |
|-------------|-------------------------------------|--|--|--|
| 66984 | Cataract surg w/iol, 1 stage | 1,017 | 0 | 1 |
| 43239 | Upper GI endoscopy, biopsy | 156 | -5 | -17 |
| 45378 | Diagnostic colonoscopy | 141 | -4 | -14 |
| 45380 | Colonoscopy and biopsy | 115 | -4 | -14 |
| 45385 | Lesion removal colonoscopy | 95 | -4 | -14 |

| 45383 | Lesion removal colonoscopy | 8 | -4 | -14 |
| 26055 | Incise finger tendon sheath | 8 | 13 | 35 |

Over time, we believe that the current ASC payment system has served as an incentive to ASCs to focus on providing procedures for which they determine Medicare payments will support the ASC's continued operation. We note that, under the existing payment system, the ASC payment rates for many of the most frequently performed procedures in ASCs are similar to the OPPS payment rates for the same procedures. Conversely, we note that procedures with existing ASC payment rates that are substantially lower than the OPPS rates are performed least often in ASCs. We believe the revised ASC payment system represents a major stride towards encouraging greater efficiency in ASCs and promoting a significant increase in the breadth of surgical procedures performed in ASCs, because it distributes payments across the entire spectrum of covered surgical procedures, based on a coherent system of relative payment weights that are related to the clinical and facility resource characteristics of those procedures.

Table 64 identifies a number of ASC procedures receiving the most Medicare estimated CY 2008 payment under the current system and shows that most of them will experience payment decreases in CY 2008 under the revised ASC payment system. This contrasts with the estimated aggregate payment increases at the surgical specialty group level displayed in Table 63. In fact, Table 63 shows only one surgical specialty group of procedures for which the payments are expected to decrease in the first year under the revised ASC payment system, and only two groups for which a

decrease would be expected if there were no transition period to the revised CY 2008 payment rates. The estimated increased payments at the full group level are due to the moderating effect of the payment increases for the less frequently performed procedures within the surgical specialty group. The exception to this is the surgical specialty group of eye and ocular adnexa where the projected aggregate increase in CY 2008 under the revised system is driven by a very small increase, less than 1 percent, in payment for the highest volume procedure (CPT code 66984, Extracapsular cataract removal with insertion of intraocular lens prosthesis (one stage procedures), manual or mechanical technique (e.g., irrigation and aspiration or phacoemulsification)).

As a result of the redistribution of payments across the expanded breadth of surgical procedures for which Medicare will provide an ASC payment, we believe that ASCs may change the mix of services they provide over the next several years. The revised ASC payment system should encourage ASCs to expand their service-mix beyond the handful of the highest paying procedures which comprise the majority of ASC utilization under the existing ASC payment system. For example, although the payment rate for cystoscopy (CPT code 52000), the highest volume ASC genitourinary procedure, is 6 percent less for CY 2008 than under the existing payment system, overall payment to ASCs for the group of genitourinary procedures currently performed in ASCs is expected to increase by 11 percent. Although a

urology specialty ASC may currently perform more cystoscopy procedures than any other genitourinary procedure, we believe that under the revised ASC payment system, each ASC has the opportunity to adapt to the payment decrease for its most frequently performed procedures by offering an increased breadth of procedures, still within the clinical specialty area, and receive payments that are adequate to support continued operations. Similarly, payment for all of the highest volume pain management injection procedures are expected to decrease in CY 2008, although payment for nervous system procedures overall are expected to increase. However, if there were no transition period, we estimate that CY 2008 payments also would decrease slightly for the nervous system surgical specialty group.

We note that the estimated percent changes in payment under the revised ASC payment system for the surgical procedures with the highest aggregate Medicare ASC payments closely resemble those presented in the CY 2008 OPPS/ASC proposed rule, with the exception of CPT codes 64476 (Injection, anesthetic agent and/or steroid, paravertebral facet joint or facet joint nerve; lumbar or sacral, each additional level (List separately in addition to code for primary procedure)); and 64484 (Injection, anesthetic agent and/or steroid, transforaminal epidural; lumbar or sacral, each additional level (List separately in addition to code for primary procedure)). Our estimates of the percent changes in ASC payment for these two injection procedures are

considerably greater for this final rule than they were for the CY 2008 OPPS/ASC proposed rule. Both of these nervous system procedures had significantly more single claims available for OPPS ratesetting for this final rule with comment period, reflecting much lower costs than their median costs for the proposed rule. These data resulted in the reassignment of CPT codes 64476 and 64484 to different clinical APCs for CY 2008 than proposed, in order to ensure the clinical and resource homogeneity of the OPPS APCs for CY 2008. Their lower OPPS payment rates in turn resulted in lower payments than those estimated in the proposed rule for the two services under the revised ASC payment system. However, as shown in Table 63, above, the final estimated decrease in ASC payment for nervous system procedures overall without the transition is estimated to be 4 percent in this final rule with comment period, very close to the CY 2008 OPPS/ASC proposed rule estimated decrease of 2 percent for nervous system procedures. Thus, we believe that our final policies will continue to ensure Medicare beneficiary access to surgical procedures involving the nervous system in ASCs under the revised ASC payment system in CY 2008.

For those procedures that will be paid a significantly lower amount under the revised payment system than they are currently paid, we believe that their current payment rates, which are closer to the OPPS payment rates than are the rates for other ASC procedures, are likely to be generous relative to ASC costs, so ASCs would, in all likelihood, continue performing those procedures under the revised payment system. We also note that the majority of the most frequently performed ASC procedures specifically studied by the GAO for its report to Congress on ASC costs, as described in the August 2, 2007 revised ASC payment system final rule (72 FR 42474), appear in Table 64 with payment decreases under the revised ASC payment system. The GAO concluded that for those procedures the OPPS APC groups accurately reflect the relative costs of procedures performed at ASCs and that ASCs have substantially lower costs.

For some procedures, the payment amounts in CY 2008 are much higher than the CY 2007 rates currently paid to ASCs. For example, payments for CPT codes 29880 (Arthroscopy, knee, surgical; with meniscectomy (medial AND lateral, including any meniscal shaving)) and 29881 (Arthroscopy, knee, surgical; with meniscectomy (medial OR lateral, including meniscal shaving))

increase by 22 percent. For these two procedures and the other procedures with estimated payment increases greater than 10 percent, the increases are due to the comparatively higher OPPS rates which, when adjusted by the ASC budget neutrality factor and blended with the CY 2007 ASC payment amounts, generate CY 2008 ASC payment rates that are substantially above the current CY 2007 ASC payment amounts.

As indicated elsewhere in this final rule with comment period, payments for most of the highest volume colonoscopy and upper gastrointestinal endoscopy procedures will decrease under the revised payment system. Table 63 estimates that payment decreases also are expected for the digestive system surgical specialty group overall. We believe that the reason for decreased payments for so many of the digestive system procedures is that the current ASC payment rates are close to the OPPS rates. Procedures with current payment rates that are nearly as high as their OPPS rates are negatively affected under the revised payment system while procedures for which ASC rates have historically been much lower than the comparable OPPS rates are positively affected. The payment decreases expected in the first year under the revised ASC payment system for some of the high volume digestive system procedures are not large (all less than or equal to 7 percent). We believe that ASCs can generally continue to cover their costs for these procedures, and that ASCs specializing in providing those services will be able to adapt their business practices and case mix to manage declines for individual procedures.

In addition to the procedures currently on the ASC list of covered surgical procedures discussed above, in CY 2008 we also are adding hundreds of surgical procedures to the already extensive list of procedures for which Medicare allows payment to ASCs, creating new opportunities for ASCs to expand their range of covered surgical procedures. For the first time, ASCs will be paid separately for covered ancillary services that are integral to covered surgical procedures, including certain radiology procedures, costly drugs and biologicals, devices with pass-through status under the OPPS, and brachytherapy sources. While separately paid radiology services will be paid based on their ASC relative payment weight calculated according to the standard ratesetting methodology of the revised ASC payment system or the MPFS nonfacility PE RVU amount, whichever is lower, the other covered

ancillary items and services newly eligible for separate payment in ASCs will be paid comparably to their OPPS rates because we would not expect ASCs to experience efficiencies in providing them. Lastly, the August 2, 2007 revised ASC payment system final rule established a specific payment methodology for device-intensive procedures that provides the same packaged payment for the device as under the OPPS, while providing a reduced service payment that is subject to the 4-year transition if the device-intensive procedure is on the CY 2007 ASC list of covered surgical procedures. We expect that this final methodology will allow ASCs to continue to expand their provision of device-intensive services and to begin performing new device-intensive ASC procedures.

b. Payment to Physicians for Performing Excluded ASC Procedures in an ASC

As discussed in section XVI.G. of this final rule with comment period, we are paying physicians at the facility rate for furnishing procedures in ASCs that are excluded from the ASC list of covered procedures. This policy reduces site of service (facility versus nonfacility) differentials that currently exist and aligns physician payment policies for services furnished in ASCs and HOPDs.

We believe that the effect of the change will be small. Currently, physicians are paid for procedures performed in ASCs that are not on the list of ASC covered surgical procedures based on the nonfacility PE RVUs, unless a nonfacility rate does not exist, in which case they are paid based on the facility rate. For CY 2008, we excluded procedures from the ASC list of covered surgical procedures because they could pose a significant risk to beneficiary safety or would be expected to require an overnight stay and, as such, the excluded procedures are generally more complex than procedures furnished in physicians' offices. Consequently, most surgical procedures that are excluded from the list of ASC covered surgical procedures in CY 2008 do not have nonfacility PE RVUs. Specifically, only about 46 of approximately 2,000 excluded ASC procedures for CY 2008 have nonfacility PE RVUs. As a result, even under our current policy, physicians performing an excluded ASC procedure in an ASC would be paid for most excluded procedures based on the facility PE RVUs. Thus, our policy to pay physicians for excluded ASC procedures performed in ASCs based on the facility PE RVUs will only affect Medicare payment rates for the small proportion of excluded procedures that have nonfacility PE RVUs.

4. Estimated Effects of This Final Rule With Comment Period on Beneficiaries

a. Payment to ASCs

We estimate that the changes for CY 2008 will be positive for beneficiaries in at least two respects. Except for screening colonoscopy and flexible sigmoidoscopy procedures, the ASC coinsurance rate for all procedures is 20 percent. This contrasts with procedures performed in HOPDs where the beneficiary is responsible for copayments that range from 20 percent to 40 percent. In addition, ASC payment rates under the revised payment system are lower than payment rates for the same procedures under the OPPTS, so the beneficiary coinsurance amount under the ASC payment system almost always will be less than the OPPTS copayment amount for the same services. (The only exceptions will be when the ASC coinsurance amount exceeds the inpatient deductible. The statute requires that copayment amounts under the OPPTS not exceed the inpatient deductible.) Beneficiary coinsurance for services migrating from physicians' offices to ASCs may decrease or increase under the revised ASC payment system, depending on the particular service and the relative payment amounts for that service in the physician's office compared with the ASC. As noted previously, the net effect of the revised ASC payment system on beneficiary coinsurance, taking into account the migration of services from HOPDs and physicians' offices, is estimated to be \$20 million in beneficiary savings in CY 2008.

In addition to the lower out-of-pocket expenses, we believe that beneficiaries also will have access to more services in ASCs as a result of the addition of approximately 800 surgical procedures to the ASC list of covered surgical services eligible for Medicare payment in CY 2008. We expect that ASCs will provide a broader range of surgical services under the revised payment system and that beneficiaries will benefit from having access to a greater variety of surgical procedures in ASCs.

b. Payment to ASCs for Excluded Procedures Performed in an ASC

In addition, the revision to §§ 414.22(b)(5)(i)(A) and (B) will impose beneficiary liability for facility costs associated with surgical procedures that are not Medicare covered surgical procedures in ASCs. In the August 2, 2007 revised ASC payment system final rule, CMS determined that the only surgical procedures that will be excluded from ASC payment in CY 2008 are those that could pose a significant

safety risk to beneficiaries when furnished in an ASC or are expected to require an overnight stay when furnished in ASCs and, therefore, Medicare provides no payment to ASCs for these procedures. The revision to §§ 414.22(b)(5)(i)(A) and (B) will also provide for no payment to physicians for the facility resources required to furnish excluded services in ASCs, leaving the beneficiary liable for the facility payment if a surgical procedure excluded by Medicare from ASC payment is, in fact, performed in the ASC setting. We do not expect that the change will result in a meaningful increase in beneficiary liability because we do not expect that excluded services, which we have determined could pose a significant risk to beneficiary safety or would be expected to require an overnight stay, will be furnished to Medicare beneficiaries in ASCs. Furthermore, we expect that physicians and ASCs will advise beneficiaries of all of the possible consequences (including denial of Medicare payment with concomitant beneficiary liability and significant surgical risk) if surgical procedures excluded from ASC payment are provided in ASCs.

5. Conclusion

The changes to the ASC payment system for CY 2008 will affect each of the approximately 4,800 ASCs currently approved for participation in the Medicare program. The effect on an individual ASC will depend on the ASC's mix of patients, the proportion of the ASC's patients that are Medicare beneficiaries, the degree to which the payments for the procedures offered by the ASC are changed under the revised payment system, and the degree to which the ASC chooses to provide a different set of procedures.

The revised ASC payment system is designed to result in the same aggregate amount of Medicare expenditures in CY 2008 that would be made in the absence of the revised ASC payment system. As mentioned previously, we estimate that the revised ASC payment system and the expanded ASC list of covered surgical procedures that we are implementing in CY 2008 will have no net effect on Medicare expenditures compared to the level of Medicare expenditures that would have occurred in CY 2008 in the absence of the revised payment system. However, there will be a total increase in Medicare payments to ASCs for CY 2008 of approximately \$240 million as a result of the revised ASC payment system, which will be fully offset by savings from reduced Medicare spending in HOPDs and physicians' offices on services that

migrate from these settings to ASCs (as discussed in detail in section XVI.L. of this final rule with comment period). Furthermore, we estimate that the revised ASC payment system will result in Medicare savings of \$220 million over 5 years due to migration of new ASC services from HOPDs and physicians' offices to ASCs over time. We anticipate that this final rule with comment period will have a significant economic impact on a substantial number of small entities.

6. Accounting Statement

As required by OMB Circular A-4 (available at <http://www.whitehouse.gov/omb/circulars/a004/a-4.pdf>), in Table 65 below, we have prepared an accounting statement showing the classification of the expenditures associated with the implementation of the CY 2008 revised ASC payment system, based on the provisions of this final rule with comment period. As explained above, we estimate that Medicare payments to ASCs for CY 2008 will be about \$240 million higher than they otherwise would be in the absence of the revised ASC payment system. This \$240 million in additional payments to ASCs will be fully offset by savings from reduced Medicare spending in HOPDs and physicians' offices on services that migrate from these settings to ASCs. This table provides our best estimate of Medicare payments to providers and suppliers as a result of the CY 2008 revised ASC payment system, as presented in this final rule with comment period. All expenditures are classified as transfers.

TABLE 65.—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES FROM CY 2007 TO CY 2008 AS A RESULT OF THE CY 2008 REVISED ASC PAYMENT SYSTEM

| Category | Transfers |
|---------------------------------|--|
| Annualized Monetized Transfers. | \$0 Million. |
| From Whom to Whom | Federal Government to Medicare Providers and Suppliers. |
| Annualized Monetized Transfer. | \$0 Million. |
| From Whom to Whom | Premium Payments from Beneficiaries to Federal Government. |
| Total | \$0 Million. |

D. Effects of the Requirements for Reporting of Quality Data for Hospital Outpatient Settings

In section XVII. of this final rule with comment period, we discuss our measures and requirements for reporting of quality data to CMS for services furnished in hospital outpatient settings under the HOP QDRP. We note that we have reduced the number of initial quality measures to be reported from the 10 we proposed to 7. We have also modified the date for which the initial submission of quality data begins from services furnished on or after January 2008 to services furnished on or after April 2008. The initial submission for data for April–June 2008 services is due to the OPPI Clinical Warehouse by November 1, 2008. CMS and its contractors will provide assistance to all hospitals that wish to submit data. In addition, we have modified our proposal for the CY 2009 payment update, so that hospitals are not required to submit charts for or pass our validation requirement of a minimum of 80 percent reliability, based upon our chart-audit validation process for January 2008 services. As noted in section XVII.E. of this final rule with comment period, we are providing validation criteria for services furnished on or after July 1, 2008 for purposes of the CY 2010 and subsequent years' payment updates to ensure that the quality data being sent to CMS are accurate. The requirement of five charts per hospital per quarter will result in the submission of approximately 21,500 charts per quarter for services furnished on or after July 1, 2008 to the agency. We believe that a requirement for five charts per hospital per quarter for services furnished on or after July 1, 2008, represents a minimal burden to the participating hospital.

E. Effects of Policy Revisions on CAH Off-Campus and Co-Location Requirements

In section XVIII.A. of the preamble of this final rule with comment period, we discuss our changes regarding a CAH's ability to co-locate with another acute care hospital or establish an off-campus location that does not comply with the location requirements (more than a 35-mile drive, or in the case of mountainous terrain or in areas with only secondary roads available, a 15-mile drive) for CAHs. We clarified in this final rule with comment period that if a CAH with a necessary provider designation has a co-location arrangement with another hospital or CAH that was in effect before January 1, 2008, and the type and scope of services

offered by the facilities co-located with the necessary provider CAH do not change, the CAH can continue those arrangements. In addition, if a CAH (including one with a necessary provider designation) acquires or creates an off-campus provider-based location or an off-campus distinct part psychiatric or rehabilitation unit on or after January 1, 2008, the CAH off-campus provider-based facility must comply with the location requirements. We revised the language of the regulation to exclude RHCs, as defined under § 405.2401(b), from the list of provider-based facilities that must comply with this regulation. Because CAHs can continue current co-location and off-campus arrangements that are in place before January 1, 2008, we believe there is no burden associated with this regulation.

F. Effects of Policy Revisions to the Hospital CoPs

In section XVIII.B. of the preamble of this final rule with comment, we discuss changes to the hospital CoPs relating to timeframes for completion of medical history and physical examinations and requirements for preanesthesia and postanesthesia evaluations of Medicare beneficiaries. We believe that these revisions would impose minimal additional costs on hospitals. In fact, hospitals may realize some minimal cost savings. The cost of implementing these changes would largely be limited to the one-time cost related to the revision of a hospital's medical staff bylaws and its policies and procedures as they relate to the requirements for medical history and physical examinations and for preanesthesia and postanesthesia evaluations. There also may be some minimal cost associated with communicating these changes to affected hospital staff. However, we believe that these costs would be offset by the benefits derived from the overall intent of these revisions to require that the most current information regarding a patient's condition be available to hospital staff so that risks to patient safety can be minimized and potential adverse outcomes can be avoided. Furthermore, the changes would clarify existing hospital CoPs to make them more consistent with current practice, while still retaining the flexibility and reduction in burden that hospitals are currently provided in meeting those CoPs. Therefore, no burden is being assessed on the revision of medical staff bylaws and hospital policies and procedures or on the communication of these revisions to staff that would be required by these revisions as these

practices are usual and customary business practices.

In accordance with the provisions of Executive Order 12866, this final rule with comment period was reviewed by the OMB.

G. Impact of the Changes to the Hospital Inpatient Prospective Payment System (IPPS) Payment Rates

1. Overall Impact

We have examined the impacts of this final rule relating to the changes to hospital inpatient prospective payment system payment rates as required by Executive Order 12866 (September 1993, Regulatory Planning and Review), section 1102(b) of the Social Security Act, the Unfunded Mandates Reform Act of 1995 (Public Law 104–4), and Executive Order 13132. We have also examined the impacts of this final rule in the context of the Regulatory Flexibility Act (RFA) (September 19, 1980, Public Law 96–354).

Based on the IPPS provisions specified in section XIX. of this final rule, we have determined that this rule is a major rule as defined in 5 U.S.C. 804(2). This final rule includes changes in FY 2008 IPPS payments due to the enactment of Public Law 110–90, which requires the Secretary to apply a prospective documentation and coding adjustment for discharges during FY 2008 of –0.6 percent rather than the –1.2 percent specified in the FY 2008 IPPS final rule. In addition, this final rule includes a change in policy to not apply the documentation and coding adjustment to the hospital-specific payment rates. We estimate that the increase in FY 2008 IPPS operating and capital payments to hospitals resulting from the provisions of this final rule will be in excess of \$100 million.

With the exception of the IPPS changes included in this final rule, all FY 2008 IPPS payment policies were established in the FY 2008 IPPS final rule (72 FR 47130) issued on August 1, 2007. As noted in section XIX. of this document, on September 28, 2007, we issued a notice relating to the FY 2008 IPPS final rule that corrected a technical calculation and typographical errors in that final rule. The correction notice appeared in the October 10, 2007 **Federal Register** and is hereinafter referred to as the “second FY 2008 IPPS correction notice.” In the second FY 2008 IPPS correction notice, we estimated a \$4.0 billion increase in FY 2008 operating and capital payments as a result of the market basket update to the FY 2008 IPPS rates required by the statute, in conjunction with the other payment policies established in the FY

2008 IPPS final rule. In this final rule, we have updated our estimate of the increase in FY 2008 IPPS operating and capital payments based on the policies and market basket update established in the FY 2008 IPPS final rule and the addition of the IPPS provisions included in this final rule. We now estimate an increase in FY 2008 operating and capital payments of approximately \$4.6 billion, an increase of about \$665 million over our prior estimate. Our current estimate includes the statutorily mandated – 0.6 percent adjustment for documentation and coding changes to the IPPS standardized amounts and capital Federal rates for FY 2008 under section 7 of Public Law 110–90, and the removal of the application of the documentation and coding adjustment to the hospital-specific rates. For purposes of the impact analysis, we also assume a 1.2 percent increase in case-mix growth, as determined by the Office of the Actuary, because we believe the adoption of the MS–DRGs will result in case-mix growth due to documentation and coding changes that do not reflect real changes in patient severity of illness. The estimates do not reflect any other changes in hospital admissions or case-mix intensity in operating PPS payments, which will also affect overall payment changes.

The RFA requires agencies to analyze options for regulatory relief of small businesses for any rule for which the agency publishes a general notice of proposed rulemaking. Since we have waived notice and comment rulemaking for the IPPS provisions in this final rule as discussed in section XIX.C. of this final rule, we do not believe the Regulatory Flexibility Act requires a regulatory flexibility analysis in this case. While we do not believe we are required to perform a regulatory flexibility analysis, we are including in section XIX. of this final rule and in this impact analysis section final rule all of the components that would be required of a final regulatory flexibility analysis.

For purposes of the RFA, small entities include small businesses, nonprofit organizations, and government agencies. Most hospitals and most other providers and suppliers are considered to be small entities, either by nonprofit status or by having revenues of \$31.5 million or less in any 1 year. (For details on the latest standards for health care providers, we refer readers to page 33 of the Table of Small Business Size Standards at the Small Business Administration Web site at: <http://www.sba.gov/services/contractingopportunities/sizestandardstocps/tableofsize/>

index.html.) For purposes of the RFA, all hospitals and other providers and suppliers are considered to be small entities. Individuals and States are not included in the definition of a small entity. We believe that the IPPS payment rate changes in this final rule will have a significant impact on small entities as explained subsequently.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis for any proposed or final rule that may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. With the exception of hospitals located in certain New England counties, for purposes of section 1102(b) of the Act, we now define a small rural hospital as a hospital that is located outside of an urban area and has fewer than 100 beds. Section 601(g) of the Social Security Amendments of 1983 (Public Law 98–21) designated hospitals in certain New England counties as belonging to the adjacent urban area. Thus, for purposes of the IPPS, we continue to classify these hospitals as urban hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 (Public Law 104–4) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of \$100 million in 1995 dollars, updated annually for inflation. That threshold level is currently approximately \$120 million. This IPPS changes in this final rule will not mandate any requirements for State, local, or tribal governments, nor will it affect private sector costs.

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. As stated above, the IPPS changes in this final rule will not have a substantial effect on State and local governments.

The following analysis, in conjunction with the section XIX. of this document, demonstrates that this rule is consistent with the regulatory philosophy and principles identified in Executive Order 12866, the RFA, and section 1102(b) of the Act. The rule will affect payments to a substantial number of small rural hospitals, as well as other classes of hospitals, and the effects on some hospitals may be significant.

2. Objectives

The primary objective of the IPPS is to create incentives for hospitals to

operate efficiently and minimize unnecessary costs while at the same time ensuring that payments are sufficient to adequately compensate hospitals for their legitimate costs. In addition, we share national goals of preserving the Medicare Hospital Insurance Trust Fund.

We believe that the policies established in the FY 2008 IPPS final rule and the IPPS provisions of this final rule will further each of these goals while maintaining the financial viability of the hospital industry and ensuring access to high quality health care for Medicare beneficiaries. We expect that these changes will ensure that the outcomes of this payment system are reasonable and equitable while avoiding or minimizing unintended adverse consequences.

3. Limitations of Our Analysis

The following quantitative analysis presents the projected effects of our IPPS policy changes, as well as statutory changes effective for FY 2008, on various hospital groups. We use the best available data, but generally do not attempt to make adjustments for future changes in such variables as admissions, length of stay, or case-mix. However, as stated in the FY 2008 IPPS final rule, we believe that adoption of the MS–DRGs will create a risk of increased aggregate levels of payment as a result of more comprehensive documentation and coding. As explained in section XIX. of this final rule, the FY 2008 IPPS final rule established a documentation and coding adjustment of – 1.2 percent to maintain budget neutrality for the transition to the MS–DRGs. Subsequently, Congress enacted Public Law 110–90, which reduced the FY 2008 IPPS documentation and coding adjustment from – 1.2 percent to – 0.6 percent. Therefore, in section XIX. of this final rule, we have revised the payment rates, factors and thresholds to reflect the – 0.6 percent documentation and coding adjustment. While the documentation and coding adjustment has been changed for payment purposes, we continue to believe that an increase in case mix of 1.2 percent in FY 2008 is likely as a result of the adoption of the MS–DRGs. The impacts shown below illustrate the impact of the FY 2008 IPPS changes on hospital operating payments, including the – 0.6 percent documentation and coding adjustment to the IPPS standardized amounts, both prior to and following the projected 1.2 percent growth in case-mix.

4. Quantitative Effects of the IPPS Policy Changes for Operating Costs

In this final rule, we are employing the same operating payment simulation model as used in the FY 2008 IPPS final rule. Our methodology underlying the simulation model is discussed in detail in the FY 2008 IPPS final rule (72 FR 48158 through 48159). The difference between the impact estimates in this final rule and the FY 2008 IPPS final rule reflects the application of a documentation and coding adjustment of -0.6 percent (instead of -1.2 percent) and the removal of the application of the documentation and coding adjustment to the hospital-specific rates. Our impact estimates in this final rule also reflect a technical correction to a calculation error made in our previously published impact estimates, as discussed in more detail subsequently.

5. Analysis of Table I

Table I displays the estimated increase in IPPS operating payments between FY 2007 and FY 2008. It compares the impact estimates previously published in the second FY 2008 IPPS correction notice to the FY 2008 IPPS final rule, which is based on the payment policies and market basket update established in the FY 2008 IPPS final rule, with our current impact estimates, which are based on both the IPPS policies established in the FY 2008 IPPS final rule and the IPPS policy changes included in this final rule.

As noted previously, we believe that the adoption of the MS-DRGs in FY 2008 will create a financial risk of increased aggregate payments as a result of more comprehensive documentation and coding. To maintain budget neutrality, the FY 2008 IPPS final rule established a documentation and coding adjustment of -1.2 percent for FY 2008. Subsequently, Public Law 110-90 was enacted, which reduces the FY 2008 documentation and coding adjustment

from -1.2 percent to -0.6 percent. Thus, our previously published impact estimates reflect a -1.2 percent documentation and coding adjustment and our current impact estimates reflect a -0.6 percent adjustment. While the documentation and coding adjustment has been changed for payment purposes, we continue to believe that an increase in case-mix of 1.2 percent for FY 2008 is likely to occur. Table 1 illustrates the impact of the FY 2008 IPPS changes on hospital payments, including the documentation and coding adjustment to the IPPS standardized amounts, both prior to and following the projected 1.2 percent growth in case-mix.

The table categorizes hospitals by various geographic and special payment considerations to illustrate the varying impacts on different types of hospitals. The top row of the table shows the overall impact on the 3,534 hospitals included in the analysis.

The next four rows of Table I contain hospitals categorized according to their geographic location: All urban, which is further divided into large urban and other urban; and rural. There are 2,539 hospitals located in urban areas included in our analysis. Among these, there are 1,406 hospitals located in large urban areas (populations over 1 million), and 1,133 hospitals in other urban areas (populations of 1 million or fewer). In addition, there are 995 hospitals in rural areas. The next two groupings are by bed size categories, shown separately for urban and rural hospitals. The final groupings by geographic location are by census divisions, also shown separately for urban and rural hospitals.

The second part of Table I shows hospital groups based on hospitals' FY 2008 payment classifications, including any reclassifications under section 1886(d)(10) of the Act. For example, the rows labeled urban, large urban, other urban, and rural show that the number of hospitals paid based on these categorizations after consideration of

geographic reclassifications (including reclassifications under section 1886(d)(8)(B) and section 1886(d)(8)(E) of the Act that have implications for capital payments) are 2,578, 1,425, 1,153, and 956, respectively.

The next three groupings examine the impacts of the changes on hospitals grouped by whether or not they have GME residency programs (teaching hospitals that receive an IME adjustment) or receive DSH payments, or some combination of these two adjustments. There are 2,480 nonteaching hospitals in our analysis, 815 teaching hospitals with fewer than 100 residents, and 239 teaching hospitals with 100 or more residents.

In the DSH categories, hospitals are grouped according to their DSH payment status, and whether they are considered urban or rural for DSH purposes. The next category groups together hospitals considered urban after geographic reclassification, in terms of whether they receive the IME adjustment, the DSH adjustment, both, or neither.

The next five rows examine the impacts of the changes on rural hospitals by special payment groups (SCHs, RRCs, and MDHs), as well as rural hospitals not receiving a special payment designation. There were 194 RRCs, 367 SCHs, 150 MDHs, 99 hospitals that are both SCHs and RRCs, and 8 hospitals that are both an MDH and an RRC.

The next series of groupings concern the geographic reclassification status of hospitals. The first grouping displays all urban hospitals that were reclassified by the MGRB for FY 2008. The second grouping shows the MGRB rural reclassifications.

The final two groupings are based on the type of ownership and the hospital's Medicare utilization expressed as a percent of total patient days. These data were taken from the FY 2004 Medicare cost reports.

TABLE I.—IMPACT ANALYSIS OF CHANGES FOR FY 2008

| | No. of hospitals | Previously published all FY 2008 changes w/ CMI adjustment prior to estimated growth ¹¹ | Current estimate of all FY 2008 changes w/ CMI adjustment prior to estimated growth ¹² | Previously published all FY 2008 changes w/ CMI adjustment and estimated growth ¹³ | Current estimate of all FY 2008 changes w/ CMI adjustment and estimated growth ¹⁴ |
|-------------------------|------------------|--|---|---|--|

¹¹ This column shows our previous estimate published in the second FY 2008 IPPS correction notice of the changes in payments from FY 2007 to FY 2008 including a 0.988 CMI adjustment for coding and documentation improvements that are anticipated with the adoption of the MS–DRGs prior to the estimated growth occurring. It also reflects all FY 2008 IPPS policies adopted in the FY 2008 IPPS final rule.

¹² This column shows our current estimate of the changes in payments from FY 2007 to FY 2008 including a 0.994 CMI adjustment for coding and documentation improvements that are anticipated with the adoption of the MS–DRGs prior to the estimated growth occurring. It also reflects all FY 2008 IPPS policies adopted in the FY 2008 IPPS final rule and this final rule.

¹³ This column shows our previous estimate published in CMS–1533–CN2 of the changes in payments from FY 2007 to FY 2008 including a .988 CMI adjustment and the estimated case-mix growth of 1.2 percent as a result of improvements in documentation and coding. It also reflects all FY 2008 IPPS policies adopted in the FY 2008 IPPS final rule.

¹⁴ This column shows our current estimate of the changes in payments from FY 2007 to FY 2008 including a .994 CMI adjustment and the estimated case-mix growth of 1.2 percent (when comparing column 2b to column 3b) as a result of improvements in documentation and coding. It also reflects all FY 2008 IPPS policies adopted in the FY 2008 IPPS final rule and this final rule.

a. Effects of All Changes With CMI Adjustment Prior to Estimated Growth (Columns 2a and 2b)

Columns 2a and 2b show our previously published and current estimates of the change in IPPS payments from FY 2007 to FY 2008, reflecting all FY 2008 IPPS policies including a documentation and coding adjustment to the FY 2008 rates, but not taking into account the expected 1.2 percent growth in case-mix due to the anticipated improvement in documentation and coding as a result of the MS–DRGs. Because columns 2a and 2b model the impact to include the documentation and coding adjustment for anticipated case-mix increase without accounting for the actual case-mix increase itself, these columns illustrate a total payment change that is less than what is anticipated to occur.

Column 2a shows our previously published estimate in the October 10, 2007 correction notice to the FY 2008

IPPS proposed rule based on the policies established in the FY 2008 IPPS final rule, including a –1.2 percent documentation and coding adjustment. Column 2b shows our current estimate based on the same FY 2008 IPPS payment policies, except it also includes the policy changes established in this final rule (that is, the statutorily mandated –0.6 percent documentation and coding adjustment and the change in policy of not applying the documentation and coding adjustment to the hospital specific rates). Column 2b also corrects for a technical error that occurred in the second FY 2008 IPPS correction notice that inadvertently overestimated FY 2008 payments to providers that receive the hospital specific rate.

Comparing columns 2a and 2b, the average increase in FY 2008 IPPS payment for all hospitals is approximately 0.6 percentage points higher than in the second FY 2008 IPPS correction notice, as would be expected

with the statutorily mandated change in the documentation and coding adjustment from –1.2 percent to –0.6 percent. As a result of the combination of the law change and a policy of not applying the documentation and coding adjustment to the hospital-specific rates for MDHs and SCHs, certain categories of hospitals (MDHs, SCHs, rural hospitals, and certain rural geographic areas with relatively large numbers of SCHs and MDHs) are estimated to experience an increase in their operating payments of slightly more than 0.6 percentage points compared with the policies articulated in the FY 2008 IPPS final rule. However, column 2b shows an increase in operating payments for these categories of hospitals of only about 0.2 to 0.5 percentage points greater than our previously published impact estimates in column 2a (rather than more than 0.6 percentage points) due to a technical error in our previously published impact estimates that had overstated the

FY 2008 increase in payments to these hospitals.

b. Effects of All Changes With CMI Adjustment and Estimated Growth (Column 3)

Columns 3a and 3b show our previously published and current estimates of the change in IPPS payments from FY 2007 to FY 2008, reflecting all FY 2008 IPPS policies including a documentation and coding adjustment to the FY 2008 rates and taking into account the expected 1.2 percent growth in case-mix in FY 2008 due to anticipated improvements in documentation and coding as a result of the MS-DRGs.

Column 3a shows our previously published estimate in the correction notice to the FY 2008 IPPS proposed rule of the FY 2008 increase in operating payments based on the policies established in the FY 2008 IPPS final rule, including a – 1.2 percent documentation and coding adjustment which is assumed to be fully offset by a 1.2 percent increase in case-mix. Column 3b shows our current estimate based on the same FY 2008 IPPS payment policies, except it also includes the policy changes established in this final rule (that is, the statutorily mandated – 0.6 percent documentation and coding adjustment and the change in policy of not applying the documentation and coding adjustment to the hospital-specific rates). In column 3b, even though the documentation and coding adjustment reduces the standardized amount by 0.6 percent, this column assumes a 1.2 percent increase in case-mix due to improved documentation and coding that is estimated to occur equally across all hospitals as determined by the Office of the Actuary. Furthermore, it assumes that a 1.2 percent increase in case-mix from improved documentation and coding will occur for hospitals that receive the hospital-specific rate. Similar to column 2b, column 3b also corrects for a technical error that occurred in the second FY 2008 IPPS correction notice that inadvertently overstated the FY 2008 increase in payments to providers that receive the hospital specific-rate.

Column 3b reflects our current estimate of the impact of all FY 2008 changes relative to FY 2007. The average increase for all hospitals is approximately 4.3 percent. This is a 0.6 percent increase in expected payments compared to the 3.7 percent average increase to all hospitals published in the second FY 2008 IPPS correction notice. This estimated increase in payments can be attributed to the statutorily mandated

change in the documentation and coding adjustment to the standardized amounts from – 1.2 percent to – 0.6 percent. As shown in table 1, columns 3a and 3b, most classes of hospitals are estimated to experience an additional 0.6 percent increase in payments in FY 2008 compared with our previously published estimates with the increases shown in the table sometimes appearing to be slightly more (0.7 percentage points) due to rounding. As noted previously, as a result of the combination of the law change and a policy change to not apply the documentation and coding adjustment to the hospital-specific rates for MDHs and SCHs, certain categories of hospitals (MDHs, SCHs, rural hospitals, and certain rural geographic areas with relatively large numbers of SCHs and MDHs) are estimated to experience an increase in their operating payments of slightly more than 0.6 percentage points compared with the policies articulated in the FY 2008 IPPS final rule. However, column 3b shows an increase in operating payments for these categories of hospitals of only about 0.1 to 0.5 percentage points greater than our previously published impact estimates in column 3a (rather than more than 0.6 percentage points) due to a technical error in our previously published impact estimates that had overstated the FY 2008 increase in payments to these hospitals.

6. Overall Conclusion

The IPPS changes we are making in this final rule will affect all classes of hospitals. All classes of hospitals are expected to experience increases in their FY 2008 IPPS payments as a result of the provisions of this final rule. Table I of this section demonstrates the statutorily mandated change to the documentation and coding adjustment applied to the standardized amount, the policy change of the nonapplication of the documentation and coding adjustment to the hospital-specific rate and all other policies reflected in the FY 2008 IPPS final rule. Table I also shows an overall increase of 4.3 percent in operating payments, an estimated increase of \$4.29 billion, which includes hospital reporting of quality data program costs (\$1.89 million) and all operating payment policies as described in this section XXIV.G. Capital payments are estimated to increase by 1.2 percent per case from FY 2007 to FY 2008. The average increase in FY 2008 capital IPPS payments for all hospitals is approximately 0.6 percentage points higher than in the second FY 2008 IPPS correction notice, as expected based on the statutorily

mandated change in the FY 2008 documentation and coding adjustment from – 1.2 percent to – 0.6 percent. Therefore, we project that capital payments will increase by \$342 million in FY 2008 compared to FY 2007. The operating and capital payments should result in a net increase of \$4.635 billion to IPPS providers. This is an additional increase in estimated payments by \$665 million compared to the estimated increase in payments published in the second FY 2008 IPPS correction notice. The discussions presented in the previous subsections, in combination with section XIX. of this final rule, constitute a regulatory impact analysis.

7. Accounting Statement

As required by OMB Circular A–4 (available at <http://www.whitehouse.gov/omb/circulars/a004/a-4.pdf>), in Table II below, we have prepared an accounting statement showing the classification of the expenditures associated with the IPPS provisions of this final rule. This table provides our best estimate of the increase in Medicare payments to providers from FY 2007 to FY 2008 as a result of the IPPS policies established in the FY 2008 IPPS final rule and in section XIX. of this final rule. All expenditures are classified as transfers to Medicare providers.

TABLE II.—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES FROM FY 2007 TO FY 2008

| Category | Transfers |
|---------------------------------|--|
| Annualized Monetized Transfers. | \$4.635 Billion. |
| From Whom to Whom | Federal Government to IPPS Medicare Providers. |
| Total | \$4.635 Billion. |

8. Executive Order 12866

In accordance with the provisions of Executive Order 12866, this final rule was reviewed by the Office of Management and Budget.

H. Impact of the Policy Revisions Related to Emergency Medicare GME Affiliated Groups for Hospitals in Certain Declared Emergency Areas

As we discussed in detail in section XX. of this document, we are issuing an interim final rule with comment period that modifies the current GME regulations as they apply to emergency Medicare GME affiliated groups to provide for greater flexibility in training residents in approved residency programs during times of disaster.

Specifically, the interim final rule with comment period modifies provisions for “emergency Medicare GME affiliated groups” to address the needs of teaching hospitals that are forced to find alternate training sites for residents that were displaced by a disaster.

1. Overall Impact

This interim final rule with comment period rule is not a major rule under Executive Order 12866 because we anticipate that the cost to the Medicare program will be negligible under the provisions included in this rule.

2. RFA

For purposes of the RFA, we believe that the impact on the affected hospitals will not be significant and will not affect a substantial number of small entities.

3. Small Rural Hospitals

For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area and has fewer than 100 beds. This interim final rule with comment period is not anticipated to have a significant effect on small rural hospitals because the provisions of this interim final rule with comment period are most likely to be used by large teaching hospitals that have established residency programs and the capacity to train a larger complement of displaced residents. The majority of this type of teaching hospital is located in non-rural areas.

4. Unfunded Mandates

Section 202 of the Unfunded Mandates Reform Act of 1995 requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of \$100 million in 1995 dollars, updated annually for inflation. That threshold level is currently approximately \$120 million. This interim final rule with comment period will not have an effect on State, local, or tribal governments in the aggregate and the private sector costs will be less than the \$120 million threshold.

5. Federalism

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. This interim final rule with comment period will not have a substantial effect on State or local governments.

6. Anticipated Effects

We believe that there are limited effects associated with modifying the existing emergency Medicare GME affiliation regulations to extend the effective period as well as to permit certain written agreements for training that occurs in the nonhospital setting to be submitted retroactively. We note that these changes do not allow hospitals to count for Medicare IME or direct GME payment purposes additional FTE residents that had not been counted by Medicare before a qualifying emergency. Hospitals participating in emergency Medicare GME affiliated groups are held to their respective FTE resident caps as specified by the emergency affiliation agreement. IME and direct GME payments to the hospitals under this provision will not be based upon any FTE residents in excess of the caps specified under the emergency Medicare GME affiliation agreements.

7. Alternatives Considered

We considered making no changes at this time to the existing emergency Medicare GME affiliation provisions. However, teaching hospitals affected by Hurricanes Katrina and Rita have reported to us that they are still experiencing difficulties in reestablishing their training programs and they have requested the extension of the effective period for emergency Medicare GME affiliation agreements to continue beyond June 30, 2008. We understand that GME programs in the affected area are finding it necessary to continue to adjust the location of resident training both within the emergency area and in other States, as affected hospitals in the section 1135 emergency area continue to reopen beds at different rates, and as feedback from accreditation surveys warrant educational adjustments. Extending the effective period of emergency Medicare GME affiliation agreements for two more academic years (for a total effective period of up to 5 academic years) would allow these hospitals the time to stabilize their training programs. Furthermore, we considered the option of extending the effective period for emergency Medicare GME affiliations for two additional academic years without limiting the out of State emergency affiliations to apply to only the residents that were immediately displaced following the disaster. However, we ultimately specified that in the additional 2 years, only the residents that were immediately displaced following the disaster would be eligible to participate in out of State emergency affiliations while residents

that entered the program after the disaster occurred would be limited to in State emergency affiliations. We believe that the policy established in this interim final rule with comment period extends additional flexibility while providing an incentive for home hospitals to bring displaced residents back to train in the State in which the home hospital is located, increasing the probability that the physicians would stay and practice locally after their training is completed. In addition, we believe that providing for flexibility in submitting written agreements after residents begin training in the nonhospital sites for hospitals participating in emergency Medicare GME affiliation agreements alleviates an additional deadline burden and allows appropriate GME payments to be made to those hospitals that are facing financial and programmatic hardships due to a disaster. We believe failure to apply the regulatory changes in this interim final rule with comment would be contrary to the public interest because hospitals affected by Hurricanes Katrina and Rita could otherwise face dramatic disruptions in their Medicare GME funding, with possible dire effects on their GME programs and financial stability.

8. Conclusion

For these reasons, we are not preparing analyses for either the RFA or section 1102(b) of the Act because we have determined that this interim final rule with comment period would not have a significant economic impact on a substantial number of small entities or a significant impact on the operations of a substantial number of small rural hospitals.

9. Executive Order 12866

In accordance with the provisions of Executive Order 12866, this interim final rule with comment period was reviewed by the Office of Management and Budget.

XXV. Waiver of Proposed Rulemaking, Waiver of Delay in Effective Date, and Retroactive Effective Date

A. Requirements for Waivers and Retroactive Rulemaking

We ordinarily publish a notice of proposed rulemaking in the **Federal Register** to provide for public comment before the provisions of a rule take effect in accordance with section 553(b) of the Administrative Procedure Act (APA). However, we can waive notice-and-comment procedures if the Secretary finds, for good cause, that the notice-and-comment process is impracticable,

unnecessary, or contrary to the public interest, and incorporates a statement of the finding and the reasons therefore in the rule. Section 553(d) of the APA also ordinarily requires a 30-day delay in effective date of final rules after the date of their publication. However, this 30-day delay in effective date can be waived if an agency finds for good cause that the delay is impracticable, unnecessary, or contrary to the public interest, and the agency incorporates a statement of the findings and its reasons in the rule issued. Moreover, section 1871(e)(1)(A) of the Act generally prohibits the Secretary from making retroactive substantive changes in policy unless retroactive application of the change is necessary to comply with statutory requirements or failure to apply the change retroactively would be contrary to the public interest.

B. IPPS Payment Rate Policies

We are waiving notice-and-comment procedures and the 30-day delay in effective date with respect to the revised payment factors, rates, and thresholds discussed in section XIX.B.1. of this final rule. In section XIX.B.1. of this final rule, we are revising certain payment factors, rates, and thresholds under the IPPS to reflect the changes to the documentation and coding adjustment mandated under section 7 of Public Law 110–90. The policies adopted in the FY 2008 IPPS final rule were subjected to notice-and-comment procedures. The payment factors, rates, and thresholds discussed in section XIX.B.1. of this final rule reflect the payment policies adopted in the FY 2008 IPPS final rule, but have been recalculated using the reduced coding and documentation adjustment to the standardized amounts. Therefore, we find that it would be unnecessary and contrary to the public interest to delay correction of payment factors and rates under the IPPS by undertaking further notice-and-comment procedures. For the same reasons, we are also waiving the 30-day delay in effective date with respect to the revised payment factors, rates, and thresholds discussed in section XIX.B.1. of this final rule. We believe that it is in the public interest to ensure that these revised payment factors, rates, and thresholds are effective as of the October 1, 2007 effective date of the FY 2008 IPPS final rule.

The revised payment factors, rates, and thresholds discussed in section XIX.B.1. of this final rule do not substantively change policies adopted in the FY 2008 IPPS final rule. Under section 7 of Public Law 110–90, we are required to reduce the documentation

and coding adjustment that we adopted in the FY 2008 IPPS final rule and, as a result, the standardized amounts for FY 2008 will be higher. In section XIX.B.1. of this final rule, we merely are announcing new payment factors, rates, and thresholds that result from applying the statutorily mandated documentation and coding adjustment of -0.6 percent to the payment policies we adopted in the FY 2008 IPPS final rule. Therefore, we do not believe these changes implicate section 1871(e)(1)(A) of the Act.

With respect to the application of the documentation and coding adjustment to hospital-specific rates discussed in section XIX.B.2. of this final rule, we are waiving notice-and-comment procedures, the 30-day delay in effective date, and making a retroactive substantive change to a policy adopted in the FY 2008 IPPS final rule. As discussed in section XIX.B.2. of this final rule, we believe that the policy we adopted in the FY 2008 IPPS final rule was not consistent with the plain meaning of section 1886(d)(3)(A)(vi) of the Act. Therefore, we are waiving notice-and-comment procedures with respect to this policy change because we believe it would be unnecessary and contrary to the public interest to undertake notice-and-comment procedures prior to changing our policy to make the policy consistent with the plain meaning of the statute. For the same reasons, we are waiving the 30-day delay in effective date because we believe it would be unnecessary and contrary to the public interest to delay the policy change beyond the October 1, 2007 effective date of the FY 2008 IPPS final rule. We are also applying this policy change retroactive to October 1, 2007 under section 1871(e)(1)(A)(i) of the Act because it would be contrary to the public interest for our policy not to be consistent with the plain meaning of the statute. Furthermore, because an adjustment to the hospital-specific rates to account for changes in documentation and coding is not authorized under section 1886(d)(3)(A)(vi) of the Act, retroactive application of this change is necessary to comply with the statute.

C. Medicare GME Affiliation Agreement Provisions

We find that failure to apply the provisions of this interim final rule with comment period retroactively to August 29, 2005, which is the first date on which there was an emergency area and emergency period under section 1135 of the Act resulting from the impact of Hurricane Katrina, would be contrary to the public interest. Due to the

infrastructure damage and disruption of operations experienced by medical facilities, and the consequent and continuing disruption in residency training, caused by Hurricanes Katrina and Rita in August of 2005, there is an urgent need for the regulation changes provided in this interim final rule with comment period to be applied retroactively. The existing regulations specify that the effective period for emergency Medicare GME affiliation agreements must end no later than June 30, 2008, even though many hospitals within the section 1135 emergency area have not fully recovered from the disruption caused by Hurricanes Katrina and Rita. Hospitals have informed CMS that it is critical for the permissible effective period for emergency Medicare GME affiliation agreements to be extended because the current regulations do not adequately address the continuing issues relating to Medicare GME payment policy faced by both home and host hospitals. Specifically, where home or host hospitals with valid emergency Medicare GME affiliation agreements have been training displaced residents in non-hospital sites at any time since August 29, 2005, the provisions in this interim final rule with comment period allow these home or host hospitals to submit written agreements or incur all or substantially all of the costs of the program at the nonhospital site retroactive to that date in order to permit the home or host hospitals to count the FTE residents training in non-hospital sites for direct GME and IME payment purposes. We believe failure to apply the regulatory changes contained in this interim final rule with comment period retroactively would be contrary to the public interest because hospitals whose graduate medical education programs were affected by Hurricanes Katrina and Rita could otherwise face dramatic disruptions in their Medicare GME funding, with possible dire effects on the residency training programs and financial stability of the hospitals, and possible adverse consequences for the Medicare program in terms of access to hospital and physician health care resources.

Furthermore, the training programs at many teaching hospitals in New Orleans and surrounding areas were temporarily closed or significantly reduced in the aftermath of the hurricanes, and the displaced residents were transferred to other hospitals to continue their training programs in other parts of the country. While some residents have returned to the hurricane-affected hospitals, others remain displaced from their home

hospitals to hospitals located out-of-state. Immediate regulatory changes are required in order to maintain Medicare GME funding relating to displaced residents training at various hospitals outside of the emergency area, and at the same time, to encourage re-establishment of residency training within the hurricane-affected State, and to assist home hospitals to rebuild incrementally their GME programs. Existing regulations relating to closed hospitals and closed residency training programs, and relating to regular and emergency Medicare GME affiliation agreements, as well as to residency training that occurs in non-hospital settings, contain certain limitations that render them inapplicable or ineffective to address the issues faced by hospitals as a result of disruptions caused by Hurricanes Katrina and Rita.

We also ordinarily publish a notice of proposed rulemaking in the **Federal Register** and invite public comment on the proposed rule. The notice of proposed rulemaking includes a reference to the legal authority under which the rule is proposed, and the terms and substance of the proposed rule or a description of the subjects and issues involved. However, this procedure can be waived if an agency finds good cause that a notice-and-comment procedure is impracticable, unnecessary or contrary to the public interest and incorporates a statement of the finding and supporting reasons in the rule issued. We find that good cause exists to waive the requirement for publication of a notice of proposed rulemaking and public comment prior to the effective date of this rule because such a procedure would be impracticable and contrary to the public interest. As explained above, in order to respond to the urgent needs of the hospitals and GME programs affected by Hurricanes Katrina and Rita, particularly in the provision regarding the retroactive submission of written agreements or payment of all or substantially all of the costs of the program at the non-hospital site to allow hospitals that have been training residents in non-hospital sites since the first day of the section 1135 emergency period relating to Hurricanes Katrina and Rita on August 29, 2005, it is necessary for the regulation to take effect retroactively to August 29, 2005. Furthermore, as hospitals engage in planning for the training of residents in programs for the upcoming academic year which begins on July 1, 2008, hospitals need adequate time to arrange emergency Medicare GME affiliation agreements with respect to remaining

displaced residents training at host hospitals. The ordinary notice-and-comment procedures would serve to delay (or, in certain cases, preclude) hurricane-affected hospitals and GME programs from responding effectively to their circumstances by availing themselves of the flexibility permitted under this interim final rule with comment period.

List of Subjects

42 CFR Part 410

Health facilities, Health professions, Laboratories, Medicare, Rural areas, X rays

42 CFR Part 411

Kidney diseases, Medicare, Physician referral, Reporting and recordkeeping requirements

42 CFR Part 413

Health facilities, Kidney diseases, Medicare, Puerto Rico, Reporting and recordkeeping requirements.

42 CFR Part 414

Administrative practice and procedure, Health facilities, Health professions, Kidney diseases, Medicare, Reporting and recordkeeping requirements

42 CFR Part 416

Health facilities, Kidney diseases, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 419

Hospitals, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 482

Grant program-health, Hospitals, Medicaid, Medicare, Reporting and recordkeeping requirements

42 CFR Part 485

Grant program-health, Health facilities, Medicaid, Medicare, Reporting and recordkeeping requirements.

■ For reasons stated in the preamble of this final rule with comment period, the Centers for Medicare & Medicaid Services is amending 42 CFR Chapter IV as set forth below:

PART 410—SUPPLEMENTARY MEDICAL INSURANCE (SMI) BENEFITS

■ 1. The authority citation for Part 410 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

■ 2. Section 410.27 is amended by—

- a. Revising paragraph (a)(1)(iii).
- b. Revising paragraph (f).

The revisions read as follows:

§ 410.27 Outpatient hospital services and supplies incident to a physician service: Conditions.

(a) * * *

(1) * * *

(iii) In the hospital or at a department of a provider, as defined in § 413.65(a)(2) of this subchapter, that has provider-based status in relation to a hospital under § 413.65 of this subchapter; and

* * * * *

(f) Services furnished at a department of a provider, as defined in § 413.65(a)(2) of this subchapter, that has provider-based status in relation to a hospital under § 413.65 of this subchapter, must be under the direct supervision of a physician. "Direct supervision" means the physician must be present and on the premises of the location and immediately available to furnish assistance and direction throughout the performance of the procedure. It does not mean that the physician must be present in the room when the procedure is performed.

PART 411—EXCLUSIONS FROM MEDICARE AND LIMITATIONS ON MEDICARE PAYMENT

■ 3. The authority citation for Part 411 continues to read as follows:

Authority: Secs. 1102, 1860D–1 through 1860D–42, 1871, and 1877 of the Social Security Act (42 U.S.C. 1302, 1395w–101 through 1395w–152, and 1395nn).

■ 4. Section 411.351 is amended by revising paragraph (2) of the definition of "designated health services" and the definitions of "outpatient prescription drugs" and "radiology and certain other imaging services" to read as follows:

§ 411.351 Definitions.

* * * * *

Designated health services (DHS) means * * *

(2) Except as otherwise noted in this subpart, the term "designated health services" or DHS means only DHS payable, in whole or in part, by Medicare. DHS do not include services that are reimbursed by Medicare as part of a composite rate (for example, SNF Part A payments or ASC services identified at § 416.164(a)), except to the extent that services listed in paragraphs (1)(i) through (1)(x) of this definition are themselves payable through a composite rate (for example, all services provided as home health services or inpatient and outpatient hospital services are DHS).

* * * * *

Outpatient prescription drugs means all drugs covered by Medicare Part B or D, except for those drugs that are "covered ancillary services," as defined at § 416.164(b) of this chapter, for which separate payment is made to an ambulatory surgical center.

* * * * *

Radiology and certain other imaging services means those particular services so identified on the List of CPT/HCPCS Codes. All services identified on the List of CPT/HCPCS Codes are radiology and certain other imaging services for purposes of this subpart. Any service not specifically identified as radiology and certain other imaging services on the List of CPT/HCPCS Codes is not a radiology or certain other imaging service for purposes of this subpart. The list of codes identifying radiology and certain other imaging services includes the professional and technical components of any diagnostic test or procedure using x-rays, ultrasound, computerized axial tomography, magnetic resonance imaging, nuclear medicine (effective January 1, 2007), or other imaging services. All codes identified as radiology and certain other imaging services are covered under section 1861(s)(3) of the Act and § 410.32 and § 410.34 of this chapter, but do not include—

(1) X-ray, fluoroscopy, or ultrasound procedures that require the insertion of a needle, catheter, tube, or probe through the skin or into a body orifice;

(2) Radiology or certain other imaging services that are integral to the performance of a medical procedure that is not identified on the list of CPT/HCPCS codes as a radiology or certain other imaging service and is performed—

(i) Immediately prior to or during the medical procedure; or

(ii) Immediately following the medical procedure when necessary to confirm placement of an item placed during the medical procedure.

(3) Radiology and certain other imaging services that are "covered ancillary services," as defined at § 416.164(b), for which separate payment is made to an ASC.

* * * * *

PART 413—PRINCIPLES OF REASONABLE COST REIMBURSEMENT; PAYMENT FOR END-STAGE RENAL DISEASE SERVICES; PROSPECTIVELY DETERMINED PAYMENT RATES FOR SKILLED NURSING FACILITIES

■ 5. The authority citation for Part 413 is revised to read as follows:

Authority: Secs. 1102, 1812(d), 1814(b), 1815, 1833(a), (i), and (n), 1861(v), 1871, 1881, 1883, and 1886 of the Social Security Act (42 U.S.C. 1302, 1395d(d), 1395f(b), 1395g, 1395l(a), (i), and (n), 1395x(v), 1395hh, 1395rr, 1395tt, and 1395ww); and sec. 124 of Public Law 106–133 (113 Stat. 1501A–332).

■ 6. Section 413.75(b) is amended by revising paragraph (2) under the definition of "Emergency Medicare GME affiliated group" to read as follows:

§ 413.75 Direct GME payments: General requirements.

* * * * *

(b) * * *
Emergency Medicare GME affiliated group * * *

(2) *Host hospital* means a hospital training residents displaced from a home hospital.

(a) *In-State host hospital* means a host hospital located in the same State as a home hospital.

(b) *Out-of-State host hospital* means a host hospital located in a different State from the home hospital.

* * * * *

■ 7. Section 413.78 is amended by—

■ a. Removing the semicolon and the word "or" at the end of paragraph (e)(3)(i) and replacing them with a period.

■ b. Adding a new paragraph (e)(3)(iii).

■ c. Removing the semicolon and the word "or" at the end of paragraph (f)(3)(i) and replacing them with a period.

■ d. Adding a new paragraph (f)(3)(iii).

The additions read as follows:

§ 413.78 Direct GME payments: Determination of the total number of FTE residents.

* * * * *

(e) * * *

(3) * * *

(iii) If the hospital has in place an emergency Medicare GME affiliation agreement in accordance with § 413.79(f)(6), during the period covered by the emergency Medicare GME affiliation agreement—

(A) The hospital must pay all or substantially all of the costs of the training program in a nonhospital setting(s) attributable to training that occurs during a month by the end of the sixth month following the month in which the training in the nonhospital site occurred. For the costs that would otherwise be required to be paid by the hospital during the period of August 29, 2005 through November 1, 2007, the participating hospital must pay the costs by April 29, 2008; or

(B) There is a written agreement that specifies that the hospital is incurring

the cost of the resident's salary and fringe benefits while the resident is training in the nonhospital site and the hospital is providing reasonable compensation to the nonhospital site for supervisory teaching activities. The agreement must indicate the compensation the hospital is providing to the nonhospital site for supervisory teaching activities. The written agreement must be submitted to the contractor by 180 days after the training at the nonhospital site begins. For written agreements that would otherwise be required to be submitted prior to the date the resident(s) begin training at the nonhospital site during the period of August 29, 2005 through November 1, 2007, the written agreement must be submitted to the CMS contractor by April 29, 2008.

* * * * *

(f) * * *

(3) * * *

(iii) If the hospital has in place an emergency Medicare GME affiliation agreement in accordance with § 413.79(f)(6), during the period covered by the emergency Medicare GME affiliation agreement—

(A) The hospital must pay all or substantially all of the costs of the training program in a nonhospital setting(s) attributable to training that occurs during a month by the end of the sixth month after the month in which the training in the nonhospital site occurs. For the costs that would otherwise be required to be incurred by the hospital during the period of August 29, 2005 through November 1, 2007, the participating hospital must incur the costs by April 29, 2008; or

(B) There is a written agreement that specifies that the hospital will incur at least 90 percent of the total of the costs of the resident's salary and fringe benefits (and travel and lodging where applicable) while the resident is training in the nonhospital site and the portion of the cost of the teaching physician's salary attributable to nonpatient care direct GME activities. The written agreement must specify the total cost of the training program at the nonhospital site, and the amount the hospital will incur (at least 90 percent of the total), and must indicate the portion of the amount the hospital will incur that reflects residents' salaries and fringe benefits (and travel and lodging where applicable), and the portion of this amount that reflects teaching physician compensation. The written agreement must be submitted to the contractor by 180 days after the training at the nonhospital site begins. Hospitals may modify the amounts specified in the

written agreement by the end of the academic year (that is, June 30) to reflect that at least 90 percent of the costs of the training program in the nonhospital site has been incurred. For written agreements that would otherwise be required to be submitted prior to the date the training begins in the nonhospital site during the period of August 29, 2005 through November 1, 2007, the hospital must submit the written agreement to its contractor by April 29, 2008.

* * * * *

■ 8. Section 413.79 is amended by—

■ a. Revising the introductory text of paragraph (f)(6).

■ b. Revising paragraph (f)(6)(i)(D).

■ c. Revising paragraph (f)(6)(ii)(A)(2).

The revisions read as follows:

§ 413.79 Direct GME payments: Determination of the weighted number of FTE residents.

* * * * *

(f) * * *

(6) *Emergency Medicare GME affiliated group.* Effective on or after August 29, 2005, home and host hospitals as defined in § 413.75(b) may form an emergency Medicare GME affiliated group by meeting the requirements provided in this section. The emergency Medicare GME affiliation agreements may be made effective beginning on or after the first day of a section 1135 emergency period, and must terminate no later than at the conclusion of 4 academic years following the academic year during which the section 1135 emergency period began.

* * * * *

(i) * * *

(D) Specify the total adjustment to each participating hospital's FTE caps in each academic year that the emergency Medicare GME affiliation agreement is in effect, for both direct GME and IME, that reflects a positive adjustment to the host hospital's direct and indirect FTE caps that is offset by a negative adjustment to the home hospital's (or hospitals') direct and indirect FTE caps of at least the same amount subject to the following—

(1) The sum total of adjustments to all the participating hospitals' FTE caps under the emergency Medicare GME affiliation agreement may not exceed the aggregate adjusted FTE caps of the hospitals participating in the emergency Medicare GME affiliated group.

(2) A home hospital's IME and direct GME FTE cap reductions in an emergency Medicare GME affiliation agreement are limited to the home hospital's IME and direct GME FTE

resident caps at § 413.79(c) or § 413.79(f)(1) through (f)(5), that is, as adjusted by any and all existing affiliation agreements as applicable.

(3) For emergency Medicare GME affiliation agreements for the third or fourth academic years subsequent to the year in which the section 1135 emergency period began and involving an out-of-State host hospital, the positive adjustment to the out-of-State host hospital's direct and indirect FTE caps pursuant to the agreement shall reflect only FTE residents that were actually displaced from a home hospital immediately following the emergency.

* * * * *

(ii) * * *

(A) * * *

(2) *Four subsequent academic years.* The later of 180 days after the section 1135 emergency period begins, or by July 1 of each academic year for 4 subsequent years.

* * * * *

PART 414—PAYMENT FOR PART B MEDICAL AND OTHER HEALTH SERVICES

■ 9. The authority citation for Part 414 continues to read as follows:

Authority: Secs. 1102, 1871, and 1881(b)(1) of the Social Security Act (42 U.S.C. 1302, 1395hh, and 1395rr(b)(1)).

■ 10. Section 414.22 is amended by revising paragraphs (b)(5)(i)(A) and (B) to read as follows:

§ 414.22 Relative value units (RVUs).

* * * * *

(b) * * *

(5) * * *

(i) * * *

(A) *Facility practice expense RVUs.* The lower facility practice expense RVUs apply to services furnished to patients in the hospital, skilled nursing facility, community mental health center, or in an ambulatory surgical center. (The facility practice expense RVUs for a particular code may not be greater than the nonfacility RVUs for the code.)

(B) *Nonfacility practice expense RVUs.* The higher nonfacility practice expense RVUs apply to services performed in a physician's office, a patient's home, a nursing facility, or a facility or institution other than a hospital or skilled nursing facility, community mental health center, or ASC.

* * * * *

PART 416—AMBULATORY SURGICAL SERVICES

■ 11. The authority citation for Part 416 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

■ 12. Section 416.179 is amended by—

■ a. Revising the section heading.

■ b. Revising paragraphs (a)(1) and (a)(2).

■ c. Adding new paragraph (a)(3).

■ d. Revising paragraph (b).

The revisions and additions read as follows:

§ 416.179 Payment and coinsurance reduction for devices replaced without cost or when full or partial credit is received.

(a) * * *

(1) The device is replaced without cost to the ASC or the beneficiary;

(2) The ASC receives full credit for the cost of a replaced device; or

(3) The ASC receives partial credit for the cost of a replaced device but only where the amount of the device credit is greater than or equal to 50 percent of the cost of the new replacement device being implanted.

(b) *Amount of reduction to the ASC payment for the covered surgical procedure.*

(1) The amount of the reduction to the ASC payment made under paragraphs (a)(1) and (a)(2) of this section is calculated in the same manner as the device payment reduction that would be applied to the ASC payment for the covered surgical procedure in order to remove predecessor device costs so that the ASC payment amount for a device with pass-through status under § 419.66 of this subchapter represents the full cost of the device, and no packaged device payment is provided through the ASC payment for the covered surgical procedure.

(2) The amount of the reduction to the ASC payment made under paragraph (a)(3) of this section is 50 percent of the payment reduction that would be calculated under paragraph (b)(1) of this section.

* * * * *

PART 419—PROSPECTIVE PAYMENT SYSTEM FOR HOSPITAL OUTPATIENT DEPARTMENT SERVICES

■ 13. The authority citation for Part 419 continues to read as follows:

Authority: Secs. 1102, 1833(t), and 1871 of the Social Security Act (42 U.S.C. 1302, 1395l(t), and 1395hh).

■ 14. Section 419.43 is amended by revising paragraph (g)(4) to read as follows:

§ 419.43 Adjustments to national program payment and beneficiary copayment amounts.

* * * *

(g) * * *

(4) Excluded services and groups.

Drugs and biologicals that are paid under a separate APC and devices paid under § 419.66 are excluded from qualification for the payment adjustment in paragraph (g)(2) of this section.

* * * *

■ 15. Section 419.44 is amended by—**■ a. Revising the section heading.****■ b. Revising paragraph (b).**

The revisions and addition read as follows:

§ 419.44 Payment reductions for procedures.

* * * *

(b) *Interrupted procedures.* When a procedure is terminated prior to completion due to extenuating circumstances or circumstances that threaten the well-being of the patient, the Medicare program payment amount and the beneficiary copayment amount are based on—

(1) The full program and beneficiary copayment amounts if the procedure for which anesthesia is planned is discontinued after the induction of anesthesia or after the procedure is started;

(2) One-half the full program and the beneficiary copayment amounts if the procedure for which anesthesia is planned is discontinued after the patient is prepared and taken to the room where the procedure is to be performed but before anesthesia is induced; or

(3) One-half of the full program and beneficiary copayment amounts if a procedure for which anesthesia is not planned is discontinued after the patient is prepared and taken to the room where the procedure is to be performed.

■ 16. Section 419.45 is amended by—**■ a. Revising the section heading.****■ b. Revising paragraph (a)(1).****■ c. Revising paragraph (a)(2).****■ d. Adding new paragraph (a)(3).****■ e. Revising paragraph (b).**

The revisions and additions read as follows:

§ 419.45 Payment and copayment reduction for devices replaced without cost or when full or partial credit is received.

(a) * * *

(1) The device is replaced without cost to the provider or the beneficiary;

(2) The provider receives full credit for the cost of a replaced device; or

(3) The provider receives partial credit for the cost of a replaced device

but only where the amount of the device credit is greater than or equal to 50 percent of the cost of the new replacement device being implanted.

(b) Amount of reduction to the APC payment.

(1) The amount of the reduction to the APC payment made under paragraphs (a)(1) and (a)(2) of this section is calculated in the same manner as the offset amount that would be applied if the device implanted during a procedure assigned to the APC had transitional pass-through status under § 419.66.

(2) The amount of the reduction to the APC payment made under paragraph (a)(3) of this section is 50 percent of the offset amount that would be applied if the device implanted during a procedure assigned to the APC had transitional pass-through status under § 419.66.

* * * *

§ 419.70 [Amended]**■ 17. Section 419.70 is amended by—**

■ a. In paragraph (d)(1)(i), removing the cross-reference “§ 412.63(b)” and adding the cross-reference “§ 412.64(b)” in its place.

■ b. In paragraph (d)(2)(i), removing the cross-reference “§ 412.63(b)” and adding the cross-reference “§ 412.64(b)” in its place.

■ c. In paragraph (d)(4)(ii), removing the cross-reference “§ 412.63(b)” and adding the phrase “§ 412.63(b) or § 412.64(b), as applicable,” in its place.

PART 482—CONDITIONS OF PARTICIPATION FOR HOSPITALS**■ 18. The authority citation for Part 482 continues to read as follows:**

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

■ 19. Section 482.22 is amended by revising paragraph (c)(5) to read as follows:

§ 482.22 Condition of participation: Medical staff.

* * * *

(c) * * *

(5) Include a requirement that—

(i) A medical history and physical examination be completed and documented for each patient no more than 30 days before or 24 hours after admission or registration, but prior to surgery or a procedure requiring anesthesia services. The medical history and physical examination must be completed and documented by a physician (as defined in section 1861(r) of the Act), an oromaxillofacial surgeon, or other qualified licensed individual in

accordance with State law and hospital policy.

(ii) An updated examination of the patient, including any changes in the patient's condition, be completed and documented within 24 hours after admission or registration, but prior to surgery or a procedure requiring anesthesia services, when the medical history and physical examination are completed within 30 days before admission or registration. The updated examination of the patient, including any changes in the patient's condition, must be completed and documented by a physician (as defined in section 1861(r) of the Act), an oromaxillofacial surgeon, or other qualified licensed individual in accordance with State law and hospital policy.

* * * *

§ 482.23 [Amended]

■ 20. In § 482.23(b)(1), the cross-reference “§ 405.1910(c)” is removed and the cross-reference “§ 488.54(c)” is added in its place.

■ 21. Section 482.24 is amended by revising paragraph (c)(2)(i) to read as follows:

§ 482.24 Condition of participation: Medical record services.

* * * *

(c) * * *

(2) * * *

(i) Evidence of—

(A) A medical history and physical examination completed and documented no more than 30 days before or 24 hours after admission or registration, but prior to surgery or a procedure requiring anesthesia services. The medical history and physical examination must be placed in the patient's medical record within 24 hours after admission or registration, but prior to surgery or a procedure requiring anesthesia services.

(B) An updated examination of the patient, including any changes in the patient's condition, when the medical history and physical examination are completed within 30 days before admission or registration. Documentation of the updated examination must be placed in the patient's medical record within 24 hours after admission or registration, but prior to surgery or a procedure requiring anesthesia services.

* * * *

■ 22. Section 482.51 is amended by revising paragraph (b)(1) to read as follows:

§ 482.51 Condition of participation: Surgical services.

* * * *

(b) * * *

(1) Prior to surgery or a procedure requiring anesthesia services and except in the case of emergencies:

(i) A medical history and physical examination must be completed and documented no more than 30 days before or 24 hours after admission or registration.

(ii) An updated examination of the patient, including any changes in the patient's condition, must be completed and documented within 24 hours after admission or registration when the medical history and physical examination are completed within 30 days before admission or registration.

* * * * *

■ 23. Section 482.52 is amended by—

■ a. Revising paragraph (b)(1).

■ b. Revising paragraph (b)(3).

■ c. Removing paragraph (b)(4).

The revisions read as follows:

§ 482.52 Condition of participation: Anesthesia services.

* * * * *

(b) * * *

(1) A preanesthesia evaluation completed and documented by an individual qualified to administer anesthesia, as specified in paragraph (a) of this section, performed within 48 hours prior to surgery or a procedure requiring anesthesia services.

* * * * *

(3) A postanesthesia evaluation completed and documented by an individual qualified to administer anesthesia, as specified in paragraph (a) of this section, no later than 48 hours after surgery or a procedure requiring anesthesia services. The postanesthesia evaluation for anesthesia recovery must be completed in accordance with State law and with hospital policies and procedures that have been approved by

the medical staff and that reflect current standards of anesthesia care.

* * * * *

PART 485—CONDITIONS OF PARTICIPATION: SPECIALIZED PROVIDERS

■ 24. The authority citation for Part 485 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

■ 25. Section 485.610 is amended by adding new paragraph (e) to read as follows:

§ 485.610 Condition of participation: Status and location.

* * * * *

(e) *Standard: Off-campus and co-location requirements for CAHs.* A CAH may continue to meet the location requirement of paragraph (c) of this section based only if the CAH meets the following:

(1) If a CAH with a necessary provider designation is co-located (that is, it shares a campus, as defined in § 413.65(a)(2) of this chapter, with another hospital or CAH), the necessary provider CAH can continue to meet the location requirement of paragraph (c) of this section only if the co-location arrangement was in effect before January 1, 2008, and the type and scope of services offered by the facility co-located with the necessary provider CAH do not change. A change of ownership of any of the facilities with a co-location arrangement that was in effect before January 1, 2008, will not be considered to be a new co-location arrangement.

(2) If a CAH or a necessary provider CAH operates an off-campus provider-based location, excluding an RHC as defined in § 405.2401(b) of this chapter, but including a department or remote

location, as defined in § 413.65(a)(2) of this chapter, or an off-campus distinct part psychiatric or rehabilitation unit, as defined in § 485.647, that was created or acquired by the CAH on or after January 1, 2008, the CAH can continue to meet the location requirement of paragraph (c) of this section only if the off-campus provider-based location or off-campus distinct part unit is located more than a 35-mile drive (or, in the case of mountainous terrain or in areas with only secondary roads available, a 15-mile drive) from a hospital or another CAH.

(3) If either a CAH or a CAH that has been designated as a necessary provider by the State does not meet the requirements in paragraph (e)(1) of this section, by co-locating with another hospital or CAH on or after January 1, 2008, or creates or acquires an off-campus provider-based location or off-campus distinct part unit on or after January 1, 2008, that does not meet the requirements in paragraph (e)(2) of this section, the CAH's provider agreement will be subject to termination in accordance with the provisions of § 489.53(a)(3) of this subchapter, unless the CAH terminates the off-campus arrangement or the co-location arrangement, or both.

Note: The Medicare program payment is 80 percent of the total payment amount and beneficiary coinsurance is 20 percent of the total payment amount, except for screening flexible sigmoidoscopies and screening colonoscopies for which the program payment is 75 percent and the beneficiary coinsurance is 25 percent.

* Refers to HCPSC codes designated as "office-based," whose designation as office-based is temporary because we have insufficient claims data. We will reconsider this designation when new claims data become available.

ADDENDUM D1.—OPPS PAYMENT STATUS INDICATORS

| Indicator | Item/code/service | OPPS payment status |
|-----------|---|--|
| A | Services furnished to a hospital outpatient that are paid under a fee schedule or payment system other than OPPS, for example: <ul style="list-style-type: none"> • Ambulance Services. • Clinical Diagnostic Laboratory Services • Non-Implantable Prosthetic and Orthotic Devices. • EPO for ESRD Patients. • Physical, Occupational, and Speech Therapy. • Routine Dialysis Services for ESRD Patients Provided in a Certified Dialysis Unit of a Hospital. • Diagnostic Mammography. • Screening Mammography | Not paid under OPPS. Paid by fiscal intermediaries/MACs under a fee schedule or payment system other than OPPS. Not subject to deductible or coinsurance. Not subject to deductible. |
| B | Codes that are not recognized by OPPS when submitted on an outpatient hospital Part B bill type (12x and 13x). | Not paid under OPPS. <ul style="list-style-type: none"> • May be paid by fiscal intermediaries/MACs when submitted on a different bill type, for example, 75x (CORF), but not paid under OPPS. • An alternate code that is recognized by OPPS when submitted on an outpatient hospital Part B bill type (12x and 13x) may be available. |
| C | Inpatient Procedures | Not paid under OPPS. Admit patient. Bill as inpatient. |
| D | Discontinued Codes | Not paid under OPPS or any other Medicare payment system. |
| E | Items, Codes, and Services: <ul style="list-style-type: none"> • That are not covered by Medicare based on statutory exclusion. • That are not covered by Medicare for reasons other than statutory exclusion. • That are not recognized by Medicare but for which an alternate code for the same item or service may be available. • For which separate payment is not provided by Medicare. | Not paid under OPPS or any other Medicare payment system. |
| F | Corneal Tissue Acquisition; Certain CRNA Services and Hepatitis B Vaccines. | Not paid under OPPS. Paid at reasonable cost. |
| G | Pass-Through Drugs and Biologicals | Paid under OPPS; separate APC payment includes pass-through amount. |

ADDENDUM D1.—OPPS PAYMENT STATUS INDICATORS—Continued

| Indicator | Item/code/service | OPPS payment status |
|-----------|--|--|
| H | Pass-Through Device Categories | Separate cost-based pass-through payment; not subject to copayment. |
| K | (1) Nonpass-Through Drugs and Biologicals (2) Therapeutic Radiopharmaceuticals (3) Brachytherapy Sources (4) Blood and Blood Products | (1) Paid under OPPS; separate APC payment. (2) Paid under OPPS; separate APC payment. (3) Paid under OPPS; separate APC payment. (4) Paid under OPPS; separate APC payment. |
| L | Influenza Vaccine; Pneumococcal Pneumonia Vaccine | Not paid under OPPS. Paid at reasonable cost; not subject to deductible or coinsurance. |
| M | Items and Services Not Billable to the Fiscal Intermediary/MAC. | Not paid under OPPS. |
| N | Items and Services Packaged into APC Rates | Paid under OPPS; payment is packaged into payment for other services, including outliers. Therefore, there is no separate APC payment. |
| P | Partial Hospitalization | Paid under OPPS; per diem APC payment. |
| Q | Packaged Services Subject to Separate Payment under OPPS Payment Criteria. | Paid under OPPS; Addendum B displays APC assignments when services are separately payable. (1) Separate APC payment based on OPPS payment criteria. (2) If criteria are not met, payment is packaged into payment for other services, including outliers. Therefore, there is no separate APC payment. |
| S | Significant Procedure, Not Discounted when Multiple | Paid under OPPS; separate APC payment. |
| T | Significant Procedure, Multiple Reduction Applies | Paid under OPPS; separate APC payment. |
| V | Clinic or Emergency Department Visit | Paid under OPPS; separate APC payment. |
| X | Ancillary Services | Paid under OPPS; separate APC payment. |
| Y | Non-Implantable Durable Medical Equipment | Not paid under OPPS. All institutional providers other than home health agencies bill to DMERC. |

ADDENDUM DD1.—ASC PAYMENT INDICATORS

| Indicator | Payment indicator definition |
|-----------|--|
| A2 | Surgical procedure on ASC list in CY 2007; payment based on OPPS relative payment weight. |
| D5 | Deleted/discontinued code; no payment made. |
| F4 | Corneal tissue acquisition; paid at reasonable cost. |
| G2 | Non office-based surgical procedure added in CY 2008 or later; payment based on OPPS relative payment weight. |
| H2 | Brachytherapy source paid separately when provided integral to a surgical procedure on ASC list; payment based on OPPS rate. |
| H8 | Device-intensive procedure on ASC list in CY 2007; paid at adjusted rate. |
| J7 | OPPS pass-through device paid separately when provided integral to a surgical procedure on ASC list; payment contractor-priced. |
| J8 | Device-intensive procedure added to ASC list in CY 2008 or later; paid at adjusted rate. |
| K2 | Drugs and biologicals paid separately when provided integral to a surgical procedure on ASC list; payment based on OPPS rate. |
| K7 | Unclassified drugs and biologicals; payment contractor-priced. |
| L6 | New Technology Intraocular Lens (NTIOL); special payment. |
| N1 | Packaged service/item; no separate payment made. |
| P2 | Office-based surgical procedure added to ASC list in CY 2008 or later with MPFS nonfacility PE RVUs; payment based on OPPS relative payment weight. |
| P3 | Office-based surgical procedure added to ASC list in CY 2008 or later with MPFS nonfacility PE RVUs; payment based on MPFS nonfacility PE RVUs. |
| R2 | Office-based surgical procedure added to ASC list in CY 2008 or later without MPFS nonfacility PE RVUs; payment based on OPPS relative payment weight. |
| Z2 | Radiology service paid separately when provided integral to a surgical procedure on ASC list; payment based on OPPS relative payment weight. |
| Z3 | Radiology service paid separately when provided integral to a surgical procedure on ASC list; payment based on MPFS nonfacility PE RVUs. |

ADDENDUM DD2.—OPPS COMMENT INDICATORS

| Comment indicator | Descriptor |
|-------------------|---|
| CH | Active HCPCS code in current year and next calendar year, status indicator and/or APC assignment has changed; or active HCPCS code that will be discontinued at the end of the current calendar year. |
| NI | New code, interim APC assignment; comments will be accepted on the interim APC assignment for the new code. |

ADDENDUM DD2.—ASC COMMENT INDICATORS

| Comment indicator | Descriptor |
|-------------------|--|
| CH | Active HCPCS code in current year and next calendar year, payment indicator has changed; or active HCPCS code that is newly recognized as payable in an ASC; or active HCPCS code that will be discontinued at the end of the current calendar year. |
| NI | New code, interim payment; comments will be accepted on the interim payment indicator for the new code. |

ADDENDUM E.—HCPCS CODES THAT ARE PAID ONLY AS INPATIENT PROCEDURES FOR CY 2008

| HCPCS code | Short descriptor | SI | CI |
|-------------|------------------------------------|---------|-------|
| 00176 | Anesth, pharyngeal surgery | C | |
| 00192 | Anesth, facial bone surgery | C | |
| 00214 | Anesth, skull drainage | C | |
| 00215 | Anesth, skull repair/fract | C | |
| 00452 | Anesth, surgery of shoulder | C | |
| 00474 | Anesth, surgery of rib(s) | C | |
| 00524 | Anesth, chest drainage | C | |
| 00540 | Anesth, chest surgery | C | |
| 00542 | Anesth, release of lung | C | |
| 00546 | Anesth, lung,chest wall surg | C | |
| 00560 | Anesth, heart surg w/o pump | C | |
| 00561 | Anesth, heart surg < age 1 | C | |
| 00562 | Anesth, heart surg w/pump | C | |
| 00580 | Anesth, heart/lung transplnt | C | |
| 00604 | Anesth, sitting procedure | C | |
| 00622 | Anesth, removal of nerves | C | |
| 00632 | Anesth, removal of nerves | C | |
| 00670 | Anesth, spine, cord surgery | C | |
| 00792 | Anesth, hemorr/excise liver | C | |
| 00794 | Anesth, pancreas removal | C | |
| 00796 | Anesth, for liver transplant | C | |
| 00802 | Anesth, fat layer removal | C | |
| 00844 | Anesth, pelvis surgery | C | |
| 00846 | Anesth, hysterectomy | C | |
| 00848 | Anesth, pelvic organ surg | C | |
| 00864 | Anesth, removal of bladder | C | |
| 00865 | Anesth, removal of prostate | C | |
| 00866 | Anesth, removal of adrenal | C | |
| 00868 | Anesth, kidney transplant | C | |
| 00882 | Anesth, major vein ligation | C | |
| 00904 | Anesth, perineal surgery | C | |
| 00908 | Anesth, removal of prostate | C | |
| 00932 | Anesth, amputation of penis | C | |
| 00934 | Anesth, penis, nodes removal | C | |
| 00936 | Anesth, penis, nodes removal | C | |
| 00944 | Anesth, vaginal hysterectomy | C | |
| 01140 | Anesth, amputation at pelvis | C | |
| 01150 | Anesth, pelvic tumor surgery | C | |
| 01212 | Anesth, hip disarticulation | C | |
| 01214 | Anesth, hip arthroplasty | C | |
| 01232 | Anesth, amputation of femur | C | |
| 01234 | Anesth, radical femur surg | C | |
| 01272 | Anesth, femoral artery surg | C | |
| 01274 | Anesth, femoral embolectomy | C | |
| 01402 | Anesth, knee arthroplasty | C | |
| 01404 | Anesth, amputation at knee | C | |
| 01442 | Anesth, knee artery surg | C | |
| 01444 | Anesth, knee artery repair | C | |
| 01486 | Anesth, ankle replacement | C | |
| 01502 | Anesth, lwr leg embolectomy | C | |
| 01632 | Anesth, surgery of shoulder | C | |

ADDENDUM E.—HCPCS CODES THAT ARE PAID ONLY AS INPATIENT PROCEDURES FOR CY 2008—Continued

| HCPCS code | Short descriptor | SI | CI |
