

the 48 contiguous states plus Hawaii to be 8.96 billion gallons in 2008.³

Calculation of GE_i, Amount of Gasoline Projected To Be Produced by Exempt Small Refineries and Small Refiners in Year i, in Gallons⁴

In the final rulemaking, we stated that we would estimate the combined small refinery and small refiner gasoline

volume using a constant percentage of national consumption. Using information from gasoline batch reports submitted to EPA, EIA data and input from the California Air Resources Board regarding California small refiners, we estimated this percentage to be 13.5%.⁵ Multiplying the projected nationwide consumption of gasoline in 2008 (144.80 billion gallons) by 13.5% results in a

total projected production of 19.55 billion gallons of gasoline from small refiners and small refineries in 2008.

Calculation of RFStd_i, Renewable Fuel Standard in Year i, in Percent

Substituting all of the terms calculated above into the equation for RFStd_i results in the following RFS for 2008,

$$\text{RFStd}_i = 100 \times \frac{5.4}{144.50 - 8.96 - 19.55} = 4.66\%$$

Therefore, the RFS for 2008 is 4.66%. This is the standard referenced in 40 CFR 80.1105(b) through (d) and which obligated parties apply to determine their renewable volume obligation under 40 CFR 80.1107.
