SUPPLEMENTARY INFORMATION:

Background

The Nuclear Regulatory Commission is amending the regulations in 10 CFR parts 1, 2, 30, 31, 32, 34, 35, 40, 50, 51, 52, 55, 61, 62, 73, 75, 100, 140, and 150 to reflect the addresses of two additional Headquarters buildings, the reorganization of the Office of Nuclear Materials Safety and Safeguards, the creation of the Office of Federal and

State Materials and Environmental Management Programs, the reorganization of the Office of Nuclear Reactor Regulation, the creation of the Office of New Reactors, and other minor changes.

Because these amendments constitute minor administrative corrections to the regulations, the notice and comment provisions of the Administrative Procedure Act do not apply pursuant to 5 U.S.C. 553(b)(B). The amendments are effective upon publication in the **Federal Register**. Good cause exists under 5 U.S.C 553(d) to dispense with the usual 30-day delay in the effective date of the final rule because the amendments are of a minor and administrative nature dealing with internal agency organization and facilities and do not require action by any person or entity regulated by the NRC, nor does the final rule change the substantive responsibilities of any person or entity regulated by the NRC.

Commencement of construction prior to this conclusion is grounds for denial of a license to possess and use source and byproduct material in the plant or facility. As used in this paragraph, the term "commencement of construction" means any clearing of land, excavation, or other substantial action that would adversely affect the environment of a site. The term does not mean site exploration, roads necessary for site exploration, borings to determine foundation conditions, or other preconstruction monitoring or testing to establish background information related to the suitability of the site or the protection of environmental values.

The report shall be submitted within 30 days after the end of each calendar quarter in which such a product or device is transferred to the generally licensed person. If no transfers have been made to persons generally licensed under § 40.25 during the reporting period, the report shall so indicate;

* * * * *

(f) Licensees required to submit emergency plans by § 40.31(i) shall follow the emergency plan approved by the Commission. annual radiation doses to the public resulting from effluent releases. If quantities of radioactive materials released during the reporting period are significantly above the licensee's design objectives previously reviewed as part of the licensing action, the report shall cover this specifically. On the basis of such reports and any additional information the Commission may obtain from the licensee or others, the Commission may from time to time require the licensee to take such action as the Commission deems appropriate.

■ 56. In Appendix G, Section I, the note paragraph is revised, in Section III, paragraphs A and B are revised, and in Section IV, paragraphs A.1.a. and A.1.c. are revised to read as follows:

Appendix G to Part 50—Fracture Toughness Requirements

* * * * *

I. Introduction and Scope

* * * * *

Note: The adequacy of the fracture toughness of other ferritic materials not covered in this section must be demonstrated to the Director, Office of Nuclear Reactor Regulation or the Director, Office of New Reactors, as appropriate, on an individual case basis.

* * * * *

III. Fracture Toughness Tests

A. To demonstrate compliance with the fracture toughness requirements of section IV of this appendix, ferritic materials must be tested in accordance with the ASME Code and, for the beltline materials, the test requirements of appendix H of this part. For a reactor vessel that was constructed to an ASME code earlier than the Summer 1972 Addenda of the 1971 Edition (under § 50.55a), the fracture toughness data and data analysis must be supplemented in a manner approved by the Director, Office of Nuclear Reactor Regulation or Director,

Office of New Reactors, as appropriate, to demonstrate equivalence with the fracture toughness requirements of this appendix.

B. Test methods for supplemental fracture toughness tests described in paragraph IV.A.1.b of this appendix must be submitted to and approved by the Director, Office of Nuclear Reactor Regulation or Director, Office of New Reactors, as appropriate, prior to testing.

* * * * *

IV. Fracture Toughness Requirements

A. * * *

1. * * *

a. Reactor vessel beltline materials must have Charpy upper-shelf energy¹ in the transverse direction for base material and along the weld for weld material according to the ASME Code, of no less than 75 ft-lb (102 J) initially and must maintain Charpy upper-shelf energy throughout the life of the vessel of no less than 50 ft-lb (68 J), unless it is demonstrated in a manner approved by the Director, Office of Nuclear Reactor Regulation or Director, Office of New Reactors, as appropriate, that lower values of Charpy upper-shelf energy will provide margins of safety against fracture equivalent to those required by Appendix G of Section XI of the ASME Code. This analysis must use the latest edition and addenda of the ASME Code incorporated by reference into § 50.55a(b)(2) at the time the analysis is submitted.

* * * * *

c. The analysis for satisfying the requirements of section IV.A.1 of this appendix must be submitted, as specified in § 50.4, for review and approval on an individual case basis at least three years prior to the date when the predicted Charpy upper-shelf energy will no longer satisfy the requirements of section IV.A.1 of this appendix, or on a schedule approved by the Director, Office of Nuclear Reactor Regulation or Director, Office of New Reactors, as appropriate.

■ 57. In Appendix H, Section III, the introductory text of paragraph C.1 and paragraph C.3 are revised to read as follows:

Appendix H to Part 50—Reactor Vessel Material Surveillance Program Requirements

* * * * *

III. Surveillance Program Criteria

* * * * *

C. * * *

1. In an integrated surveillance program, the representative materials chosen for surveillance for a reactor are irradiated in one or more other reactors that have similar design and operating features. Integrated surveillance programs must be approved by the Director, Office of Nuclear Reactor Regulation or the Director, Office of New Reactors, as appropriate, on a case-by-case

¹ Defined in ASTM E 185-79 and -82 which are incorporated by reference in appendix H to part 50.

basis. Criteria for approval include the following:

* * * * *

3. After (the effective date of this section), no reduction in the amount of testing is permitted unless previously authorized by the Director, Office of Nuclear Reactor Regulation or the Director, Office of New Reactors, as appropriate.

* * * * *

■ 58. In Appendix J, Section V, paragraph B.2 is revised to read as follows:

Appendix J to Part 50—Primary Reactor Containment Leakage Testing for Water-Cooled Reactors

* * * * *

V. Application

* * * * *

B. * * *

2. A licensee or applicant for an operating license under this part or a combined license under part 52 of this chapter may adopt Option B, or parts thereof, as specified in Section V.A of this appendix, by submitting its implementation plan and request for revision to technical specifications (see paragraph B.3 of this section) to the Director, Office of Nuclear Reactor Regulation or Director, Office of New Reactors, as appropriate.

BILLING CODE 7590-01-P

FEDERAL RESERVE SYSTEM

12 CFR Part 201

[Regulation A]

Extensions of Credit by Federal Reserve Banks

AGENCY: Board of Governors of the Federal Reserve System.

ACTION: Final rule.

SUMMARY: The Board of Governors of the Federal Reserve System (Board) has adopted final amendments to its Regulation A to reflect the Board's approval of a decrease in the primary credit rate at each Federal Reserve Bank. The secondary credit rate at each Reserve Bank automatically decreased by formula as a result of the Board's primary credit rate action.

DATES: The amendments to part 201 (Regulation A) are effective January 31, 2008. The rate changes for primary and secondary credit were effective on the dates specified in 12 CFR 201.51, as amended.

FOR FURTHER INFORMATION CONTACT: Jennifer J. Johnson, Secretary of the Board (202/452-3259); for users of Telecommunication Devices for the Deaf (TDD) only, contact 202/263-4869.

SUPPLEMENTARY INFORMATION: The Federal Reserve Banks make primary and secondary credit available to depository institutions as a backup source of funding on a short-term basis, usually overnight. The primary and secondary credit rates are the interest rates that the twelve Federal Reserve Banks charge for extensions of credit under these programs. In accordance with the Federal Reserve Act, the primary and secondary credit rates are established by the boards of directors of the Federal Reserve Banks, subject to the review and determination of the Board.

The Board approved requests by the Reserve Banks to decrease by 75 basis points the primary credit rate in effect at each of the twelve Federal Reserve Banks, thereby decreasing from 4.75 percent to 4.00 percent the rate that each Reserve Bank charges for extensions of primary credit. As a result of the Board's action on the primary credit rate, the rate that each Reserve Bank charges for extensions of secondary credit automatically decreased from 5.25 percent to 4.50 percent under the secondary credit rate formula. The final amendments to Regulation A reflect these rate changes.

The 75-basis-point decrease in the primary credit rate was associated with a similar decrease in the target for the federal funds rate (from 4.25 percent to 3.50 percent) approved by the Federal Open Market Committee (Committee) and announced at the same time. A press release announcing these actions indicated that:

The Committee took this action in view of a weakening of the economic outlook and increasing downside risks to growth. While strains in short-term funding markets have
