

parties to provide risk management proposals or otherwise comment on risk management for sulfometuron methyl. Risks of concern associated with the use of sulfometuron methyl are: indirect effects on freshwater fish and invertebrates, estuarine/marine fish and invertebrates, and acute and chronic exposure to aquatic and terrestrial plants. In targeting these risks of concern, the Agency solicits information on effective and practical risk reduction measures.

EPA seeks to achieve environmental justice, the fair treatment and meaningful involvement of all people, regardless of race, color, national origin, or income, in the development, implementation, and enforcement of environmental laws, regulations, and policies. To help address potential environmental justice issues, the Agency seeks information on any groups or segments of the population who, as a result of their location, cultural practices, or other factors, may have atypical, unusually high exposure to sulfometuron methyl, compared to the general population.

EPA is applying the principles of public participation to all pesticides undergoing reregistration. The Agency's Pesticide Tolerance Reassessment and Reregistration; Public Participation Process, published in the **Federal Register** on May 14, 2004 (69 FR 26819) (FRL-7357-9), explains that in conducting these programs, the Agency is tailoring its public participation process to be commensurate with the level of risk, extent of use, complexity of the issues, and degree of public concern associated with each pesticide. For sulfometuron methyl, a modified, 4-Phase process with one comment period seems appropriate in view of its limited risk and few complex issues. However, if as a result of comments received during this comment period EPA finds that additional issues warranting further discussion are raised, the Agency may lengthen the process and include a second comment period, as needed.

All comments should be submitted using the methods in **ADDRESSES**, and must be received by EPA on or before the closing date. Comments will become part of the Agency Docket for sulfometuron methyl. Comments received after the close of the comment period will be marked "late." EPA is not required to consider these late comments.

B. What is the Agency's Authority for Taking this Action?

Section 4(g)(2) of FIFRA, as amended, directs that, after submission of all data concerning a pesticide active ingredient,

"the Administrator shall determine whether pesticides containing such active ingredient are eligible for reregistration," before calling in product-specific data on individual end-use products and either reregistering products or taking other "appropriate regulatory action."

II. Background

A. What Action is the Agency Taking?

EPA is releasing for public comment its human health and environmental fate and effects risk assessments and related documents for tetramethrin, a synthetic pyrethroid pesticide, and soliciting public comment on risk management ideas or proposals. EPA developed the risk assessments and risk characterization for tetramethrin through a modified version of its public process for making pesticide reregistration eligibility and tolerance reassessment decisions. Through these programs, EPA is ensuring that pesticides meet current standards under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Federal Food, Drug, and Cosmetic Act (FFDCA), as amended by the Food Quality Protection Act of 1996 (FQPA).

Tetramethrin is a broad-spectrum, first-generation synthetic pyrethroid insecticide. It is a rapid knockdown agent against flying and crawling insects. It is frequently combined with a killing agent since knockdown may be transient. It may be co-formulated with synergists and other active ingredients to provide residual activity against insects not exposed initially. Tetramethrin is used for both indoor and outdoor residential, institutional, industrial, and horticultural use sites. It is also registered for use on pets and clothes; and there are no registered food uses. Tetramethrin is applied by spray from an aerosol can, injected into cracks

and crevices or ant mounds through an injection tube attached to the aerosol can, by hand to pets, or dispersed into the air using a fogger can.

EPA is providing an opportunity, through this notice, for interested parties to provide comments and input on the Agency's risk assessments for tetramethrin. Such comments and input could address, for example, the availability of additional data to further refine the risk assessments, such as data on the dissipation of tetramethrin on carpets and vinyl flooring after residential indoor application, detailed data on tetramethrin's residential use patterns, or could address the Agency's risk assessment methodologies and assumptions as applied to this specific pesticide.

Through this notice, EPA also is providing an opportunity for interested parties to provide risk management proposals or otherwise comment on risk management for tetramethrin. Risks of concern associated with the use of tetramethrin include the following: post-application inhalation exposure from total release foggers and post-application incidental oral exposure from aerosol can and ready-to-use sprays. In targeting these risks of concern, the Agency solicits information on effective and practical risk reduction measures.

EPA seeks to achieve environmental justice, the fair treatment and meaningful involvement of all people, regardless of race, color, national origin, or income, in the development, implementation, and enforcement of environmental laws, regulations, and policies. To help address potential environmental justice issues, the Agency seeks information on any groups or segments of the population who, as a result of their location, cultural practices, or other factors, may have atypical, unusually high exposure to tetramethrin, compared to the general population.

For tetramethrin, a modified, 4-Phase process with one comment period and ample opportunity for public

consultation seems appropriate in view of its limited use and few complex issues. However, if as a result of comments received during this comment period EPA finds that additional issues warranting further discussion are raised, the Agency may lengthen the process and include a second comment period, as needed.

All comments should be submitted using the methods in **ADDRESSES**, and must be received by EPA on or before the closing date. Comments will become part of the Agency Docket for tetramethrin. Comments received after the close of the comment period will be marked "late." EPA is not required to consider these late comments.
