

The NRC staff will perform a detailed technical review of the design certification application. Docketing of the design certification application does not preclude the NRC from requesting additional information from the applicant as the review proceeds, nor does it predict whether the Commission will grant or deny the application. A notice relating to the rulemaking pursuant to 10 CFR 52.51 for design certification, including provisions for participation of the public and other parties, will be published in the future.

The US-APWR design is an approximately 1,700 megawatts electric, four loop, advanced pressurized water reactor (APWR). MHI developed the US-APWR based on technologies for a 1,538 megawatts electric APWR planned for use in Japan. The US-APWR is based on the latest technologies to improve plant efficiency, reduce plant building volume, and provide a 24-month fuel cycle. The US-APWR application includes the entire power generation complex, except those elements and features considered site-specific.
