IV. What is the Agency's Authority for Taking this Action?

Section 6(f)(1) of FIFRA provides that a registrant of a pesticide product may at any time request that any of its pesticide registrations be canceled or amended to terminate one or more uses. FIFRA further provides that, before acting on the request, EPA must publish a notice of receipt of any such request in the **Federal Register**. Thereafter, following the public comment period, the Administrator may approve such a request.

V. Procedures for Withdrawal of Request and Considerations for Reregistration of Disulfoton

Registrants who choose to withdraw a request for cancellation must submit such withdrawal in writing to the person listed under **FOR FURTHER INFORMATION CONTACT**, postmarked before June 20, 2008. This written withdrawal of the request for cancellation will apply only to the applicable FIFRA section 6(f)(1) request listed in this notice. If the product(s) have been subject to a previous cancellation action, the effective date of cancellation and all other provisions of any earlier cancellation action are controlling.

VI. Provisions for Disposition of Existing Stocks

In response to this request for termination of certain uses, the Agency proposes to issue an order which would include the following provisions for the treatment of any existing stocks of the products identified or referenced in Table 1. If the request for voluntary termination of certain uses is granted as discussed in unit 3, the Agency intends to issue a cancellation order that would allow the registrant to sell and distribute such existing stocks for six months from the date of the cancellation order and allow persons other than the registrant to continue to sell and/or use existing stocks of products with previously approved labeling that includes the discontinued uses, until such stocks are exhausted, provided that such use is consistent with the terms of the previously approved labeling on, or that accompanied, the associated products. Generally, orders effecting requested cancellations permit a registrant to sell or distribute existing stocks for one year after the date the cancellation request was received. In this case however, the Agency has determined that six months will allow sufficient time for the registrant to sell or distribute existing stocks. The decision to phase out disulfoton usage on wheat, barley, and potatoes by 2005 was announced in the 2002 RED. The technical registrant initially announced their voluntary cancellation of Di-Syston 15G use on broccoli in a letter dated September 30, 2004. Given the amount of time that has elapsed since these events, the Agency has determined it is unnecessary to provide the registrant one year to sell or distribute existing stocks. Consequently, the cancellation order will permit the registrant to sell or distribute existing stocks for six months after the date the cancellation order is issued. This policy is in accordance with the Agency's

statement of policy as prescribed in the **Federal Register** of June 26, 1991 (56 FR 29362) (FRL-3846-4). Exceptions to this general rule will also be made if a product poses a risk concern, or is in noncompliance with reregistration requirements, or is subject to a data call-in. In all cases, product-specific disposition dates will be given in the cancellation orders. The Agency intends to publish the final cancellation order in the **Federal Register**.

Existing stocks are those stocks of registered pesticide products which are currently in the United States and which have been packaged, labeled, and released for shipment prior to the effective date of the cancellation action. Unless the provisions of an earlier order apply, existing stocks already in the hands of dealers or users can be distributed, sold, or used legally until they are exhausted, provided that such further sale and use comply with the EPA-approved label and labeling of the affected product. Exception to these general rules will be made in specific cases when more stringent restrictions on sale, distribution, or use of the products or their ingredients have already been imposed, as in a Special Review action, or where the Agency has identified significant potential risk concerns associated with a particular chemical.
