

because so many individuals who are eligible to serve as peer reviewers have conflicts of interest. The Standing Panel requirements under IDEA also have placed additional constraints on the availability of reviewers. Therefore, the Department has determined that, for some discretionary grant competitions, applications may be separated into two or more groups and ranked and selected for funding within the specific groups. This procedure will make it easier for the Department to find peer reviewers by ensuring that greater numbers of individuals who are eligible to serve as reviewers for any particular group of applicants will not have conflicts of interest. It also will increase the quality, independence, and fairness of the review process while permitting panel members to review applications under discretionary grant competitions for which they also have submitted applications. However, if the Department decides to select an equal number of applications in each group for funding, this may result in different cut-off points for fundable applications in each group.

**Abstract:** Section 1453(a)(3) of the Safe Drinking Water Act (SDWA) required States to submit a Source Water Assessment Program within 18 months after the U.S. Environmental Protection Agency (EPA) published its State Source Water Assessment and Protection Programs Guidance: Final Guidance. Upon EPA approval of their programs, States conducted source water assessments of their public water systems. State assessments were required to be completed three and a half years after approval of a state's program; the assessment program is therefore complete relative to the SDWA requirements. The burden and cost associated with all of the assessment was accounted for in three previous information collection requests (EPA ICR Nos. 1816.01, 1816.02, and 1816.03).

The 2006-2011 EPA Strategic Plan incorporates a source water contamination prevention measure to describe the voluntary source water protection (SWP) actions taken at the local or regional level based on the results of completed source water assessments. EPA's strategic target for SWP sets a goal of minimized risk to public health in 50 percent of community water systems (CWSs) and the 62 percent of the U.S. population served by those CWSs by 2011. Achieving minimized risk to public health focuses on developing and substantially implementing SWP strategies to address potential contamination risks within each CWS source water area.

EPA is collecting, on a voluntary basis, data from the States on their progress toward substantial implementation of prevention strategies for all CWS SWAs. While Section 1453(a)(3) of the SDWA does not authorize source water protection, States are encouraged to use the data collected in the source water assessments to develop protection plans for source water areas. Drinking Water State Revolving Fund monies authorized in Section 1452(g)(2)(B) may be used for activities to support efforts in source water protection. The
