NUCLEAR REGULATORY COMMISSION

[Docket No. 50-331]

FPL Energy Duane Arnold, LLC; Notice of Withdrawal of Application for Amendment to Facility Operating License No. DPR-49

The U.S. Nuclear Regulatory Commission (NRC, the Commission) has granted the request of FPL Energy Duane Arnold, LLC (the licensee) to withdraw its November 14, 2007, application for proposed amendment (Agencywide Documents Access and Management System (ADAMS) Accession No. ML073320232) to Facility Operating License No. DPR-49 for the Duane Arnold Energy Center, located in Linn County.

The proposed amendment would have revised Technical Specification (TS) 5.5.12, "Primary Containment Leakage Rate Testing Program," to allow use of the requirements of American Society of Mechanical Engineers (ASME) Boiler and Pressure Vessel Code (the Code), Section XI, Subsection IWE for visual examination of the steel containment. This license amendment request was consistent with NRC-approved Technical Specification Task Force (TSTF) Traveler number TSTF-343, Revision 1, "Containment Structural Integrity."

The Commission had previously issued a Notice of Consideration of Issuance of Amendment published in the **Federal Register** on January 28, 2008 (73 FR 5220). However, by letter dated April 23, 2008, ADAMS Accession No. ML081270233, the licensee withdrew the proposed change.

For further details with respect to this action, see the application for amendment dated November 14, 2007, and the licensee's letter dated April 23, 2008, which withdrew the application for license amendment. Documents may be examined, and/or copied for a fee, at the NRC's Public Document Room (PDR), located at One White Flint North, Public File Area O1 F21, 11555 Rockville Pike (first floor), Rockville, Maryland. Publicly available records will be accessible electronically from the Agencywide Documents Access and Management Systems (ADAMS) Public Electronic Reading Room on the internet at the NRC Web site, <http://www.nrc.gov/reading-rm.html>. Persons who do not have access to ADAMS or who encounter problems in accessing the documents located in ADAMS should contact the NRC PDR Reference staff by telephone at 1-800-397-4209, or 301-415-4737 or by e-mail to pdr@nrc.gov.

Dated at Rockville, Maryland, this 30th day of May 2008.

NUCLEAR REGULATORY COMMISSION

Final Regulatory Guide: Issuance, Availability

AGENCY: U.S. Nuclear Regulatory Commission.

ACTION: Issuance, Availability of Regulatory Guide 1.210.

FOR FURTHER INFORMATION CONTACT:

Satish Aggarwal, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001, telephone (301) 415-6005 or e-mail to SKA@nrc.gov.

SUPPLEMENTARY INFORMATION: The U.S. Nuclear Regulatory Commission (NRC) is issuing the new Regulatory Guide 1.210, "Qualification of Safety-Related Battery Chargers and Inverters for Nuclear Power Plants." The NRC's regulatory guides describe and make available to the public information such as methods that are acceptable to the NRC staff for implementing specific parts of the agency's regulations, techniques that the staff uses in evaluating specific problems or postulated accidents, and data that the staff needs in its review of applications for permits and licenses.

The regulations in Title 10, Part 50, "Domestic Licensing of Production and Utilization Facilities," of the Code of Federal Regulations (10 CFR Part 50) require that structures, systems, and components that are important to safety in a nuclear power plant must be designed to accommodate the effects of environmental conditions (i.e., remain functional under postulated design-basis events (DBEs)). Toward that end, the general requirements appear in General Design Criterion (GDC) 1, "Quality Standards and Records," GDC 2, "Design Bases for Protection Against Natural Phenomena," GDC 4, "Environmental and Dynamic Effects Design Bases," and GDC 23, "Protection System Failure Modes," of Appendix A, "General Design Criteria for Nuclear Power Plants," to 10 CFR Part 50. Augmenting those general requirements, 10 CFR 50.49, "Environmental Qualification of Electric Equipment Important to Safety for Nuclear Power Plants," contains the specific

requirements pertaining to qualification of certain electrical equipment important to safety. In addition, Criterion III, "Design Control," of Appendix B, "Quality Assurance Criteria for Nuclear Power Plants," to 10 CFR Part 50 requires that where a test program is used to verify the adequacy of a specific design feature, it should include suitable qualification testing of a prototype unit under the most severe DBE.

This regulatory guide describes a method that the NRC staff considers acceptable for complying with the regulations for qualification of safety-related battery chargers and inverters for nuclear power plants.

In July 2007, the NRC published a draft of this guide as DG-1148. The public comment period closed on October 2, 2007. The staff's responses to the public comments are located in the NRC's Agencywide Documents Access and Management System (ADAMS) under Accession No. ML080640181.

Electronic copies of Regulatory Guide 1.210 are available through the NRC's public Web site under "Regulatory Guides" at <http://www.nrc.gov/reading-rm/doc-collections/>.

In addition, regulatory guides are available for inspection at the NRC's Public Document Room (PDR), which is located at 11555 Rockville Pike, Rockville, MD. The PDR mailing address is USNRC PDR, Washington, DC 20555-0001. The PDR can also be reached by telephone at (301) 415-4737 or (800) 397-4209, by fax at (301) 415-3548, and by e-mail to PDR@nrc.gov.

Regulatory guides are not copyrighted, and NRC approval is not required to reproduce them.
