

shared cultural practices. This added associated fields in Jefferson County, ID, as well as fields in Bonneville and Bingham Counties, ID.

On November 28, 2007, surveys confirmed the detection of PCN in one new field. It was not necessary to add that field to the quarantined area, as it had already been listed as an associated field. However, the finding of an infestation in that field led to new fields being designated as associated fields. These fields were in Bonneville and Bingham Counties.

On January 9, 2008, the quarantined area was further updated to remove four fields from the quarantined area. Although these fields had appeared to be associated fields, further investigation demonstrated that these fields were not associated with an infested field. The fields removed from quarantine were in Bonneville County.

On March 21, 2008, the quarantined area was updated to remove 24 fields from the quarantined area. These fields had been associated fields, and were found to be free of PCN according to a survey protocol approved by the Administrator as sufficient to support removal from quarantine, under paragraph (d)(2) of § 301.86-3. The fields removed from quarantine were in Bonneville and Bingham Counties.

The current map of the quarantined area can be viewed on the PPQ Web site at http://www.aphis.usda.gov/plant_health/plant_pest_info/potato/pcn.shtml.
