Background

The Florida scrub-jay is found exclusively in peninsular Florida and is restricted to xeric upland communities (predominately in oak-dominated scrub with open canopies) of the interior and Atlantic coast sand ridges. Increasing urban and agricultural development has resulted in habitat loss and fragmentation, which have adversely affected the distribution and numbers of scrub-jays. Remaining habitat is largely degraded due to the exclusion of fire, which is needed to maintain xeric uplands in conditions suitable for scrub-jays. The total estimated population is between 7,000 and 11,000 individuals.

Applicant's Proposal

The applicant is requesting take of approximately 0.38 ac of occupied scrub-jay habitat incidental to the projects. Both proposed projects are located in Section 09, Township 18, Range 30, in Orange City, Florida. The proposed projects currently include residential construction, including house pad, infrastructure, and landscaping. The applicant proposes to mitigate for the take of the Florida scrub-jay at a ratio of 2:1 based on Service Mitigation Guidelines. The applicant proposes to mitigate for the loss of 0.38 ac of occupied scrub-jay habitat by contributing a total of \$20,589.92 to the Florida Scrub-jay Conservation Fund administered by The Nature Conservancy. Funds in this account are earmarked for use in the conservation and recovery of scrub-jays and may include habitat acquisition, restoration, and/or management. As minimization for impacts to the species, clearing activities during project construction will occur outside the scrub-jay nesting season (March 1–June 30).

We have determined that the applicant's proposal, including the proposed mitigation and minimization measures, would have minor or negligible effects on the species covered in the HCPs. Therefore, the ITPs are "low-effect" projects and qualify for
