

Rural Business-Cooperative Service

Title: Renewal Energy and Energy Efficiency Improvements Program.

OMB Control Number: 0570-0050.

Summary of Collection: This program is authorized under the Farm Security and Rural Investment Act of 2002 (Act) that established the Renewable Energy Systems and Energy Efficiency Improvements Program under title IX, Section 9006. The Act requires the Secretary of Agriculture to create a program to make direct loans, loan guarantees, and grants to farmers, ranchers, and rural small businesses to purchase renewable energy systems and make energy efficiency improvements. The program is designed to help farmers, ranchers, and rural small businesses reduce energy cost and consumption, develop new income streams, and help meet the nation's critical energy needs. The Act also mandates the maximum percentage the Rural Business-Cooperative Service (RBS) will provide in funding for these types of projects. Applicants wishing to apply for the grant or guaranteed loans will have to submit applications along with specified documents to the State Rural Energy Coordinator.

Need and Use of the Information: RBS will use the collected information to determine applicant eligibility, to determine project eligibility and feasibility, ensure compliance with applicable regulations, and to ensure that grantees/borrowers operate on a sound basis and use funds for authorized purposes. Without this collection of information RBS would be unable to meet the requirements of the Act and effectively administer the program.

This notice reflects an increase in figures to encompass the projected increase in applicants due to additional funding and public interest in the program that was not accounted for in the **Federal Register** notice published on January 9, 2008.

Description of Respondents: Farmers, ranchers, and business or other for-profit.

Number of Respondents: 1,507.

Frequency of Responses: Annually.

Total Burden Hours: 77,412.

AGENCIES: Bureau of Land Management, Interior; and U.S. Forest Service, Agriculture.

ACTION: Notice of Availability (NOA) of the Draft Programmatic Environmental Impact Statement for Leasing of Geothermal Resources in 11 Western States and Alaska and Notice of Public Hearings.

SUMMARY: In accordance with Section 202 of the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321 *et seq.*), the Council on Environmental Quality's regulations implementing the NEPA (40 CFR 1500-1508), and applicable agency guidance, a Draft Programmatic Environmental Impact Statement (PEIS) has been prepared on the leasing of geothermal resources in 11 Western States and Alaska. The Department of the Interior, the Bureau of Land Management (BLM) and the Department of Agriculture, the Forest Service (FS) are co-lead agencies for the PEIS, and the Department of Energy (DOE) is a cooperating Federal agency.

In accordance with the Energy Policy Act of 2005 (Pub. The Notice of Intent to prepare the PEIS was published on June 13, 2007, in the **Federal Register** (72 FR 32679). In accordance with the Energy Policy Act of 2005, the BLM and the FS propose to facilitate geothermal leasing on lands administered by the BLM (termed “public lands”) and by the FS (National Forest System (NFS) lands) that have geothermal potential in the 11 western states and Alaska. Under the proposal, the BLM and the FS would do the following: (1) Identify public and NFS lands with geothermal potential for which geothermal leases may be issued, statutorily open lands, and for which issuance of geothermal leases is barred by operation of law, legally closed lands; (2) identify public lands that are administratively closed or open, and under what conditions; (3) develop a comprehensive list of stipulations, best management practices, and procedures to serve as consistent guidance for future geothermal leasing and development on public and NFS lands; (4) amend the BLM Resource Management Plans (RMPs) to adopt the resource allocations and procedures; and (5) issue or deny geothermal lease applications pending as of January 1, 2005.

The need for the action is to (1) Issue decisions on pending lease applications

in accordance with the Energy Policy Act of 2005; (2) address other provisions of the Energy Policy Act of 2005, respond to other policy directives calling for clean and renewable energy (such as state renewable portfolio standards), and meet the increasing energy demands of the nation; and (3) facilitate geothermal leasing decisions on other existing and future lease applications and nominations on the Federal mineral estate. The purpose of the action is to (1) Complete the processing of active pending geothermal lease applications; (2) amend BLM land use plans to allocate lands with geothermal potential as being closed or open with minor to major constraints to leasing; and (3) provide suitable information to the FS to facilitate its subsequent consent decisions for BLM leasing on NFS lands.

Over 530 million acres of the western United States and Alaska have been identified as potentially containing geothermal resources suitable for commercial electrical generation and other direct uses, such as heating. Much of the resource base is held in the Federal mineral estate, for which the BLM has the delegated authority for processing and issuing geothermal leases. Some units or portions of the areas identified as having geothermal resource potential will not be developed because they are unavailable for leasing, either by statute, regulation or other authority. These designations are described at 43 CFR 3201.11, and include, but are not limited to: lands where the Secretary has determined that issuing a lease would cause unnecessary or undue degradation to public lands and resources; lands contained within a unit of the National Park System, for example, the geothermal features in and around Yellowstone National Park; wilderness areas; wilderness study areas; fish hatcheries; wildlife management areas; Indian trust lands; and other areas referred to in the above regulation.

Under the Proposed Action, the BLM and the FS would also apply discretionary closures to (1) Areas of Critical Environmental Concern (ACEC) where the BLM determines that geothermal leasing and development would be incompatible with the purposes for which the ACEC was designated, or those whose management plans expressly preclude new leasing; (2) National Conservation Areas, except the California Desert Conservation Area;

(3) other lands in the BLM’s National Landscape Conservation System, such as historic and scenic trails; and (4) military reservations where geothermal development would conflict with the military mission.

Approximately 142 million acres of public (BLM) lands and 106 million acres of NFS lands have geothermal potential. Based on the proposed closures, the BLM and the FS are proposing to allocate approximately 117 million acres of public lands and 75 million acres of NFS lands to geothermal leasing subject to existing laws, regulations, formal orders, stipulations attached to the lease form, and terms and conditions of the standard lease form. To protect special resource values, the BLM and the FS have developed a comprehensive list of stipulations, conditions of approval, and best management practices (BMPs).

In addition, a reasonably foreseeable development scenario (RFD) was prepared to predict future geothermal development trends. The RFD estimates a potential for 5,500 megawatts (MW) of new electrical generation capacity by 2015 through 110 new geothermal power plants, and an additional 6,600 MW from an additional 132 power plants by 2025. The RFD also recognizes the great potential for direct uses, including up to 270 communities being able to develop geothermal resources for heating buildings to offset the use of conventional energy sources.

The BLM and the FS administrative units that have geothermal resources within their boundaries and are included in the planning area for the PEIS are provided in Table 1. In order for geothermal resource leasing and development to take place on the public lands that the BLM manages, such activities must be provided for in the land use plan for the affected administrative unit. Therefore, land use plans for the affected BLM administrative units may be amended by this PEIS to address geothermal leasing. Adoption of the appropriate allocations, development scenarios, stipulations, and BMPs for specific administrative units will be done through the plan maintenance process; thereby allowing future leasing decisions to be made based on the amended plans. The FS will evaluate their land use plans and amend them as needed through a separate environmental review process.

In addition to the Proposed Action, the PEIS evaluates two other alternatives: The No Action Alternative and an alternative termed Leasing Near Transmission Lines. The No Action Alternative would allow the processing of pending geothermal lease applications; however, no land use plans would be amended. Therefore, lease applications would be evaluated on a case-by-case basis and would require additional environmental review and possible land use plan amendments.

The Leasing Near Transmission Lines Alternative was developed based on input from scoping. Under this alternative the scope of lands considered for leasing for commercial electrical generation would be limited to those lands that are near transmission lines.

This alternative also considers a larger buffer around Yellowstone National Park. While this alternative minimizes the potential footprint of tie-in transmission lines from power plants to distribution lines, it would limit the potential for geothermal energy generation.

In addition to the programmatic analysis, the PEIS provides site-specific environmental analysis for seven lease applications in Alaska, California, Nevada, Oregon, and Washington that were pending as of January 1, 2005. The alternatives evaluated for this analysis are issuing the lease or denying the lease (no action conditions).
