ENVIRONMENTAL PROTECTION AGENCY

[FRL-8685-6; Docket ID No. EPA-HQ-ORD-2008-0461]

Draft Toxicological Review of Tetrachloroethylene (Perchloroethylene): In Support of Summary Information on the Integrated Risk Information System (IRIS)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of Public Comment Period.

SUMMARY: EPA is announcing a 90-day public comment period for the draft document entitled, "Toxicological Review of Tetrachloroethylene (Perchloroethylene): In Support of Summary Information on the Integrated Risk Information System (IRIS)" (EPA/635/R-08/011A). The document was prepared by the National Center for Environmental Assessment (NCEA) within EPA's Office of Research and Development. The draft tetrachloroethylene health assessment addresses both potential cancer and non-cancer human health effects that may result from chronic exposure to tetrachloroethylene. Tetrachloroethylene, commonly referred to as "perc", is a solvent widely used in the dry cleaning of clothes and as a metal degreaser.

EPA intends to consider comments and recommendations from the public and the expert panel meeting, which will be announced at a later date, when EPA finalizes the draft document. The public comment period will provide opportunities for all interested parties to comment on the document. EPA intends to forward public comments, submitted

in accordance with this notice, to the external peer-review panel prior to the peer review meeting for their consideration.

EPA is releasing this draft document solely for the purpose of pre-dissemination peer review under applicable information quality guidelines. This document has not been formally disseminated by EPA. It does not represent and should not be construed to represent any Agency policy or determination. EPA will consider any public comments submitted in accordance with this notice when revising the document.

The draft document is available via the Internet on NCEA's homepage under the Recent Additions and the Data and Publications menus at <http://www.epa.gov/ncea>.

DATES: The 90-day public comment period begins June 26, 2008, and ends September 24, 2008. Technical comments should be in writing and must be received by EPA by September 24, 2008. EPA intends to submit comments from the public received by this date for consideration by the external peer review panel.

The draft tetrachloroethylene assessment will be independently peer reviewed by an expert panel convened by The National Academies' Board on Environmental Studies and Toxicology (BEST). Information on the first meeting of the BEST tetrachloroethylene panel, expected to be held in late fall 2008, will be posted on The National Academies' Web site at <http://www8.nationalacademies.org/cp/projectview.aspx?key=48697>. Note that due to the need to provide the public comments to the peer review panel one month prior to their first meeting, an extension of the public comment beyond the 90 days provided will not be possible. EPA has lengthened the comment period for tetrachloroethylene beyond the usual 60 days allotted for IRIS assessments because of the expected high interest in this draft assessment.

ADDRESSES: The draft "Toxicological Review of Tetrachloroethylene (Perchloroethylene): In Support of Summary Information on the Integrated Risk Information System (IRIS)" is available primarily via the Internet on NCEA's home page under the Recent Additions and the Data and Publications menus at <http://www.epa.gov/ncea>. A limited number of paper copies are available by contacting the Information Management Team, NCEA; telephone: 703-347-8561; facsimile: 703-347-8691. If you are requesting a paper copy, please provide your name, your mailing

address, and the document title, "Toxicological Review of Tetrachloroethylene (Perchloroethylene): In Support of Summary Information on the Integrated Risk Information System (IRIS)."

SUPPLEMENTARY INFORMATION:

I. Summary Information About the Integrated Risk Information System (IRIS)

IRIS is a database that contains potential adverse human health effects information that may result from chronic (or lifetime) exposure to specific chemical substances found in the environment. The database (available on the Internet at <http://www.epa.gov/iris>) contains qualitative and quantitative health effects information for more than 540 chemical substances that may be used to support the first two steps (hazard identification and dose-response evaluation) of the risk assessment process. When supported by available data, the database provides oral reference doses (RfDs) and inhalation reference concentrations (RfCs) for chronic non-cancer health effects, and oral slope factors and inhalation unit risks for carcinogenic effects. Combined with exposure information, government and private entities use IRIS to help characterize the public health risks of chemical substances and thereby support risk management decisions designed to protect public health.
