k. Description of Request: Alcoa Power Generating, Inc. is requesting a temporary variance of the minimum flow release requirement under license article 33 for the Yadkin Project. Due to worsening drought conditions in the project area and the need to conserve water, Alcoa requests that it be allowed to reduce the weekly average discharge flow of 1,400 cubic feet per second (cfs) to a weekly average of 1,000 cfs, effective as soon as possible. Additionally, Alcoa requests a temporary variance from the operating guides, at the Narrows reservoir, in order to balance outflows with the High Rock reservoir. Included with Alcoa's request were concurrences received from the Drought Management Team (DMT) established as a result of the 2002 drought. On July 10, 2008, the Commission granted the licensee's requests, but reserved authority to require changes in project operation based upon comments received from this notice.
