SUPPLEMENTARY INFORMATION:**I. Abstract**

The Census Bureau plans to request an extension for the Quarterly Survey of the Finances of Public Employee Retirement Systems. The quarterly survey was initiated by the Census Bureau in 1968 at the request of both the Council of Economic Advisers and the Federal Reserve Board. It gathers data on the assets of the 100 largest state and local government public-employee retirement systems. These systems hold over \$2.9 trillion in assets, which represent approximately 90 percent of all state and local government public-employee retirement system assets.

These important data are used by the Federal Reserve Board to track the public sector portion of the flow of funds accounts. The Bureau of Economic Analysis uses the data on corporate stock holdings to estimate

dividends received by state and local government public-employee retirement systems. These estimates, in turn are used as a component in developing the national income and product accounts.

II. Method of Collection

Canvass methodology consists of a mail out/mail back questionnaire. Responses are screened manually, then put into an electronic format. No statistical methods are used to calculate the data.

Respondents may choose to report their data over our Internet site. In addition to reporting current quarter data on the Internet, respondents may report for the first time for the previous two quarters or submit revisions to their previously submitted data if needed.

In those instances when we are not able to obtain a response, estimates are made for nonrespondents based on historical data for that same system.

III. Data
