

to six missions per year, including up to five live detonations per mission of approximately 5-lb (2.3 kg) net explosive weight charges to occur in approximately 60-ft (18 m) deep water from one to three nm offshore, may result in the Level B Harassment of a few Atlantic bottlenose dolphins and Atlantic spotted dolphins; this would have a negligible impact on these affected marine mammals species and stocks. Dwarf and pygmy sperm whales and manatees are unlikely to be found in the area and, therefore, are unlikely to be affected. While behavioral modifications may be made by Atlantic bottlenose dolphins and Atlantic spotted dolphins to avoid the resultant acoustic stimuli, there is virtually no possibility of injury or mortality when the potential density of dolphins in the area and extent of mitigation and monitoring are taken into consideration. The effects of the NEODS training are expected to be limited to short-term and localized TTS-related behavioral changes. No subsistence users are located within the geographic area of this project.

No rookeries, mating grounds, areas of concentrated feeding, or other areas of special significance for marine mammals occur within or near the NEODS test sites.

Authorization

As a result of these determinations, NMFS proposes to issue an IHA to the Air Force for NEODS training operations at EAFB, Florida, provided the previously mentioned mitigation, monitoring, and reporting requirements are incorporated.
