The primary purpose of heating wood flakes in the dryers is to dry them, rather than to invoke a chemical reaction either within the dryers or downstream of the dryers. Therefore, the dryers do not qualify for the process heater exclusion.

Q1: Does NSPS subpart J apply to the proposed Hyperion Energy Center (HEC) near Elk Point, South Dakota?

A1: No. Subpart J applies to various affected facilities at petroleum refineries based on the date the affected facility commenced construction, reconstruction, or modification. Since the Hyperion Energy Center has not yet begun construction it is not subject to Subpart J. To be subject to subpart J, HEC's Claus sulfur recovery plant and fuel gas combustion devices would have had to begin construction on or before May 14, 2007, except for flares, which would have had to begin construction on or before June 24, 2008.

Q2: Do the synthetic gas and pressure swing adsorption (PSA) tail gas to be produced at the integrated gasification combined cycle power plant gasification block at the proposed Hyperion Energy Center near Elk Point, South Dakota, constitute “fuel gas” under 40 CFR part 60, subpart Ja?

A2: Yes. Because the synthetic gas and PSA tail gas will be generated at a petroleum refinery and combusted and meet the definition of “fuel gas” in 40 CFR 60.101a, therefore these are subject to NSPS subpart Ja. This definition is not restricted to gas produced by a refinery process unit, but even if it were, the gasification block will be a refinery process unit, because it is a segment of a refinery in which gasification, a specific processing operation, will be conducted.

Abstract for [Z080005]

Q: Is a proposed integrated gasification combined cycle (IGCC) power plant at the Hyperion Energy Center near Elk Point, South Dakota, subject to 40 CFR part 63, subpart CC?

A: Yes. Subpart CC applies to the IGCC system. The IGCC system is a “petroleum refining process unit” because it will be located at an establishment primarily engaged in petroleum refining and because it produces hydrogen. Additionally, the IGCC system will be located at a plant site where: (1) The plant site is a major source of hazardous air pollutants (HAPs), and (2) the IGCC system emits or has equipment containing or

contacting one or more of the HAPs listed in Table 1 of Subpart CC.

is requesting a revision due to elimination of previously approved data element. The item eliminated is request for alternative physical access which was estimated at 700 burden hours. Other reporting requirement estimates were updated since the last submission to the OMB in 2006. Therefore, the Commission is reporting a -700 hour program change and a -103,410 hourly adjustment of the total annual burden resulting in a new estimated burden of 61,490 hours (previously estimated at 165,600 total annual burden hours) since this collection was last submitted to the OMB for review and approval in 2006.

This collection identifies 16 different information collection requirements. The Commission sought to further Congress's goal of promoting innovation and investment by all participating in the telecommunications marketplace, in order to stimulate competition for all services, including advanced telecommunications services. In furtherance of this goal, the Commission imposes certain information collection requirements on incumbent local exchange carriers (LECs) in order to ensure compliance with the incumbent LEC's collocation obligations and to assist incumbent LECs in protecting network integrity.
