

provided labeling examples to show various format and content features of the labeling requirements, and suggested how OTC drug monograph labeling finalized before the new regulation was issued can be converted to the new format. The draft guidance also described how to list inactive ingredients that may or may not be contained in the OTC drug product.

The notice invited interested persons to submit comments on the draft guidance by March 14, 2005. FDA did not receive any comments in response to the notice. Therefore, we are announcing the availability of this final guidance with only editorial changes.

This guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The guidance represents the agency's current thinking on how OTC drug monograph labeling finalized before or after the new requirements can be converted to the new OTC Drug Facts labeling format. It does not create or confer any rights for or on any person and does not operate to bind FDA or the public. An alternative approach may be used if such approach satisfies the requirements of the applicable statutes and regulations.
