b. Data on the growth of *L. monocytogenes* on non-food surfaces including environmental biofilm growth.

6. Factors that influence the environmental contamination and the cross-contamination of food by *L. monocytogenes* in retail facilities, including:
   a. Data and information on the potential transfer of *L. monocytogenes* to food from the retail environment, e.g., experimental studies on the transfer to food from drains, slicers, food contact surfaces, and non-food contact surfaces; and
   b. Data and information on food handlers’ activities, e.g., observations of food handlers’ practices and monitoring of specific food safety actions in retail facilities (e.g., glove usage, hand hygiene practices, and cleaning practices).

7. Identity and effectiveness of control measures or interventions intended to reduce levels and frequency of *L. monocytogenes* in the retail environment, including:
   a. Environmental sanitation procedures including the sanitizers and protocols used, frequency of application, and efficiency; and
   b. Worker sanitation procedures including frequencies, protocols, and efficiency.

8. Any other data related to the occurrence, growth, and control of *L. monocytogenes* in retail facilities.

As the project progresses, additional data needs may be identified.

Interested persons may submit to the Division of Dockets Management (see ADDRESSES) written or electronic comments regarding this document. Submit a single copy of electronic comments or two paper copies of any mailed comments, except that individuals may submit one paper copy. Comments are to be identified with the docket number found in brackets in the heading of this document. Received comments may be seen in the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

Please note that on January 15, 2008, the FDA Division of Dockets Management Web site transitioned to the Federal Dockets Management System (FDMS). FDMS is a Government-wide, electronic docket management system. Electronic comments or submissions will be accepted by FDA only through FDMS at http://www.regulations.gov.

III. References

The following references are on display in the Division of Dockets Management (see ADDRESSES) and may be seen by interested persons between 9 a.m. and 4 p.m., Monday through Friday. (FDA has verified the Web site addresses, but FDA is not responsible for any subsequent changes to the Web sites after this document publishes in the Federal Register.)

Dated: January 12, 2009.

Jeffrey Shuren,
Associate Commissioner for Policy and Planning.

National Advisory Council on Migrant Health; Notice of Meeting

In accordance with section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92–463), notice is hereby given of the following meeting:

**Name:** National Advisory Council on Migrant Health.

**Dates and Times:** February 9, 2009, 8:30 a.m. to 5 p.m.; February 10, 2009, 8:30 a.m. to 5 p.m.

**Place:** The Parklawn Building, Twinbrook Room, 3rd Floor, 5600 Fishers Lane, Rockville, Maryland 20857, Telephone: (301) 594–4303, Fax: (301) 443–0248.

**Status:** The meeting will be open to the public.

Purpose: The purpose of the meeting is to discuss services and issues related to the health of migrant and seasonal farmworkers and their families and to formulate recommendations for the Secretary of Health and Human Services.

Agenda: The agenda includes an overview of the Council’s general business activities. The Council will also hear presentations from experts on farmworker issues, including the status of farmworker health at the local and national levels. Agenda items are subject to change as priorities indicate.

For Further Information Contact: Gladys Cate, Office of Minority and Special Populations, Bureau of Primary Health Care, Health Resources and Services Administration, 5600 Fishers Lane, Maryland 20857; telephone (301) 594–0367.

Wendy Ponton, Director, Office of Management.

National Institutes of Health

Government-Owned Inventions; Availability for Licensing

**AGENCY:** National Institutes of Health, Public Health Service, HHS.

**ACTION:** Notice.

**SUMMARY:** The inventions listed below are owned by an agency of the U.S. Government and are available for licensing in the U.S. in accordance with 35 U.S.C. 207 to achieve expeditious commercialization of results of federally-funded research and development. Foreign patent applications are filed on selected inventions to extend market coverage for companies and may also be available for licensing.

**ADDRESSES:** Licensing information and copies of the U.S. patent applications listed below may be obtained by writing to the indicated licensing contact at the Office of Technology Transfer, National Institutes of Health, 6011 Executive Boulevard, Suite 325, Rockville, Maryland 20852–3804; telephone: 301/496–7057; fax: 301/402–0220. A signed Confidential Disclosure Agreement will be required to receive copies of the patent applications.

Mice With a Conditional LoxP-Flanked Glucosylceramide Synthase Allele Controlling Glycosphingolipid Synthesis

**Description of Technology:** Glycosphingolipids are organizational building blocks of plasma membranes that participate in key cellular
functions, such as signaling and cell-to-cell interactions. Glucosylceramide synthase—encoded by the Ugcg gene—controls the first committed step in the major pathway of glycosphingolipid synthesis. Global disruption of the Ugcg gene in mice is lethal during gastrulation. The inventors have established a Ugcg allele flanked by loxp sites (floxed). When cre recombinase was expressed in the nervous system under control of the nestin promoter, the floxed gene underwent recombination, resulting in a substantial reduction of Ugcg expression and of glycosphingolipid ganglio-series levels. The mice deficient in Ugcg expression in the nervous system show a striking loss of Purkinje cells and abnormal neurologic sphingolipid behavior.

The Research Tools available are mice with a floxed Ugcg allele that can be deleted in a conditional manner. These mice carrying floxed Ugcg alleles will be useful for delineating the functional roles of glycosphingolipid synthesis in the nervous system and in other physiologic systems.

**Applications**
- Study of the functional roles of glycosphingolipid synthesis in the nervous system and other physiologic systems.
- The floxed Ugcg allele will facilitate analysis of the function of glycosphingolipids in development, physiology, and in diseases such as diabetes and cancer.

**Licensing Status:** Available for licensing under a Biological Materials license agreement.

**Licensing Contact:** Suryanarayana (Sury) Vepa, PhD, J.D.; 301–435–5020; vepas@mail.nih.gov.

**Collaborative Research Opportunity:** The NIDDK Genetics of Development and Disease Branch is seeking statements of capability or interest from parties interested in collaborative research to further develop, evaluate, or commercialize the sphingolipid metabolism in physiology and disease. Please contact Dr. Proia at proia@nih.gov for more information.

**Mutant Nuclear Orphan Receptor for Drug Metabolism Assays**

**Description of Technology:** The constitutively active nuclear orphan receptor (CAR) activates transcription of genes encoding various drug-metabolizing enzymes, such as cytochrome P450, in response to drug exposure. While the direct activation of CAR in response to various drugs has been observed in vivo, CAR is always active in cell-based transfection assays, even in the absence of activating drugs. This constitutive activity of CAR makes it difficult to perform accurate in vitro assays to measure drug metabolism.

The NIH has obtained patent protection for modified CAR proteins that can be directly activated by drugs in vitro. This technology may potentially be used in the development of more efficient and cost-effective cell-based drug metabolism assays.

**Applications:** Development of improved in vitro assays to measure drug metabolism.

**Inventors:** Masahiko Negishi et al. (NIH).

**Publications**

4. **Licensing Status:** Available for exclusive and non-exclusive licensing.
5. **Licensing Contact:** Tara L. Kirby, PhD; 301–435–4426; tarak@mail.nih.gov.
