

functional analysis, structured interviews, behavioral observations, and surveys. The functional analysis will involve the review of documents and discussions with mine staff in order to gain an understanding of the organizations' intent with regard to the behaviors that contribute to safety culture. After the functional analysis has been conducted, interviews with different positions across the organization will be conducted. The interviews will provide information about the employees' perceptions regarding the values of the organization with regard to the behaviors important to safety. At the end of the interview, interviewees will be asked to complete 4 behavioral anchored rating scales on topics discussed during the interview. This tool provides the interviewee with

another way to express their opinions and attitudes about some of the behaviors important to safety culture. Additionally, behavioral observations will be conducted of activities such as shift turnovers, training, meetings, and responses to events to gain an understanding of the organization's behaviors in real time. Finally, an anonymous survey will be administered which provides a quantitative and objective way of collecting information about the organizational behaviors important to safety culture.

The use of multiple methods to assess safety culture is a key aspect to the methodology. After all of the information has been gathered, a variety of statistical and qualitative analyses are conducted on the data to obtain conclusions with respect to the mine's

safety culture. The results from these analyses will be presented in a report describing the status of the behaviors important to safety culture at that mine.

This project will provide recommendations for the enactment of new safety practices or the enhancement of existing safety practices across the underground coal mining industry. This final report will present a generalized model of a positive safety culture for underground coal mines that can be applied at individual mines. In addition, all study measures and procedures will be available for mines to use in the future to evaluate their own safety cultures.

There is no cost to respondents other than their time.

ESTIMATED ANNUALIZED BURDEN HOURS

Phase	Number of respondents	Number of responses per respondent	Average burden per response (in hours)	Total burden (in hours)
Survey; year one	500	1	20/60	167
Interviews, year one	100	1	1	100
Survey; year two	400	1	20/60	133
Interviews, year two	80	1	1	80
Total				480

Dated: March 25, 2009.

Maryam I. Daneshvar,

Acting Reports Clearance Officer, Centers for Disease Control and Prevention.
