SUPPLEMENTARY INFORMATION:

I. Abstract

The Advance Monthly Retail Trade Survey (MARTS) provides an early indication of monthly retail sales at the United States level. MARTS also provides estimates of monthly sales of food service establishments and drinking places. The Bureau of Economic Analysis (BEA) uses the data as critical inputs to the calculation of Gross Domestic Product (GDP). Policymakers such as the Federal Reserve Board need to have the timeliest estimates in order to anticipate economic trends and act accordingly. The Council of Economic Advisors (CEA) and other government agencies and businesses use the data to formulate economic policy and make decisions. These estimates have a high BEA priority because of their timeliness. There would be approximately a one-month delay in the availability of these data if the survey were not conducted. Data are collected monthly from small-size, medium-size, and large-size businesses, which are selected using a

stratified random sampling procedure. The MARTS sample is re-selected periodically, generally at two to three year intervals. Small-size and medium-size retailers are requested to participate for those two or three years, after which they are replaced with new panel respondents. Smaller firms have less of a chance for selection due to our sampling procedure. Firms canvassed in this survey are not required to maintain additional records and carefully prepared estimates are acceptable if book figures are not available. There is no change in response burden.

II. Method of Collection

The Census Bureau will collect this information by mail, FAX, and telephone follow-up.
