BILLING CODE 4140-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA-2007-P-0250] (formerly Docket No. 2007P-0341)

Determination That ZOMETA (Zoledronic Acid for Injection), Equivalent to 4 Milligrams Base Per Vial, Lyophilized Powder for Injection, Was Not Withdrawn From Sale for Reasons of Safety or Effectiveness

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) has determined that ZOMETA (zoledronic acid for injection), equivalent to (EQ) 4 milligrams (mg) base/vial, lyophilized

powder for injection, was not withdrawn from sale for reasons of safety or effectiveness. This determination will allow FDA to approve abbreviated new drug applications (ANDAs) for zoledronic acid lyophilized powder for injection, 4-mg base/vial.

FOR FURTHER INFORMATION CONTACT: Nancy Boocker, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, rm. 6244, Silver Spring, MD 20993-0002, 301-796-3601.

SUPPLEMENTARY INFORMATION: In 1984, Congress enacted the Drug Price Competition and Patent Term Restoration Act of 1984 (Public Law 98-417) (the 1984 amendments), which authorized the approval of duplicate versions of drug products approved under an ANDA procedure. ANDA sponsors must, with certain exceptions, show that the drug for which they are seeking approval contains the same active ingredient in the same strength and dosage form as the "listed drug," which is a version of the drug that was previously approved. Sponsors of ANDAs do not have to repeat the extensive clinical testing otherwise necessary to gain approval of a new drug application (NDA). The only clinical data required in an ANDA are data to show that the drug that is the subject of the ANDA is bioequivalent to the listed drug.

The 1984 amendments include what is now section 505(j)(7) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 355(j)(7)), which requires FDA to publish a list of all approved drugs. FDA publishes this list as part of the "Approved Drug Products With Therapeutic Equivalence Evaluations," which is generally known as the "Orange Book." Under FDA regulations, drugs are withdrawn from the list if the agency withdraws or suspends approval of the drug's NDA or ANDA for reasons of safety or effectiveness or if FDA determines that the listed drug was withdrawn from sale for reasons of safety or effectiveness (21 CFR 314.162).

Under 21 CFR 314.161(a)(1), the agency must determine whether a listed drug was withdrawn from sale for reasons of safety or effectiveness before an ANDA that refers to that listed drug may be approved. FDA may not approve an ANDA that does not refer to a listed drug.

ZOMETA (zoledronic acid for injection), EQ 4-mg base/vial, lyophilized powder for injection, is the subject of approved NDA 21-223 held by Novartis Pharmaceuticals Corp.

(Novartis). Zoledronic acid, lyophilized powder for injection, EQ 4-mg base/vial, is indicated for treatment of hypercalcemia of malignancy. It also is indicated for the treatment of patients with multiple myeloma and patients with documented bone metastases from solid tumors, in conjunction with standard antineoplastic therapy. Novartis ceased manufacturing ZOMETA (zoledronic acid for injection), EQ 4 mg-base/vial, lyophilized powder for injection, in May 2003. On September 13, 2007, Kendle International, on behalf of Sun Pharmaceutical Industries Ltd., submitted a citizen petition (Docket No. 2007P-0341/CP1), under 21 CFR 10.30, requesting that the agency determine whether zoledronic acid lyophilized powder for injection, EQ 4-mg base/vial, was withdrawn from sale for reasons of safety or effectiveness.

The agency has determined that ZOMETA (zoledronic acid for injection), EQ 4-mg base/vial, lyophilized powder for injection, was not withdrawn from sale for reasons of safety or effectiveness. The petitioner has identified no data or other information suggesting that zoledronic acid lyophilized powder for injection, 4-mg base/vial, was withdrawn from sale as a result of safety or effectiveness concerns. FDA's independent evaluation of relevant information has uncovered no information that would indicate this product was withdrawn for reasons of safety or effectiveness.

After considering the citizen petition and reviewing agency records, FDA determines that for the reasons outlined previously, ZOMETA (zoledronic acid for injection), EQ 4-mg base/vial, lyophilized powder for injection, was not withdrawn from sale for reasons of safety or effectiveness. Accordingly, the agency will continue to list ZOMETA (zoledronic acid for injection), 4-mg base/vial, lyophilized powder for injection, in the "Discontinued Drug Product List" section of the Orange Book. The "Discontinued Drug Product List" delineates, among other items, drug products that have been discontinued from marketing for reasons other than safety or effectiveness. ANDAs that refer to ZOMETA (zoledronic acid for injection), EQ 4-mg base/vial, lyophilized powder for injection, may be approved by the agency as long as they meet all relevant legal and regulatory requirements for the approval of ANDAs. If FDA determines that the labeling of this drug product should be revised to meet current standards, the agency will advise ANDA applicants to submit such labeling.

Dated: March 7, 2009.

Jeffrey Shuren,

Associate Commissioner for Policy and Planning.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Government-Owned Inventions; Availability for Licensing

AGENCY: National Institutes of Health, HHS.

ACTION: Notice.

SUMMARY: The inventions listed below are owned by an agency of the U.S. Government and are available for licensing in the U.S. in accordance with 35 U.S.C. 207 to achieve expeditious commercialization of results of Federally-funded research and development. Foreign patent applications are filed on selected inventions to extend market coverage for companies and may also be available for licensing.

ADDRESSES: Licensing information and copies of the U.S. patent applications listed below may be obtained by writing to the indicated licensing contact at the Office of Technology Transfer, National Institutes of Health, 6011 Executive Boulevard, Suite 325, Rockville, Maryland 20852-3804; telephone: 301/496-7057; fax: 301/402-0220. A signed Confidential Disclosure Agreement will be required to receive copies of the patent applications.

Insect Salivary Proteins as Potent Adjuvants for Enhancing Immune Responses

Description of Technology: This invention relates to the discovery that specific sand fly salivary proteins have marked effects on the outcome of Leishmania infection. These proteins have the ability to stimulate strong Th1 and Th2 responses. The Th1 responses with one protein, PpSP15, result in immune protection while the Th2 responses to another protein, PpSP44, exacerbate infection. The protective protein enhanced a specific immune response to the infection, suggesting that it acts as an adjuvant to alter the environment and presentation of the parasite antigens.

These immunogenic salivary proteins, capable of driving Th1 or Th2 responses, can be used as adjuvants in vaccine development for a broad spectrum of diseases that require

different immune responses. They may therefore be used to enhance immune responses to pathogens other than Leishmania parasites. They are also very potent in their effect, and small doses are sufficient to elicit a strong immune response. This potency can reduce the need to use chemical adjuvants, which often require large amounts of material and can have deleterious side effects.

Applications:

- Vaccine for Leishmania parasite and other pathogenic infections.
- Potent adjuvant for a broad spectrum of diseases.

Advantages: Efficient, potent, and less toxic than many chemical adjuvants.

Development Status: Early Stage.

Market:

- 88 countries with an estimated 2 million people affected each year.
- Estimated 350 million at risk worldwide.

Inventors: Jesus G. Valenzuela *et al.* (NIAID).

Publication: F Oliveira, PG Lawyer, S Kamhawi, JG Valenzuela. Immunity to distinct sand fly salivary proteins primes the anti-Leishmania immune response towards protection or exacerbation of disease. PLoS Negl Trop Dis. 2008 Apr 16;2(4):e226.

Patent Status: U.S. Provisional Application No. 61/089,884 filed 08 Aug 2008 (HHS Reference No. E-303-2008/0-US-01).

Licensing Status: Available for licensing.

Licensing Contact: Jeffrey A. James PhD; 301-435-5474; jeffreyja@mail.nih.gov.

Collaborative Research Opportunity: The NIAID, Office of Technology Development is seeking statements of capability or interest from parties interested in collaborative research to further develop, evaluate, or commercialize the Insect Salivary Proteins as potent immune response adjuvants. Please contact Charles Rainwater at crainwater@niaid.nih.gov or 301/496-2644 for more information.

Anti-Cancer Oligodeoxynucleotides

Description of Technology: A majority of human cancers originate from epithelial tissue. A common cancer of epithelial cell origin is non-melanoma skin cancer (NMSC), including basal cell carcinoma (BCC) and squamous cell carcinoma (SCC), with more than seven hundred thousand (700,000) new cases diagnosed each year in the United States alone. BCC is rarely life-threatening because it is slow growing and is mostly localized. Unlike BCC, SCC metastasizes at a rate of two (2) to six (6) percent over several years after the initial diagnosis. A highly malignant form invades and

destroys tissue, and then metastasizes, initially to a regional lymph node before more distant organs such as the lungs or brain are affected. SCC is commonly encountered in a number of epithelial tissues, including the oral cavity, esophagus, larynx, bronchi, intestines, colon, genital tract, and skin.

This application relates to suppressive CpG oligodeoxynucleotides (ODNs). This application claims suppressive ODN compositions and their use to prevent or delay the formation of a tumor, reducing the risk of developing a tumor, treating a tumor, preventing conversion of a benign to a malignant lesion, or preventing metastasis. Topical application of the ODNs of this invention in preclinical studies resulted in significantly fewer animals developing papillomas and fewer papillomas/animal. The invention also relates to use of suppressive ODNs to prevent/delay cancer when administered systemically as well as locally.

Application: Development of anti-cancer vaccines, therapeutics and diagnostics.

Development Status: ODNs have been synthesized and preclinical studies have been performed.

Inventors: Dennis M. Klinman and Hidekazu Ikeuchi (NCI)

Patent Status: U.S. Provisional Application No. 61/119,998 filed 04 Dec 2008 (HHS Reference No. E-296-2008/0-US-01).

Licensing Status: Available for licensing.

Licensing Contact: Peter A. Soukas, J.D.; 301-435-4646; soukasp@mail.nih.gov.

Collaborative Research Opportunity: The National Cancer Institute, Laboratory of Experimental Immunology, is seeking statements of capability or interest from parties interested in collaborative research to further develop, evaluate, or commercialize this technology. Please contact John D. Hewes, PhD at 301-435-3121 or hewesj@mail.nih.gov for more information.

Neutralization of Hepatitis C Virus (HCV)

Description of Technology: Available for licensing and commercial development are compositions and methods for preventing and/or treating infection caused by hepatitis C virus (HCV). The invention is based on mapping studies conducted by the inventors of two epitopes within HCV E2: epitope I and epitope II. It has been discovered that epitope I is involved in virus neutralization but that epitope II mediates antibody interference,
