Proposed Project: Request for Applicant Background Survey—OMB No. Extension-0990-0208 Assistant Secretary for Administration and Management.

Abstract: The Applicant Background Survey form will be used for the next three years by the Operating Divisions (OPDIVs). The major sub-organizations

within the Department of Health and Human Services (HHS), will collect and analyze data on race, sex, national origin, and disability from applicants for employment. Information will be collected by each of the personnel offices in the Department. The form will be used routinely by the OPDIVs when recruiting for all positions, including senior level positions and for selected job series where workforce analysis has shown evidence of low representation of minorities, women, or persons with disabilities. The results of the collection will assist the Department to determine if present recruitment sources yield qualified minority and female applicants and applicants with disabilities as required by EEOC MD 715.

SUPPLEMENTARY INFORMATION:

Proposed Project

"Coordinating Care across Primary Care and Specialty Care Practices." AHRQ proposes an evaluation of the redesign of the transitions of care between primary care and specialty care services. The purpose of the redesign is to remedy inefficiencies in the current referral processes that threaten care quality and safety, and system

efficiency. This redesign is being implemented at the Boston Medical Center (BMC), and two affiliated health centers. The evaluation will be conducted for AHRQ by its contractor, the Boston University School of Public Health (BUSPH).

Care coordination has been identified by the Institute of Medicine (IOM) as a key strategy with potential to improve the effectiveness, safety and efficiency of the health care system. At the same time, care coordination, particularly in transitions among sites of care, is often lacking. Research shows that problems in coordination of care and common failures in patients' transitioning between and among systems typically create serious quality concerns in many settings. Individuals moving across systems of care and between care providers are vulnerable to fragmented and disjointed care (Coleman *et al.*, 2004). Uncoordinated and fragmented transitions can lead to a wide range of costly problems and threats to patient safety including greater use of hospital and emergency services (Coleman *et al.*, 2004), ordering and completion of redundant tests (Coleman & Berenson, 2004), prescription and medication errors and use of poly-pharmacy by multiple providers (Coleman & Berenson, 2004). The end result is often confusion about conflicting care plans and lack of follow-up care. The aim of
