Marine Mammal Protection Act; Stock Assessment Report

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of availability of draft revised marine mammal stock assessment reports for two stocks of West Indian manatee; request for comments.

SUMMARY: In accordance with the Marine Mammal Protection Act of 1972, as amended (MMPA), and its implementing regulations, we, the U.S. Fish and Wildlife Service (Service), have developed a draft revised marine mammal stock assessment report (SAR) for each of the two West Indian manatee stocks in the southeastern United States and Puerto Rico: The Florida manatee (Trichechus manatus latirostris) stock and the Puerto Rico stock of Antillean manatee (Trichechus manatus manatus). Both are available for public review and comment.

DATES: We must receive comments by September 10, 2009.

ADDRESSES: To obtain the SARs for either or both of the West Indian manatee subspecies, and to submit comments, see Document Availability and Public Comment, respectively, under SUPPLEMENTARY INFORMATION.

FOR FURTHER INFORMATION CONTACT: West Indian Manatee in Florida: Jim Valade, (904) 731–3336 (telephone) or northflorida@fws.gov (e-mail). West Indian Manatee in Puerto Rico: Carlos Diaz, (787) 851–7297 (telephone) or Carlos_Diaz@fws.gov (e-mail).

SUPPLEMENTARY INFORMATION:

Background

Under the MMPA (16 U.S.C. 1361 et seq.) and its implementing regulations in the Code of Federal Regulations (CFR) at 50 CFR part 18, we regulate the taking, possession, transportation, purchasing, selling, offering for sale, exporting, and importing of marine mammals. One of the MMPA’s goals is to ensure that stocks of marine mammals occurring in waters under U.S. jurisdiction do not experience a level of human-caused mortality and serious injury that is likely to cause the stock to be reduced below its optimum sustainable population level (OSP). OSP is defined as “the number of animals which will result in the maximum productivity of the population or the...
species, keeping in mind the carrying capacity of the habitat and the health of the ecosystem of which they form a constituent element.”

To help accomplish the goal of maintaining marine mammal stocks at their OSPs, section 117 of the MMPA requires us and the National Marine Fisheries Service (NMFS) to prepare a SAR for each marine mammal stock that occurs in waters under U.S. jurisdiction. A SAR must be based on the best scientific information available; therefore, we prepare it in consultation with established regional scientific review groups. Each SAR must include: (1) A description of the stock and its geographic range; (2) a minimum population estimate, maximum net productivity rate, and current population trend; (3) an estimate of human-caused mortality and serious injury; (4) a description of commercial fishery interactions; (5) a categorization of the status of the stock; and (6) an estimate of the potential biological removal (PBR) level. The PBR is defined as “the maximum number of animals, not including natural mortalities, that may be removed from a marine mammal stock while allowing that stock to reach or maintain its OSP.” The PBR is the product of the minimum population estimate of the stock (N\text{min}); one-half the maximum theoretical or estimated net productivity rate of the stock at a small population size (R\text{max}); and a recovery factor (F\text{r}) of between 0.1 and 1.0, which is intended to compensate for uncertainty and unknown estimation errors.

Section 117 of the MMPA also requires us and NMFS to review the SARs (a) at least annually for stocks that are specified as strategic stocks, (b) at least annually for stocks for which significant new information is available, and (c) at least once every 3 years for all other stocks.

A strategic stock is defined in the MMPA as a marine mammal stock (a) for which the level of direct human-caused mortality exceeds the PBR; (b) which, based on the best available scientific information, is declining and is likely to be listed as a threatened species under the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 et seq.; ESA), within the foreseeable future; or (c) which is listed as a threatened or endangered species under the ESA, or is designated as depleted under the MMPA.

The following table summarizes the information we are now making available in the draft revised SARs for the Florida and Puerto Rico stocks of the West Indian manatee, listing each stock’s N\text{min}, R\text{max}, F\text{r}, PBR, annual estimated human-caused mortality and serious injury, and status. After consideration of any public comments we receive, we will revise the SARs for one or both subspecies, as appropriate. We will publish a notice of availability and summary of the final SARs, including responses to comments we receive.
