3. Reporting

At the end of your project period, you must submit a final performance report, including financial information, as directed by the Secretary. If you receive a multi-year award, you must submit an annual performance report that provides the most current performance and financial expenditure information as directed by the Secretary in 34 CFR 75.118. The Secretary may also require more frequent performance reports under 34 CFR 75.720(c). For specific requirements on reporting, please go to <http://www.ed.gov/fund/grant/apply/appforms.html>.

4. Performance Measures

Under the Government Performance and Results Act of 1993, the following measures will be used by the Department in assessing the performance of this program:

(1) The percentage of funded grantees reporting project dissemination to others; and

(2) The percentage of funded projects reporting institutionalization on their home campuses.

If funded, you will be asked to collect and report data on these measures in your project's annual performance report (34 CFR 75.590). Applicants are also advised to consider these two measures in conceptualizing the design, implementation, and evaluation of the proposed project because of their importance in the application review process. Collection of data on these measures should be a part of the project evaluation plan, along with measures of progress on goals and objectives that are specific to your project.

June 11, 2009.

On April 27, 2009, Hydrodynamics, Inc. filed an application for a preliminary permit, pursuant to section 4(f) of the Federal Power Act, proposing to study the feasibility of the Quake Lake Hydroelectric Project, which would be located at Quake Lake on the Madison River, in Madison and Gallatin Counties, Montana. The project would be located on U.S. Forest Service and private lands. The proposed project would consist of the following:

(1) An existing 1,380-foot-long, 210-foot-high landslide-formed earthen dam; (2) an existing reservoir having a surface area of 636 acres and a storage capacity of approximately 50,000 acre-feet at the normal water surface elevation of 6,395 feet mean sea level; (3) a new 30-foot by 30-foot, 50-foot-high submerged concrete intake; (4) a new 9-foot-diameter, 3,200-foot-long penstock; (5) a new powerhouse containing two generating units with a combined installed capacity of 5.05 megawatts; (6) a new tailrace discharging flows into the Madison River; (7) a new substation; (8) a new 12.5-kilovolt, 4-mile-long transmission line; and (9) appurtenant facilities. The proposed project would have an average annual generation of 40 gigawatt-hours.
