SUPPLEMENTARY INFORMATION:

Introduction

With this notice, we continue the CCP process for Rappahannock River Valley NWR, which was started with the notice of intent we published in the **Federal Register** (70 FR 65931) on November 1, 2005. We prepared the draft CCP in compliance with the National Environmental Policy Act of 1969 and the National Wildlife Refuge System Administration Act of 1966, as amended by the National Wildlife Refuge System Improvement Act of 1997. This refuge is the newest of the four refuges that comprise the Eastern Virginia Rivers NWR Complex. The other three are the James River, Plum Tree Island, and Presquile NWRs.

Rappahannock River Valley NWR, currently 7,711 acres, was established in 1996 to conserve and protect fish and wildlife resources, including endangered and threatened species, and wetlands. Refuge habitats include freshwater tidal marsh, forested swamp, upland deciduous forest, mixed pine forest, and managed grassland. Two Federally listed species are found on the refuge, the endangered shortnose sturgeon (*Acipenser brevirostrum*) and threatened Sensitive joint-vetch (*Aeschynomene virginica*). The State of Virginia's largest wintering population of bald eagles is located within the refuge boundary. Neotropical migratory songbirds, shorebirds, raptors, and marsh birds also rely on the Rappahannock River corridor during
