Title: Trade Secret Claims for Emergency Planning and Community Right-to-Know Act (Renewal).

ICR numbers: EPA ICR No. 1428.08, OMB Control No. 2050-0078.

ICR Status: This ICR is scheduled to expire on August 31, 2009. Under OMB regulations, the Agency may continue to conduct or sponsor the collection of information while this submission is pending at OMB. An Agency may not conduct or sponsor, and a person is not required to respond to, a collection of information, unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in title 40 of the CFR, after appearing in the **Federal Register** when approved, are listed in 40 CFR part 9, are displayed either by publication in the **Federal Register** or by other appropriate means, such as on the related collection instrument or form, if applicable. The display of OMB control numbers in certain EPA regulations is consolidated in 40 CFR part 9.

Abstract: This information collection request pertains to trade secrecy claims submitted under section 322 of the Emergency Planning and Community Right-to-Know Act of 1986 (EPCRA), also known as Title III of SARA, the Superfund Amendments and Reauthorization Act. Title III contains provisions requiring facilities to report to State and local authorities, and EPA, the presence, use and release of extremely hazardous substances (described in sections 302 and 304) and hazardous and toxic chemicals (described in sections 311, 312 and 313 respectively). Section 322 of Title III allows a facility to withhold the specific chemical identity from these Title III reports if the facility asserts a claim of trade secrecy for that chemical identity. The provision establishes the requirements and procedures that facilities must follow to request trade secrecy treatment of chemical identities, as well as the procedures for submitting public petitions to the Agency for review of the "sufficiency" of trade secrecy claims. EPA published the trade secrecy regulations on July 29, 1988 (58 FR 28772), codified in 40 CFR part 350.

Burden Statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 9.5 hours per response. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements which have subsequently changed; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

Respondents/Affected Entities: Entities that submit trade secret claims, including the manufacturing sector, coal and metal mining, electric utilities, construction, dry cleaners, chemical and paper manufacturers.

Estimated Number of Respondents: 327.

Frequency of Response: Annually.
Estimated Total Annual Hour Burden: 3,106 hours.

Estimated Total Annual Cost: \$195,447, which includes no annualized capital or O&M costs.

Changes in the Estimates: There is a decrease of 1,552 hours in the total estimated burden currently identified in the OMB Inventory of Approved ICR Burdens. This decrease in burden is due to the decrease in the number of facilities that EPA estimates will make trade secret claims over the next three years covered by this ICR.

Dated: August 4, 2009.

John Moses,

Director, Collection Strategies Division.

Abstract: The National Emission Standards for Hazardous Air Pollutants (NESHAP) for Mercury, published at 40 CFR part 61, subpart E, were proposed on December 7, 1971, promulgated on April 6, 1973, and amended on October 14, 1975, March 19, 1987, and October 17, 2000.

These standards apply to stationary sources, which process mercury ore to recover mercury, use mercury chlor-alkali cells to produce chlorine gas and alkali metal hydroxide, and either incinerate or dry wastewater treatment plant sludge. Approximately 107 sources (100 sludge incineration and drying plants and 7 mercury-cell chlor-alkali plants) are currently subject to the standard; and no additional sources are expected to become subject to the standard in the next three years. Mercury is the pollutant regulated under this standard. This information is being collected to ensure compliance with 40 CFR part 61, subpart E.

Owners or operators of affected facilities must make the following one-time only notification; date of construction or reconstruction, anticipated and actual dates of startup; physical or operational change to an existing facility; date of initial performance test; and results of initial performance test. These facilities must also maintain records of performance test results, and startup, shutdowns, and malfunctions. In order to ensure compliance with the standards, adequate recordkeeping and reporting is necessary. This information enables the Agency to identify the sources subject to the standard, ensure initial compliance with emission limits, and verify continuous compliance with the standard and all other information needed to determine compliance with the applicable standards.

Any owner or operator subject to the provisions of this subpart must maintain a file of these measurements, and retain the file for at least two years following the collection of such measurements, maintenance reports, and records. All reports are sent to the delegated state or local authority. In the event that there
