

Service Act, establishes the Center for Mental Health Services (CMHS), Substance Abuse and Mental Health Services Administration (SAMHSA), and authorizes the CMHS to conduct surveys with respect to mental health. To monitor the prevalence of children and youth with mental health problems, CMHS and the National Institute of Mental Health (NIMH), through a reimbursable agreement with the NCHS have funded questions on children's mental health on the National Health Interview Survey (NHIS).

One component of the NHIS is the short Strengths and Difficulties Questionnaire (short SDQ), a module that has obtained data on the mental health of children aged 4–17 years since 2001. As part of its mission, CMHS has undertaken the task of improving its methods for providing national

estimates related to child mental health, specifically by conducting studies that determine validity and appropriate cut-points for measuring serious psychological distress in adults. To ensure that the short SDQ is a valid measure of child mental health, the proposed study calibrates the SDQ on the NHIS to a standard psychiatric measure. Highly trained clinical interviewers will administer, via telephone, the Child and Adolescent Psychiatric Assessment (CAPA) or the Pre-School Age Psychiatric Assessment (PAPA) to the parents of a sample of children aged 4–17 years identified in the NHIS as having mental health problems. Children aged 9–17 will also be interviewed using Child and Adolescent Psychiatric Assessment (CAPA). Clinical interviewers will also administer these assessments to a

suitable control group of parents and children. One part of this voluntary study will investigate the use of incentives which may be paid to all parents, and another incentive may be paid to all parents who complete the clinical interview. A 24 month clearance is being sought to conduct this study.

Data collected in the follow-up interviews will then be used to calibrate the short SDQ as it is used in the NHIS. Data will not be used to produce national estimates.

This study includes a pilot study of 36 children and 50 parents to test the procedures and methods, including the necessity of an incentive, followed by a full survey of approximately 400 parents and 300 children.

There is no cost to respondents other than their time.

ESTIMATED ANNUALIZED BURDEN TABLE

Type of survey	Type of respondent	Number of respondents	Number of responses per respondent	Average burden per response in hours	Total burden in hours
Pilot	Parents	25	1	40/60	17
	Children	18	1	28/60	8
Full Calibration	Parents	200	1	40/60	133
	Children	150	1	28/60	70
Total					228

Dated: September 2, 2009.
