SUPPLEMENTARY INFORMATION:**I. Abstract**

The U.S. Census Bureau plans to continue to conduct the Survey of State Research and Development Expenditures to measure research and development supported and performed by State governments in the United States. This survey is a joint effort between the Census Bureau and the National Science Foundation (NSF).

The NSF Act of 1950 includes a statutory charge to "provide a central clearinghouse for the collection, interpretation, and analysis of data on scientific and engineering resources and to provide a source of information for policy formulation by other agencies in the Federal Government." Under the aegis of this legislative mandate, NSF and its predecessors have sponsored surveys of research and development since 1953, including the Survey of Industrial Research and Development and the Survey of State Research and Development Expenditures.

Items on the survey form include research and development expenditures according to the source of funding, by performer of the work (internal and external to State agencies), and by character (*i.e.*, basic, applied, or developmental). Final results produced by NSF contain State and National estimates useful to a variety of data users interested in research and development performance including: the National Science Board; the Office of Management and Budget; the Office of Science and Technology Policy and other science policy makers; institutional researchers; and private organizations.
