Expiration Date: 08/31/2010.

Type of Request: Extension, without change, of a currently approved collection.

Abstract: The Food and Nutrition Service (FNS) developed the Education and Administrative Reporting System (EARS) for the nutrition education (SNAP-Ed) component of the Supplemental Nutrition Assistance Program (SNAP), which is provided for in Section 11 of the Food and Nutrition Act of 2008 (7 U.S.C. 2020 (f)(3)(B)(ii)). In 2003, the Agency convened a workgroup of diverse stakeholders to assist with this task, including people from the State, local, and federal levels, as well as academia.

The EARS form was approved by the Office of Management and Budget (OMB) in Fiscal Year (FY) 2007. The first phase of EARS implementation, launched in FY 2008, required SNAP State agencies to report on financial questions #9 and #10 on the EARS form. Full implementation of all applicable EARS questions is required of SNAP State agencies by FY 2010.

EARS provides uniform data and information about the nutrition education activities of all participating States across the country. Data collected on the EARS form includes demographic characteristics of participants receiving nutrition education benefits, information about education topics and strategies, and use of resources. The EARS form is designed as an annual report that SNAP State agencies submit using the Food and Nutrition Service (FNS) web-based Food Program Reporting System (FPRS). FPRS is available to SNAP State agencies between October 15 and December 30 of each year for the submission of EARS data for the prior FY's nutrition education activities.

Kings River Experimental Watershed Forest Health and Research Project

AGENCY: Sierra National Forest, Forest Service, USDA.

ACTION: Notice of intent to prepare an environmental impact statement.

SUMMARY: The Forest Service will prepare a Kings River Experimental Watershed Forest Health and Research Project (KREW Project) Environmental Impact Statement (EIS). The EIS will evaluate the environmental effects of the KREW Project which is designed to treat portions of the Kings River watershed to improve forest health and to examine the short- and long-term effects of these treatments. The research will lead to information that will be instrumental in future land management planning for the Sierra National Forest (SNF) and other Sierra Nevada forests.

DATES: Comments concerning the scope of the analysis must be received by November 13, 2009. The draft environmental impact statement is expected December 2009 and the final environmental impact statement is expected April 2010.

ADDRESSES: Send written comments to Judi Tapia, SNF, Supervisor's Office, 1600 Tollhouse Road, Clovis, CA 93611, Attn: KREW Project.

Comments may also be sent via e-mail to jetapia@fs.fed.us, or via facsimile to 559-294 4809.

It is important that reviewers provide their comments at such times and in such a way that they are useful to the Agency's preparation of the EIS. We intend to use comments received from the public to help formulate our draft EIS so please provide any suggestions or concerns prior to the close of the comment period.

Comments received in response to this solicitation, including names and

addresses of those who comment, will be part of the public record for this proposed action. Comments submitted anonymously will be accepted and considered, however.

FOR FURTHER INFORMATION CONTACT: For research information, contact Carolyn Hunsaker, Ecologist, Pacific Southwest Research Station (PSW), available by phone at 559-323-3211 or via e-mail at chunsaker@fs.fed.us. For forest management information, contact Judi Tapia at 559-297-0706 extension 4938 or via e-mail at: jetapia@fs.fed.us. Information regarding the KREW Project EIS can be found on the SNF Web site located at: <http://www.fs.fed.us/sierraprojects/>.

Individuals who use telecommunication devices for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1-800-877-8339 between 8 a.m. and 8 p.m., Eastern Time, Monday through Friday.

SUPPLEMENTARY INFORMATION: The Forest Service routinely conducts land management activities to help restore forests to a healthy, diverse, fire-resilient condition by reducing stand densities and fuel loads. Such management activities involve thinning forests to reduce competition among trees for water, nutrients, and sunlight; to reduce the continuity of fuels; and to protect and/or reestablish a resilient, diverse forest ecosystem.

PSW, in collaboration with the SNF, propose to complete a land management project to achieve forest health goals, part of which is the subject of research to assess the response of the ecosystem to these management practices. The forest management practices are designed for ecological restoration: for example, to reduce the effects of uncharacteristic wildfire, drought, invasive species and insect attack while providing habitat for wildlife species including sensitive species such as California spotted owl, Pacific fisher, and Yosemite toad.

The proposed KREW Project activities, implemented under the SNF Land and Resources Management Plan (LRMP) as amended by the 2004 SNF LRMP Amendment, have two coupled components: Component 1, management treatments and Component 2, research to examine ecosystem response to those treatments. The research has been underway since 2000 to instrument the subject watersheds and measure baseline (pre-treatment) ecological response. Upon completion of the forest restoration treatments planned post-treatment data collection will be completed.

The project area encompasses 3,051 acres and has two separate parts: the KREW Providence Unit (1,899 acres) and the KREW Bull Unit (1,152 acres). The KREW Providence Unit is off of the Dinkey Creek Road, adjacent to the Providence Creek Road. The KREW Bull Unit is on Patterson Mountain adjacent to the Ross Crossing Road and includes part of the Teakettle Experimental Forest.

Much is known about vegetative responses to thinning in terms of growth rates, resistance to insect attack, and resulting fire behavior in treated stands. Less is known about physical, biological, and chemical responses to moderate thinning of trees and application of prescribed fire at a watershed scale. The KREW Project research component is a replicated, paired-watershed research area for headwater streams in the southern Sierra Nevada. The KREW Project research addresses both basic and applied science questions regarding sustainable forests for current and future conditions. The KREW Project research component is a formal research project and has a scientist reviewed study plan that is periodically updated (<http://www.psw.fs.fed.us/snrc/water/kingsriver>). The Forest Service already collects data at eight instrumented watersheds on the following topics to meet KREW Project research goals:

- Hydrology.
 - Meteorology.
 - Air quality.
 - Sediment & turbidity.
 - Soils & geomorphology.
 - Water chemistry.
 - Biology.
- Stream macroinvertebrates.
—Algae.
—Riparian & upland vegetation & fuels.
—Yosemite toad.

In June of 2009, the Sierra Nevada Alliance highlighted the need to monitor, protect and restore Sierra Nevada headwater resources. The KREW Project is uniquely positioned to allow researchers to collect data from an area where a particular management practice is applied along with corresponding data from a similar, but untreated area. By conducting various types of thinning and prescribed fire treatments and comparing data from paired areas, the proposed research project is intended to evaluate the watershed-scale effects of management activities designed to create a more sustainable forest in a financially viable way.

Purpose and Need for Action

The KREW Project has two goals: the SNF's goal of forest health treatment for
